

# DOE Hydrogen Program Panel Discussion

EERE - Sunita Satyapal, FE- John Litynski, NE- Alison Hahn, SC- Linda Horton, ARPA-E- Scott Litzelman

Hydrogen Annual Merit Review

June 7, 2021

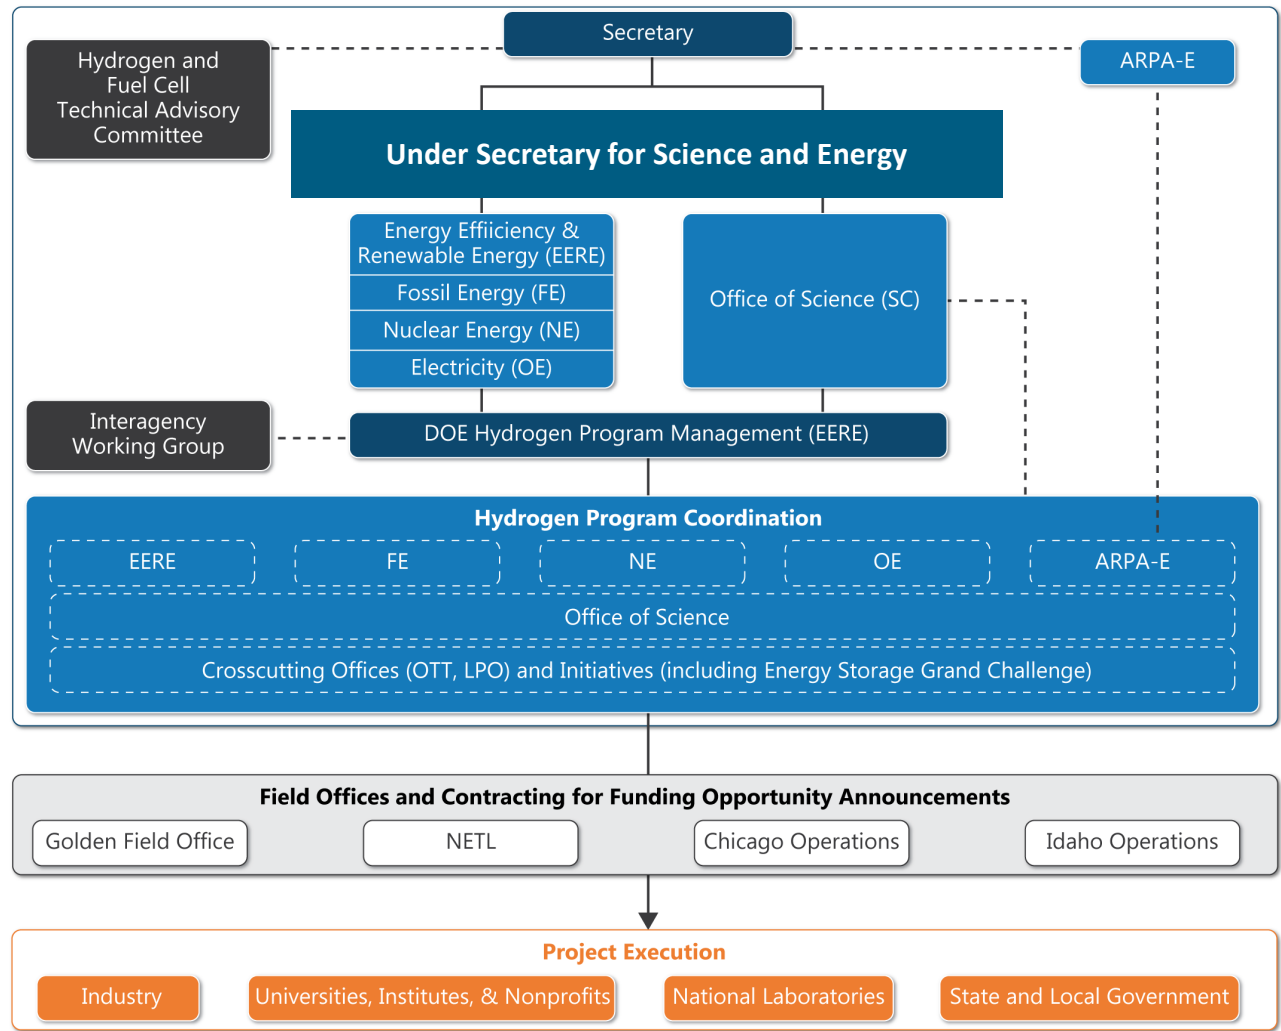

# The DOE Hydrogen Program: An Integrated Approach for Collaboration on Hydrogen Across DOE Offices

The Energy Policy Act (2005) Title VIII and Energy Policy Act of 2020 provide key authorization

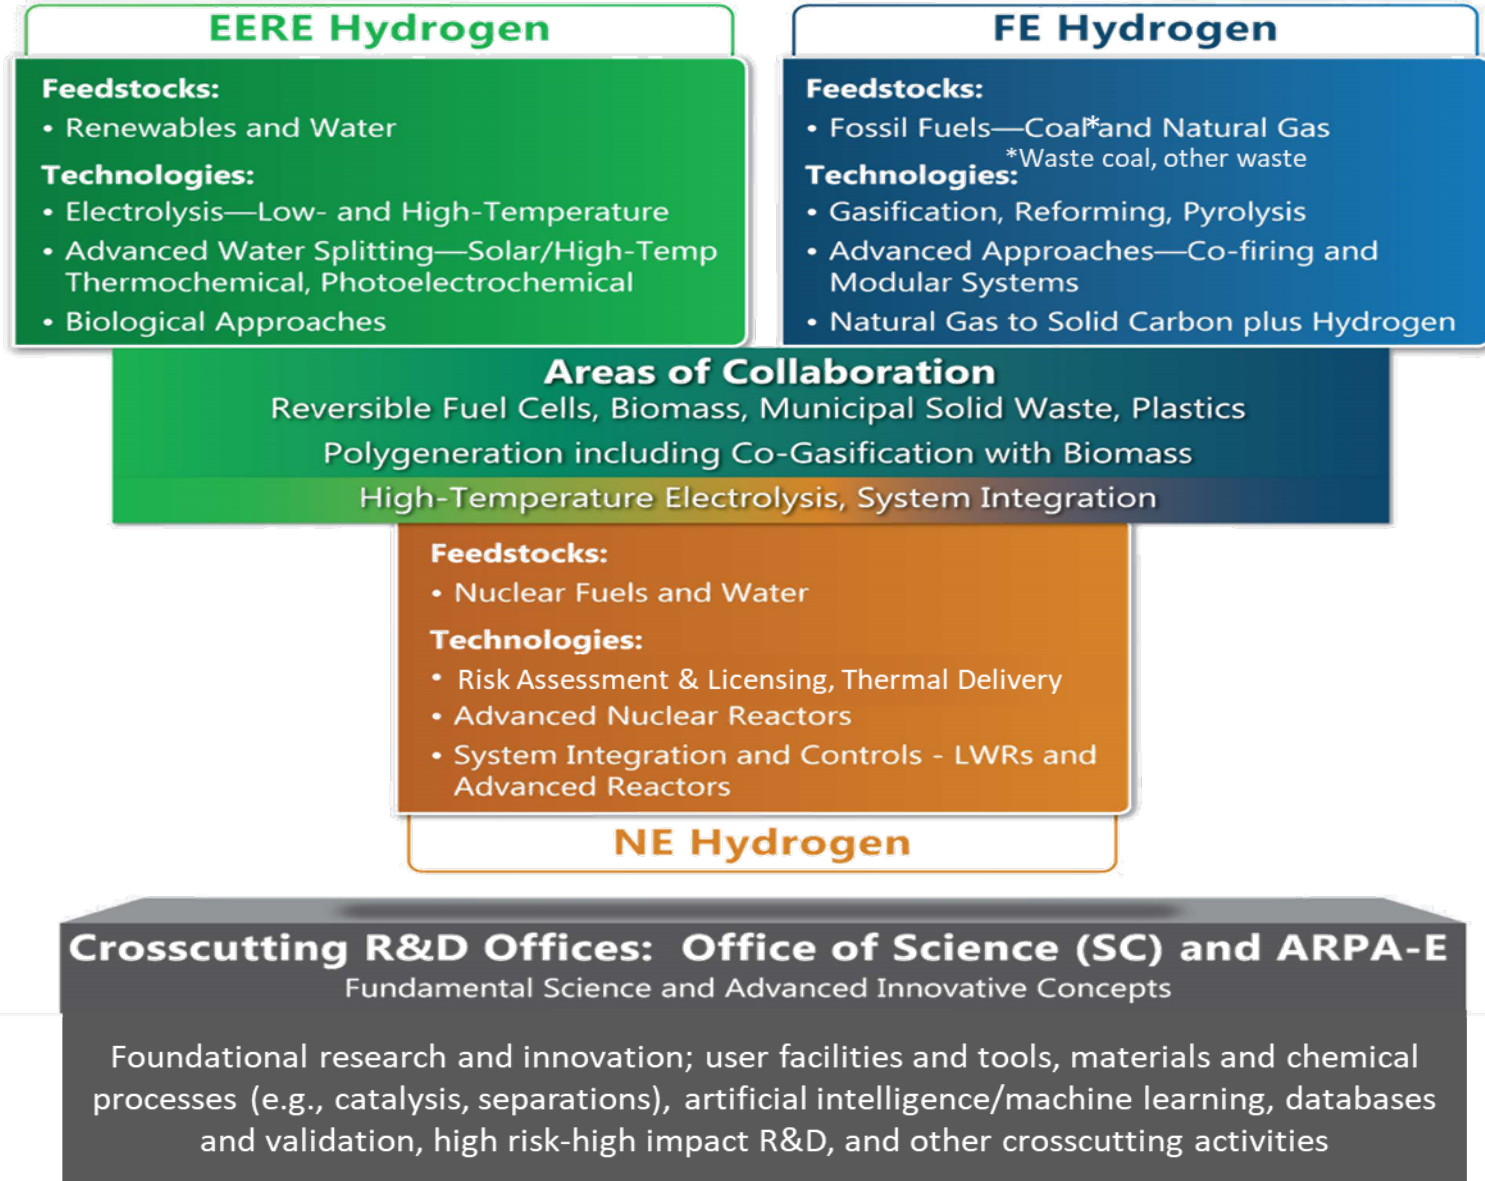

## Hydrogen Program Plan

[www.hydrogen.energy.gov](http://www.hydrogen.energy.gov)

# DOE Hydrogen Program – Collaboration

EERE: Office of Energy Efficiency and Renewable Energy  
FE: Office of Fossil Energy  
NE: Office of Nuclear Energy

# Hydrogen at Scale - A Guiding Framework

DOE's H2@Scale initiative provides an overarching vision for how hydrogen can enable energy pathways across applications and sectors in an increasingly interconnected energy system.

## Priorities

1. Low cost, zero carbon hydrogen generation: \$1 - \$2/kg
2. Low cost, efficient, safe hydrogen delivery and storage
3. End use applications to achieve scale and sustainability, enable emissions reduction and address EJ40 priorities

*Enablers: Workforce development, safety, codes, standards*

Global potential estimated by H<sub>2</sub> Council: \$2.5 trillion, 30 million jobs, 6 GT CO<sub>2</sub> reduction.

# Hydrogen Activities in Fossil Energy (FE)

John Litynski, Deputy Director Advanced Fossil Technology Systems

# Fossil Energy - Hydrogen R&D Investments and Areas

## Key Focus Areas:

- Low-cost, net-zero hydrogen production and utilization technologies, including Turbines, Gasification, Solid Oxide Fuel Cells, and Pre-Combustion R&D

## Future RD&D:

- Carbon-Neutral Hydrogen Production Using Gasification and Reforming Technologies
- Hydrogen Use for Electricity Generation, Fuels, and Manufacturing
- Large Scale Hydrogen Transport Infrastructure
- Large Scale On-site and Geological Hydrogen Storage

## Recent Accomplishments:

- Developed hydrogen combustion fundamentals and analysis tools to enable low NO<sub>x</sub> hydrogen combustor designs and zero carbon power generation. Developing combustors and materials.
- Hydrogen production with 99% CO<sub>2</sub> capture can be achieved with small incremental costs
- Worlds largest clean hydrogen facility (Port Arthur SMR/CCS) operating for 7 years – commercial demo
- Pre-FEED studies completed for clean hydrogen production facility – Shifting to waste coal, biomass, and plastics
- Developed several pre-combustion (CO<sub>2</sub>/H<sub>2</sub>) separation technologies at small pilot scale

# FE Funding and Key Hydrogen Activities

## CCS Demonstration Project

### Air Products Hydrogen Production w/ CCUS

- On going operations since April 2013
- Over 7 million tons CO<sub>2</sub> injected

## FY2021 Hydrogen Related R&D Investments

- **Advanced Energy Systems:**
  - Solid Oxide Fuel Cells - materials, components, systems, reversible SOFC at utility scale;
  - Turbines - 100% H<sub>2</sub> firing, retrofit systems;
  - Gasification and reforming technologies
- **Carbon Capture Utilization & Storage:** Capture - Pre-combustion capture (gasification and industry)
- **Crosscutting R&D:**
  - Energy Storage - large scale materials-based and H<sub>2</sub> storage, grid-scale energy storage;
  - Simulation Based Engineering /Integrated Energy Systems - Modeling and optimization tools for FE and FE-based and IES systems
- **21<sup>st</sup> Century Power Systems:** FEED studies for gasification-based carbon-negative power and hydrogen co-production

# FY 2021 Funding Opportunities

## Fossil Energy based Production, Storage, Transport & Utilization of H<sub>2</sub> - \$27.5M

- Topics include development of solid-oxide electrolysis; engineering design of advanced CO<sub>2</sub> capture from H<sub>2</sub> production; and H<sub>2</sub> combustion systems for gas turbines (includes coordination with HFTO)

## University Turbines Systems Research — Focus on H<sub>2</sub> Fuels: \$6.4M

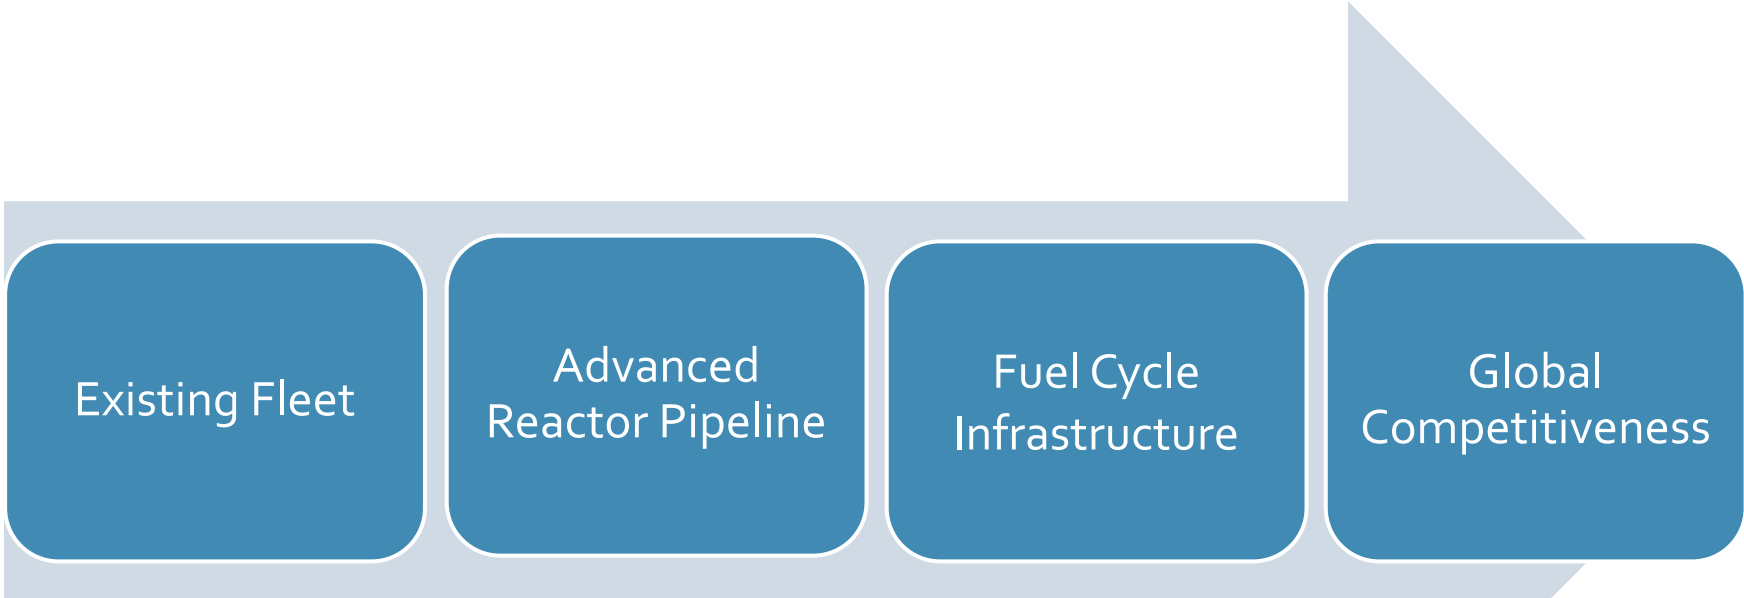

- Topics include H<sub>2</sub> combustion fundamentals and applications for gas turbines; & H<sub>2</sub>-air rotating detonation engines

# Hydrogen Activities in Nuclear Energy (NE)

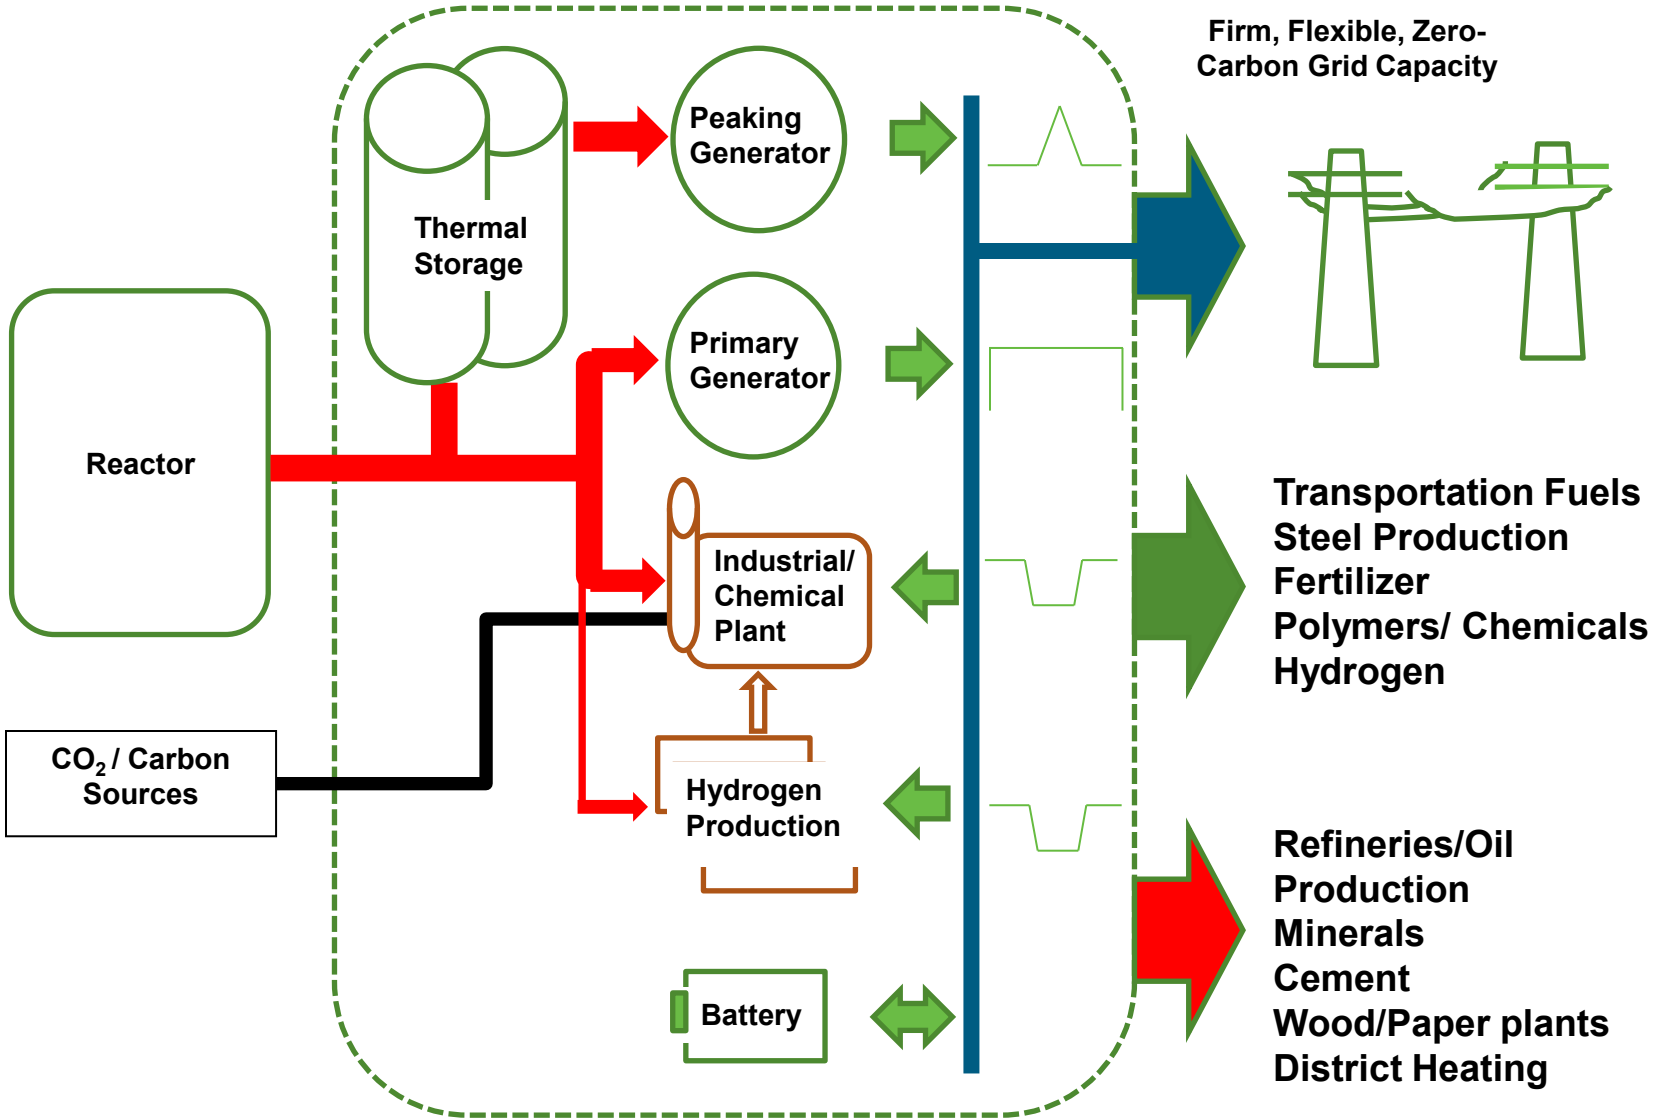

Alison Hahn, Reactor Optimization and Modernization Team Lead

# NE Mission Focus Leads to Global Competitiveness in Nuclear Technology

**52% of emissions free electrical power in US.**

# Nuclear Integrated Energy Systems Strategy

# Recently Funded Nuclear Powered Hydrogen Demonstrations

## Hydrogen Demos

Four demos at three nuclear plants

## Electrolysis Technology

Low-temp PEM: ~60% efficient

High-temp steam: ~80% efficient

	kW	kg/day H <sub>2</sub>
Exelon LT	1,000	430
Energy Harbor LT	2,000	860
FC Energy HT	250	180
Xcel HT	150	110

\*estimated

# Hydrogen Research in Basic Energy Sciences (SC)

Linda Horton, Associate Director of Science for Basic Energy Sciences

# Hydrogen and Fuel Cell Underpinning Science in SC-BES

- Fundamental chemical and materials sciences research to advance understanding and transformative approaches for hydrogen generation and use
- Research topics include
  - **Discover, design, and synthesize advanced materials** including catalysts for chemical conversions, membranes for separation, purification and ion transport, photoelectrodes for solar hydrogen production, and novel materials for hydrogen storage.
  - **Understand chemical mechanisms, leading to their design and control**, for efficient and selective chemical processes such as reactions, separations, ion/molecular transport, molecular update/release.
  - **Advance experimental and computational tools, including AI/ML**, to accelerate discovery and increase understanding of fundamental chemical, materials, and biological processes.
- Annual solicitations applicable for basic research in these areas include the “open” annual SC FOA. FOAs focused on special topics (e.g., Energy Frontier Research Centers, etc.) can also be relevant to hydrogen research.
- At the core of SC-BES strategic planning are reports from “Basic Research Needs” workshops and roundtables (e.g., 2003 Hydrogen Economy; 2017 Catalysis Science; 2019 Liquid Solar Fuels). For 2021, SC-BES is planning a hydrogen-focused roundtable to explore new science opportunities to advance hydrogen technologies.

# Roundtable on Foundational Science for Carbon-Neutral Hydrogen Technologies

**Organized by SC-BES (lead), EERE-HFTO, FE, and NE**

**Goal:** Identify the key underpinning science needs and priority research opportunities that will accelerate RDD&D of net-zero hydrogen technologies in the US

**Roundtable Scope:**

- Production, delivery, storage, and use of H<sub>2</sub> in carbon-neutral cycles
  - Water splitting and thermal (gasification/pyrolysis) processing of feedstocks as resources for H<sub>2</sub> production
  - H<sub>2</sub> used as a fuel (energy carrier) and chemical (reactant)
- Focus on crosscutting basic science concepts and approaches to impact multiple technology areas
- Preparation of a resource document on the status of hydrogen technologies for use by the roundtable and community

**Participants:** A diverse group representing labs, universities, industry, and other stakeholders

**Target date:** Early August

**Output:** A public report describing Priority Research Opportunities that identify fundamental science needed to enable technologies to overcome barriers as outlined by DOE Technology Offices

# SC User Facilities Have Important Roles in Hydrogen Research

- Advanced Scientific Computing Research leadership class computers cross many disciplines to accelerate transformative progress
- Biological and Environmental Research user facilities bring bioanalytical instrumentation, genomic sequencing, and systems biology tools for innovative approaches for biological hydrogen generation
- Basic Energy Sciences light, neutron, and nanoscience facilities provide advanced synthesis and characterization to enable next-generation energy technologies

*Strong collaboration between SC-BES User facilities and hydrogen-related consortia have resulted in joint publications in high-impact, peer reviewed journals.*

# Photoelectrochemical Generation of H<sub>2</sub> and Benchmarking of Performance

Materials discovery and mechanistic study on semiconductor/electrolyte interfaces

Protective layers formed by atomic layer deposition enabled stable photoelectrodes

Multi-physics, multi-scale modeling & simulation

*Science*, 2014, 344, 1005; *Energy and Environ. Sci.*, 2015, 8, 2409-2416; *Angew. Chemie Int. Ed.*, 2016, 55, 12974

Modeling, Integration, and Assembly R&D

Prototyping of 19% efficient solar fuel generators

Experimental demonstration of solar fuel generators

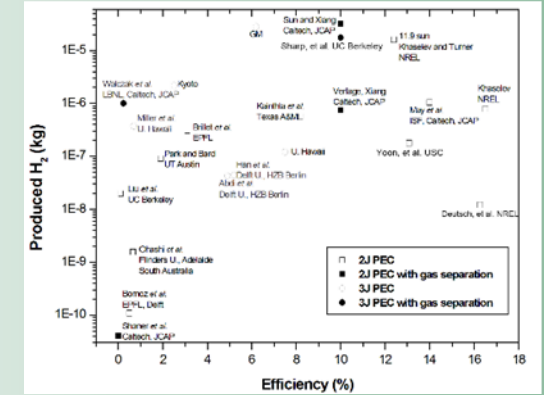

Life-cycle net energy assessment & analysis

*Energy and Environ. Sci.*, 2015, 8, 3166-3172; *Adv. Energy Mat.*, 2017, 7, 1602791; *Energy and Environ. Sci.*, 2016, 9, 803-819

Development & Commercialization

Establishing Benchmarking and Best Practices for PEC water-splitting

Benchmarking device performances in real-world conditions

Coordinate with National Lab Nodes experts to establish Best Practices for materials characterization and benchmarking.

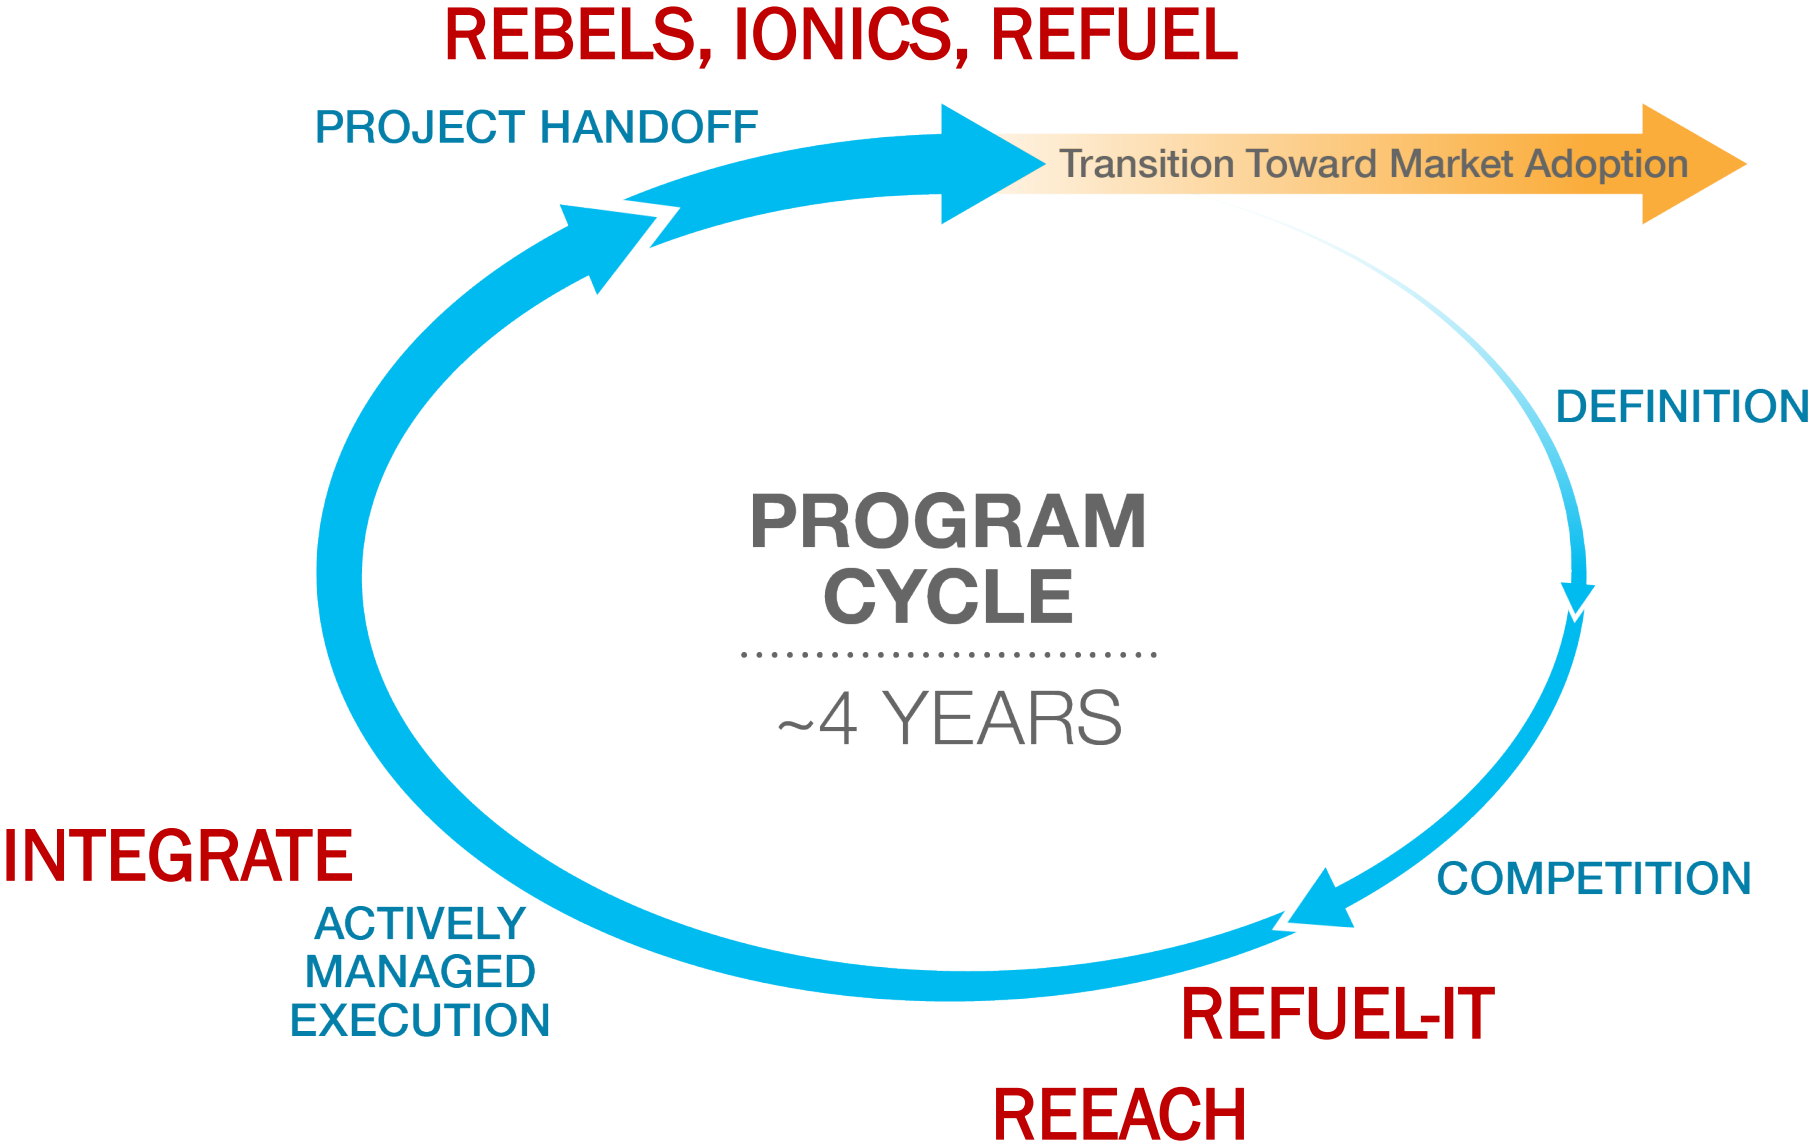

EERE - HydroGEN

# ARPA-E Hydrogen and Fuel Cells Activities

Scott Litzelman, Ph.D., Program Director, Advanced Research Projects Agency - Energy

For more details see presentation by Grigorii Soloveichik on  
Wednesday at 10 am (ARPAE001)

# How ARPA-E starts and manages programs

# Interest in stationary hydrogen storage

US Department of Energy  
Advanced Research Projects Agency-Energy

Request for Information (RFI)  
DE-FOA-0002468

on  
Stationary Hydrogen Storage Technology Development

## Stationary Hydrogen Storage

In this video, ARPA-E Program Director Dr. Zak Fang discusses stationary hydrogen storage in connection with ARPA-E's OPEN 2021 funding opportunity.

<https://arpa-e.energy.gov/open-2021/webinars>

# ARPA-E is (always) hiring

## PROGRAM DIRECTOR

- Program development
- Active project management
- Thought leadership
- Explore new technical areas

## TECHNOLOGY-TO-MARKET ADVISOR

- Business development
- Technical marketing
- Techno-economic analyses
- Stakeholder outreach

## FELLOW

- Independent energy technology development
- Program Director support
- Organizational support
