Overcoming Roadblocks to Building Hydrogen Fueling Infrastructure

Air Products and Chemicals, Inc./
Marsh Inc.

Drew Eddy, Edward Kiczek, John Lafferty, Ann Padjen

AIR PRODUCTS

Leadership in Hydrogen Fuel Infrastructure

- Worlds largest producer of merchant hydrogen ~50% share
- Active since 1993
  - Built over 75 hydrogen stations
  - Approaching 50,000 fuellings
  - 14 countries
- Strong and broad technology position and responsible for many firsts.
  - Energy Park
  - 350 bar
  - 700bar
  - Class1 div1 dispenser
  - CA Hydrogen Highway

AIR PRODUCTS

Leadership in Hydrogen Fuel Infrastructure

- Turnkey Systems Integrator
- Have at our disposal
  - Methane conversion technologies
  - Gas clean-up technologies
  - Gasification
  - Electrolysis
  - Renewables
- Supplier of the most cost effective molecule to the marketplace

AIR PRODUCTS

Project Development Issues

- Historically has taken 2-3 years to contract a station
  - Adds project costs
  - Delays deployment, lose of momentum
- The transition is developmental NOT commercial. Commercial fuelling is covered by insurance and places liability on station owner/operator.
  - Developing new frontier technology in the public view. Are there still unknowns?
  - Hydrogen fuelling is relatively inexperienced vs. gasoline. Particularly hydrogen above 3000psi
- Inability to agree on Liabilities, Indemnifications and Warranties within traditional comfort zone

AIR PRODUCTS

Path Forward to a Forecourt Model

- Finalized Codes and Standards
  - Basic Codes and Standards are written
  - Component listing needs to occur
  - Experience
  - AP participates on all major code bodies
  - Design to the strictest parameters
- Developing volume applications from which to base risks.
- Numerous independent owners willing to participate with affordable coverage.
- Can this liability be covered through an insurance instrument to share risks.

AIR PRODUCTS

Liability Insurance Landscape

- Marsh
  - Largest insurance broker in the world
  - Access to entire global insurance marketplace
- Search focused on liability insurance for retail distribution of hydrogen (i.e. independent fuel stations)
- Current state of insurance for independent fuel stations is highly fragmented
- There are a few insurers that have some volume (i.e. Nationwide)

AIR PRODUCTS

Liability Insurance Landscape

- There are a few leaders but more followers in the insurance marketplace
- Overall, insurers are very conservative when it comes to emerging risks
- Need for greater understanding of hydrogen risk characteristics, but expectation is this can be overcome
- Some insurers have experience with alternative fuel sources (i.e. ethanol)

AIR PRODUCTS

Market Challenges

- Insurance 101 – what is required to make a risk insurable?
  - Law of large numbers – not enough units (policyholders) to achieve critical mass
  - Predictability of losses – not enough historical/empirical data for financial modeling
  - Spread of risk – reinsurance (one method to spread risk) current treaties typically exclude hydrogen

AIR PRODUCTS

Governmental Assistance with liability insurance marketplace

- **Need**
  - **Fuel station owners lack tools to deal with emerging risks**
- **Precedent**
  - **Vaccine Act, TRIA, etc...**
- **Recommendation for assistance**
  - **Premium Rebate**
  - **Reinsurance “backstop”**
