

Center of Excellence for Chemical Hydrogen Storage

William Tumas
Los Alamos National Laboratory
May 24, 2005

Project ID #
ST11

This presentation does not contain any proprietary or confidential information

Chemical Hydrogen Storage Center

Overview

Timeline

Project Start Date: FY05

Project End Date: FY09

New Start

Budget

Total project funding (requested)

– \$ 29.9 M DOE share

– \$ 3.34 M Cost share

Funding for FY05: \$ 3.9 M (DOE)

\$ 425K (Cost share)

Barriers Addressed

Cost

Weight and volume

Energy efficiency

System life-cycle assessment

Spent material removal

Regeneration processes

Heat removal

Chemical Hydrogen Storage Center

National Laboratories

Los Alamos, Pacific Northwest

Universities

Pennsylvania State University
University of California at Davis
Northern Arizona University
University of Pennsylvania
University of California at Los Angeles
University of Washington
University of Alabama

Companies

Rohm and Haas
Millennium Cell
Intematix
U.S. Borax

Overview: Chemical Hydrogen Storage

- Attractive Features:
 - Liquid or solid fuel infrastructure
 - Potential for no H₂ handling by consumer
 - Diversity of options
 - Off-board or on-board regeneration

Chemical Hydrogen Storage and Regeneration

Thermodynamics & Kinetics

Example: NaBH_4

Chemical Hydrogen Storage

It's the right combination of a material and a reaction

Hydrolysis:

Dehydrogenation:

Dehydrocoupling:

... and families of reactions
yet to be developed

Each reaction family has numerous opportunities

Center Objectives

- Identify, research, develop and validate the best chemical hydrogen storage systems to overcome technical barriers and meet 2010 DOE goals
- Develop materials, catalysts, catalytic processes, and new concepts for hydrogen release and regeneration
- Design, synthesis, and testing of structures/compositions to control thermochemistry of H₂ release and spent fuel regeneration
- Engineering assessment for H₂ release and regeneration
- Engineering scale studies to assess performance in hydrogen delivery systems
- Life cycle inventory to assess regeneration energy requirements
- Demonstration of a 1 kg storage system

Center Approach

- Capitalize on a broad spectrum of expertise
 - Engineering, manufacturing
 - Computation and modeling
 - Chemical and materials synthesis and characterization
 - Mechanisms, electrochemistry, analysis
 - Catalyst discovery, high throughput screening
 - Safety analysis
 - Systems engineering
- Support synergistic, integrated effort
 - “Fail fast:” identify early what will not work
 - “Engineering guided research:” identify what is worth making work
 - Core capabilities in computation, experimental facilities and engineering analysis
 - IP agreement: Promote vetting ideas and cooperative R&D, reward success

Three Tier Structure of Center

- Tier I:
 - Develop borate-to-borohydride (BO to BH) regeneration alternatives and assess economics and life cycle analysis of borohydride/water to hydrogen
 - Millennium Cell, Rohm and Haas, Penn State, Alabama, PNNL, LANL
- Tier II:
 - Avoid water and thermodynamic sinks. Alternative boron chemistry approaches include polyhedral boranes (B_xH_y), amine-boranes and BCNP chemistry
 - Penn, Penn State, UCLA, Washington, Northern Arizona, Alabama, Intematix, PNNL, LANL
- Tier III:
 - Beyond boron:
 - Develop concepts for coupled endo/exothermic reactions, Investigate nanomaterials
 - Use heteroatom substitution for thermodynamic control
 - UC Davis, Alabama, Intematix, PNNL, LANL

Center Core Capabilities

- Computation (PNNL, Alabama)
 - Access to Molecular Scale Computational Facility for theoretical studies through Grand Challenge grant award
 - Access to high performance codes
 - Access to collaborative staff to help center partners with theoretical needs
- Engineering assessment (Rohm and Haas, PNNL)
 - Industrial engineering assessment on new concepts and results
 - Pre-research engineering guidance
 - Foster relationship between Center partners and the standards testing lab being established at Southwest Research Inst.
- Complex instrumentation (PNNL, LANL)
 - Access to user facilities at LANL & PNNL
 - Developing measurement protocols for thermodynamics and kinetics
 - Specialized characterization of materials (thermochemistry, NMR, spectroscopy, etc.)
- IP management (IP Management Committee)
- Safety (PNNL, LANL, Northern Arizona)
- Center coordination, meetings, technical planning (LANL)

Tier	Project	Partners
1	Tier 1: Borohydride	
1.1	BO-> BH Engineering Guided R&D	ROH, MCEL, USB, PSU, Ala, PNNL, LANL
1.2	Engin. assessment for H2 generation systems	PNNL, MCEL, ROH
2	Tier 2: Novel Boron Chemistry	
2.1	Polyhedral Borane: Hydrolysis/Aminolysis	UCLA, IMX, PNNL, LANL
2.2	Polyhedral Borane Electrochemistry	PSU, UCLA, Ala, PNNL, LANL
2.3	Amine-Borane Dehydrogenation/Hydrogenation	Penn, NAU, PNNL, LANL
2.4	Amine-Borane: Mechanistic work	UW, PNNL, LANL
2.5	Amine-Borane: Scaffolds	PNNL
2.6	AB H2-gen systems engin. assessment, safety	PNNL, NAU
3	Tier 3: Innovation Beyond Boron	
3.1	Coupled reactions	LANL
3.2	Organics	Ala, PNNL, LANL
3.3	Nanoparticles	UC Davis, LANL
3.4	Main group hydrides	UC Davis, PNNL, LANL

Center Integration

Computational assessment of approaches (energetics)
Experimental and catalytic studies on high capacity storage systems
Catalyst development
State-of-the-art experimental techniques
Life cycle assessment, systems engineering
Demonstration

Technical Accomplishments and Future Work

- New Start FY05
- A number of preliminary results
 - See posters of all Center partners
 - Some preliminary results presented in talk
- Work plan developed for all Center projects
 - Collaborative projects launched
 - Several collaborative project meetings already held
 - Tier 1, Tier 2
 - Objectives and milestones developed

Tier 1: Borohydride

Project	Partners
B-O to B-H (Engineering Guided Research)	ROH, PSU, MCEL, PNNL, USB, Ala, LANL
Engineering Analysis for Hydrogen Generation Systems	ROH, MCEL, PNNL

Objectives

- Data mining of prior work, including proprietary information
 - From Rohm & Haas, US Borax, Millennium Cell, Redstone Arsenal
 - Share information on past studies and analytical characterization
- Investigate electrochemical methods for borate reduction
 - Mechanisms, electrodes and electrocatalysts, complexants
- Develop concepts for borate complexation and reduction
- Engineering assessment of findings and concepts
 - Define equipment requirements
 - Energy and economic analysis
- Engineering analysis for H₂ generation systems (liquids and solids)

Electrochemical Reduction of Borates

- Engineering analysis
- Positive results from past studies (aqueous systems)
- Advise/direct experimental program

- Advanced electrode preparation
- Alternative reaction media

- Past experience with aqueous and non-aqueous systems

- Fundamental insight
- Mechanistic studies
- Advanced analytical development

Engineering & Analysis Activities

- Regeneration of the fuel likely off-board
- Engineering aspects of the work are divided into two pieces: production & regeneration

Tier 1: First Year Milestones

- Establishment of economic and engineering criteria (ROH, PNNL, LANL)
- Data mining on B-O to B-H with assessment of preliminary candidates; Report in Year 2 (ROH, MCEL, USB, PNNL, LANL)
- Initiation of technical evaluation of process engineering for borate reduction (ROH, MCEL)
- Experimental survey of complex borates started (LANL, PNNL, USB, ROH)
- Computational results for B-O to B-H energetics including complexed borates (Ala)
- Development of analytical and electrochemical methods for B-O to B-H (PSU, LANL)
- Reactor system analysis for liquids and solids (PNNL, MCEL)

Tier 2: New Boron Chemistry

Project	Partners
Polyhedral borane (PHB): hydrolysis/aminolysis	UCLA, Intematix, PNNL, LANL
PHB Electrochemistry	UCLA, PSU, Ala, LANL
Amine-Borane (AB) Dehydrogenation/Hydrogenation	Penn, NAU, PNNL, LANL
AB Mechanistic Work	UW, PNNL, LANL
AB Scaffolds	PNNL
AB H2 Gen Eng Analysis; Safety	PNNL, NAU

Objectives

- Investigate high capacity hydrogen storage systems for:
 - controlled hydrogen release
 - energy efficient regeneration
 - compatibility with fuel cells
- Initial targets are polyhedral boranes and amine-boranes

Polyhedral Boranes

Polyhedral boranes are more stable than borohydride and multiple electron sources

Objective: Optimize catalysts for hydrolysis of polyhedral borane anions using rapid throughput heterogeneous catalyst synthesis and testing

Material storage capacity 9.4 wt% hydrogen (including water)

Future Work:

Thermodynamics, theory and calorimetry

Other H_2 generation routes

- Aminolysis
- Electrochemistry

New regeneration routes from borate

UCLA, Intematix,
PNNL, LANL Posters

Rapid Throughput Catalyst Synthesis and Testing

Intematix poster

Production/Regeneration of Polyhedral Boranes

- Selective synthesis of $\text{B}_n\text{H}_n^{2-}$

UCLA Poster

Amine-Borane Dehydrogenation/Regeneration

Penn, NAU, Ala, UW, PNNL, LANL Posters

AB Dehydrogenation/Regeneration

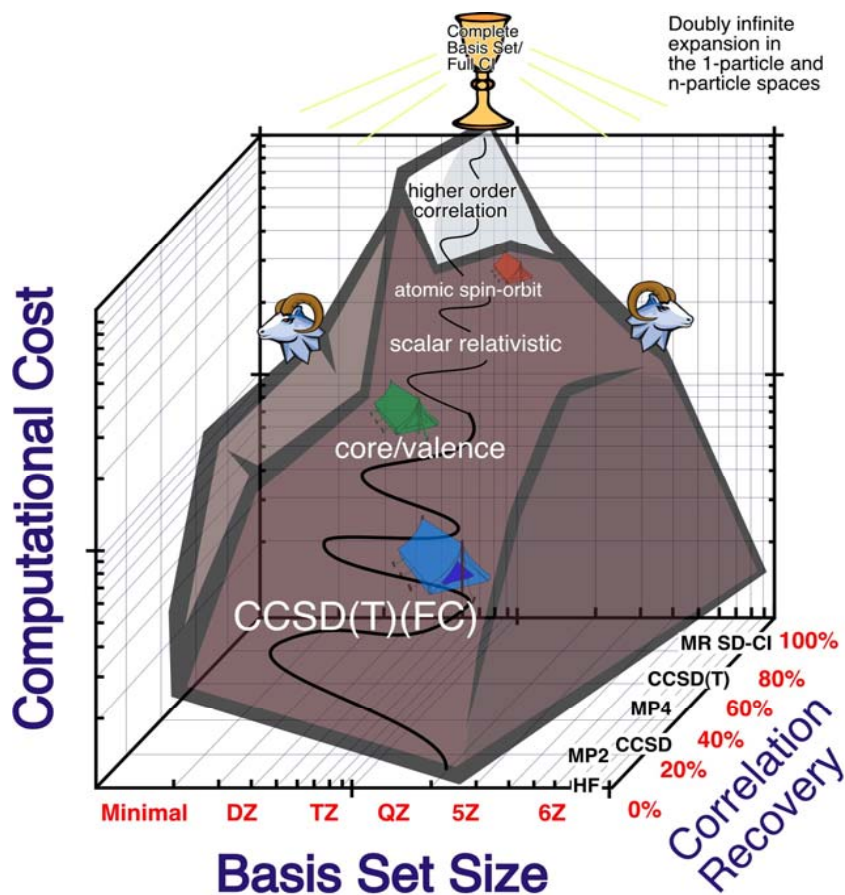

Objective:

- Achieve controlled release of hydrogen from amine-boranes to products that can be efficiently regenerated

Approaches:

- Kinetics and mechanistic studies to understand amine-borane dehydropolymerization
- Computational guidance on thermochemistry, medium effects
- Catalyst development to control kinetics and selectivity
 - homogeneous, heterogeneous catalysts
- Medium and substituent effects
 - scaffold effects, alternative reaction media
- Properties and safety data
- Engineering systems analysis

Theory and Computation

Alabama, PNNL Posters

Results (Solids)

- $\text{H}_3\text{B}\leftarrow:\text{NH}_3$ Electron donor-acceptor bond
 - Large dipole moment of 5.3 D
 - The $\text{H}_3\text{B}-\text{NH}_3$ bond energy is 25 kcal/mol
- $\text{NH}_2\text{BH}_2 \rightarrow \text{NHBH} + \text{H}_2$; $\Delta H = -3$ kcal/mol
- $\text{NHBH} \rightarrow \text{BN} + \text{H}_2$; $\Delta H = -9$ kcal/mol
- Undoped NH_2BH_2 and NHBH are insulators

Calculate accurate molecular heats of formation (± 1 kcal/mol) by ab initio molecular orbital theory

Computational Design of Materials for Hydrogen Storage
 - 900,000 node-hours per year for 3 years

Amine-Borane R&D

Mechanisms for AB Dehydrogenation

UW, PNNL, LANL Posters

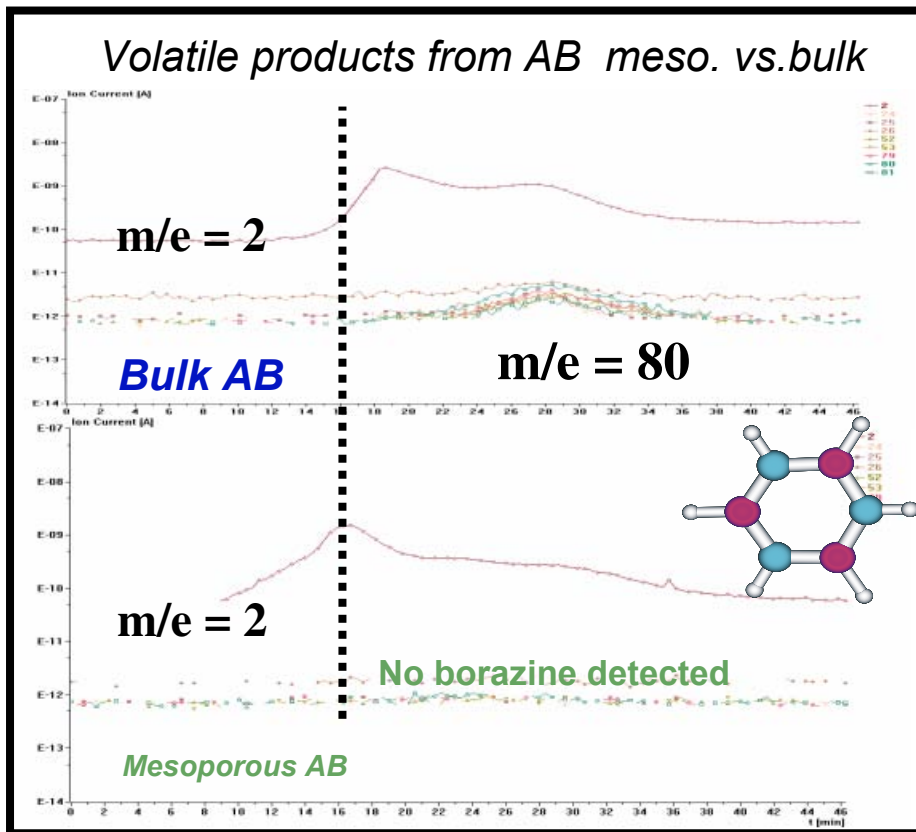

Catalyst Development Kinetics/ Selectivity

- New proprietary catalysts developed

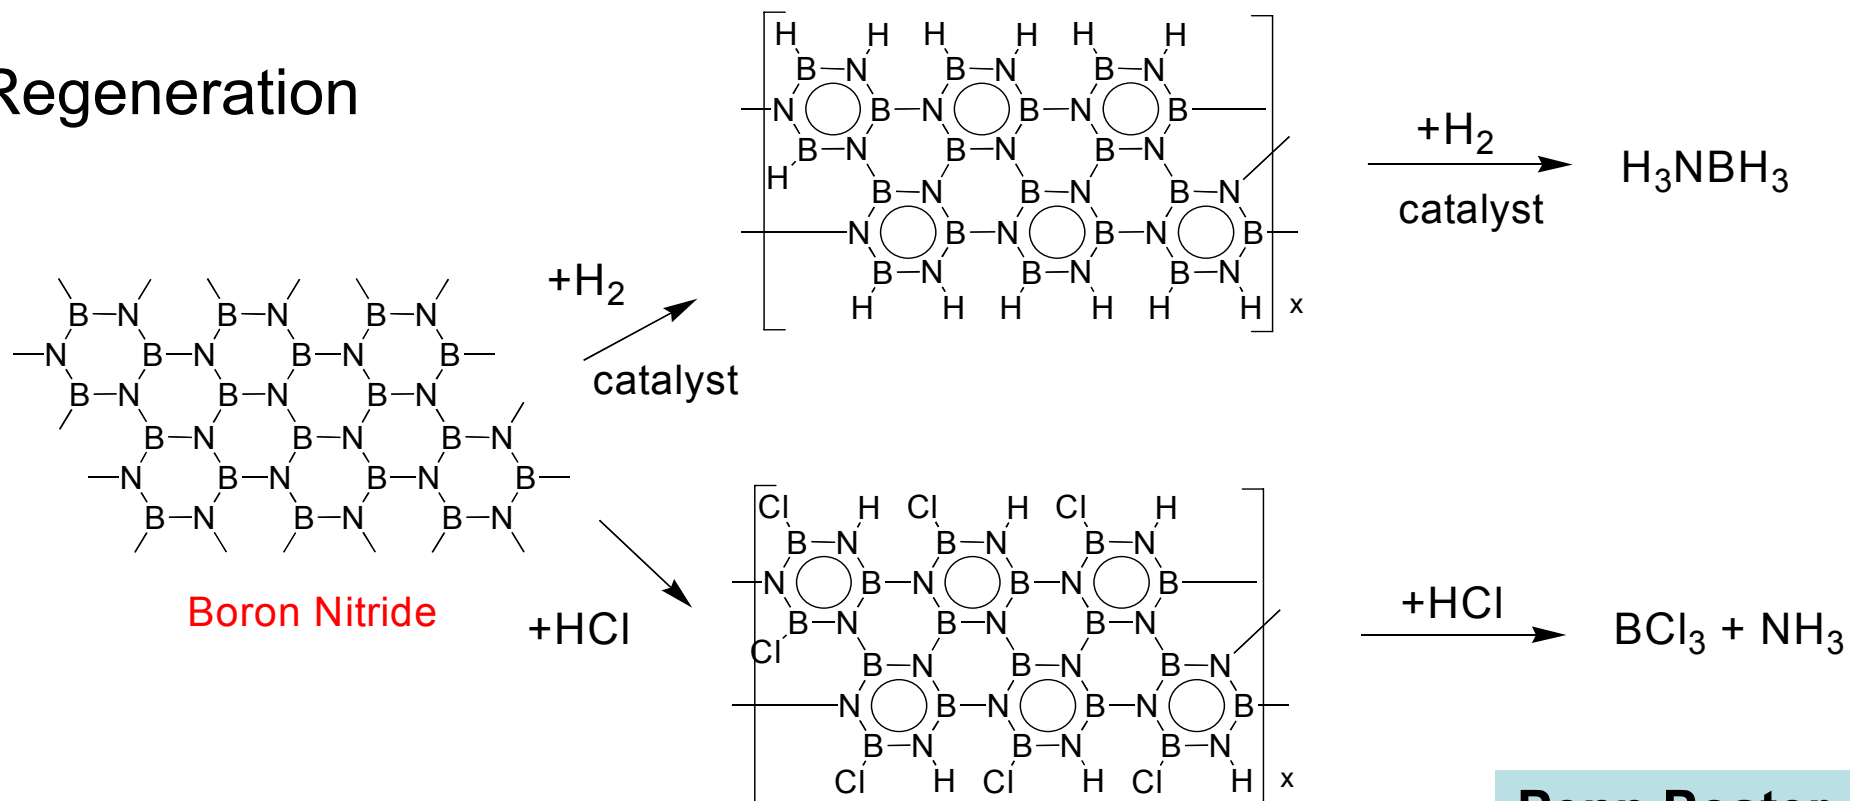

Penn, NAU, PNNL, LANL Posters

NH_xBH_x in Mesoporous Oxide Scaffolds

Amine-Borane R&D

Regeneration

Penn Poster

Safety

- Safe handling of amine-borane compounds
- Safety guidance for chemical hydrogen storage center
- Preparation, solubility, stability and hydrogen evolution from substituted amineborane compounds

NAU Poster

Tier 2: First Year Milestones

- Synthesis of quantities of complex boranes (UCLA)
- Catalyst development for complex borane hydrolysis (UCLA, LANL, IMX)
- Preliminary demonstration of electrochemical transformations in the B-H systems and oxidation state changes (PSU, LANL, UCLA)
- Screening of homogeneous and nanocatalysts for amine borane dehydrogenation (PNNL, LANL, Penn)
- Screening of haloacid reactivity with BN oligomer/polymer (Penn)
- Model studies of BN compounds with transition metals (UW)
- Safety data and properties of amine boranes (NAU)
- Computation of thermochemistry for BN compounds and intermediates (Ala)
- Amine borane and intermediate characterization within scaffolds (PNNL)

Tier 3: Beyond Boron

Project	Partners
Heteroatom-substituted organics	Alabama, PNNL, LANL
Coupled reactions	LANL
Nanoscale materials	UC Davis, Intematix, LANL
Main-group hydrides	UC Davis, Alabama, PNNL

Objectives

- Develop new concepts for hydrogen generation
- Control and tune thermodynamics and kinetics
- Synthesize and characterize new materials
- Calculate thermochemistry for promising concepts
- Use high-throughput catalyst discovery, materials development
- Redirect work based on developments, discovery
- Engineering assessment of promising results

Imidazolium Borohydride

The first X-ray structure of an imidazolium borohydride was determined.

Structure shows interactions between hydrogen at C-2, C-4 and the borohydride and evidence for an H-H “hydrogen bond”

Exergonic H₂ Evolution at Ambient Temperature: A Chemical Hydride

- Demonstration of judicious heteroatom substitution
- Future work to focus on
 - Improving wt% H₂ in related and other systems
 - Increasing rate of H₂ evolution
 - Regeneration

Tier 3

- Coupled Reactions
 - Couple reactions in such a way that endothermic H₂ evolution can be driven by exothermic co-reaction
 - {Organic substrate} + H₂O + {inorganic component} → H₂ + {recyclable coproduct}
 - LANL-proprietary concepts, with hypothetical H₂ capacity > 6 wt% (> 0.09 kg H₂/liter)
 - Proof of concept, patent filing
- Main-group compounds
 - Hydrogen-active E=E bonds
 - Heterosubstituted organic compounds

Nanoscale Materials

- Realize the potential to store and release hydrogen
 - Doped-B, Si nanoparticles by solution core-shell synthesis
 - Metal-based nanoparticles by gas-solid synthesis
 - Targets: 1-2 nm particles, compositions
 - $M_{1.0}H_{1.0}$, $M_{1.0}(NH_2)_{1.0}$, $M_{1-x}M'_xH_{1.0}$, $M_{1-x}M'_x(NH_2)_{1.0}$
(M, M' = B, Al, Si, C)
 - Establish ability to hydrogenate, dehydrogenate

Capped Si nanoparticles
obtained by oxidation of Mg_2Si

Tier 3: First Year Milestones

- Proof of concept of coupled reaction and patent filing (LANL)
- B_xH_yN and NH_2 -capped Si nanoparticle synthesis and characterization (UC Davis, LANL)
- Computation of thermochemistry for heteroatom-containing organic structures (Ala)
- Computation of thermochemistry for imidazolium complexes (Ala)
- At least one storage candidate containing heteroatoms (LANL)
- C-N oligomer synthesis and characterization (Ala)
- Main-group compound synthesis (UC Davis)

	YEAR 1			YEAR 2			YEAR 3			YEAR 4			YEAR 5		
Tier 1: Borohydride															
1.1 BO-> BH (Engineering Guided Research)															
1.2 Eng. assessment for H2 generation systems															
Tier 2: Novel Boron Chemistry															
2.1 Polyhedralborane: Hyd/Am. Catalyst Disc															
2.2 Polyhedralborane Electrochemistry															
2.3 Amine-Borane Dehydrogenation/Hydrog'n															
2.4 Amine-Borane: Mechanistic work															
2.5 Amine-Borane: Scaffolds															
2.6 Amine-borane H2 Gen systems engin., safety															
Tier 3: Innovation Beyond Boron															
3.1 Coupled reactions															
3.2 Organics															
3.3 Nanoparticles															
3.4 Main group hydrides															
Data Mining, Computation/Modeling															
Experimental Laboratory Work															
Engineering Assessment															
Go/No Go Decision															

Center Project 1.1: B-O to B-H (ROH, MCEL, Alabama, PSU, PNNL, LANL)

TASK	Year 1	Year 2	Year 3	Year 4	Year 5
Data mining	Goals, criteria established; options documented				
Engineering Guided Reduction R&D	Identification of leading options		Leading options development		
				Design data	
Computation of Energetics	Energetics of intermediates; reaction pathways				
Electrochemical Mechanistic Work	Borate and complexed borates			Pathways detailed	
Electrode/Catalyst Development	Laboratory-scale experimental work				
				Optimization	
Complexation and Reduction of Borate	Solution chemistry, stoich. rxns			thermochemistry, mechanisms	
Engineering Assessment				Assessment of exptl results	
				Eng. design	

Go/No Decision Point

Center Coordination

- Objectives
 - Real collaboration and information sharing within Tiers
 - Collaborative project structure
 - Share background information
 - Foster joint discovery/inventions
 - Reward and manage success
- Status
 - Joint development projects (Center projects) defined
 - Framework for IP management developed
 - **Defines management of joint inventions**
 - **Enables technology transfer**
 - Website developed
 - Center project meetings, conference calls
 - Frequent center-wide electronic communication

Chemical Hydrogen Storage CoE

- Penn: Prof. Larry Sneddon
 - Martin Bluhm (PD), Prof. Mark Bradley, William Ewing (GS)
- UCLA: Prof. Fred Hawthorne
 - Satish Jalisatgi (PD), Bhaskar Ramachandran (PD), Robert Kojima (GS), Thomas Quickel (GS), Colin Carver (GS)
- Penn State: Prof. Digby Macdonald
 - Justin Tokash (GS), Jason McLafferty (GS), Yancheng Zhang (PD)
- Alabama: Profs. Dave Dixon, A. Arduengo
 - Owen Webster, Monica Vasiliu, Luigi Iconaru, Michael Phillips, Daniel Grant (GS), Jacob Batson (UGS), Myrna Hernandez Matus (PD), Prof. Minh Nguyen
- UW: Profs. Karen Goldberg, Mike Heinekey
 - Melanie Denney (PD), Vincent Pons (PD)
- UC Davis: Profs. Susan Kauzlarich, Phil Power
 - Japhe Raucher (GS), Li Yan Wang (PD)
- NAU: Prof. Clint Lane

Chemical Hydrogen Storage CoE

- Rohm and Haas: Sue Linehan
 - Frank Lipiecki, Arthur Chin, John Yamamoto, Leo Klawiter,, James Vouros,, Sam November, Aaron Sarafinas, Alan Keiter, Wendy Bingaman Jay Soh, and Robert Wilczynski; Larry Guilbault and Duane Mazur (consultants)
- Millennium Cell: Ying Wu
 - Jeffrey Orgeta, Robert Molter, Rick Mohring, Todd Randal, Roxanne Spencer
- Intematix: Xiao-Dong Xiang
 - Wei Shan, Jonathan Belman
- US Borax: Dave Schubert
 - Jonathan Owen
- PNNL: Chris Aardahl
 - Chris Aardahl, Tom Autrey, Maciej Gutowski, Anna Gutowska, John Linehan, Scot Rassat, Wendy Shaw, Ashley Stowe, Mike Thompson
- LANL: Bill Tumas
 - R. Thomas Baker, Anthony Burrell, Fernando Garzon, P. Jeffrey Hay, Neil Henson, Kevin John, Karl Jonietz, Richard Keaton (PD) , Dan Kelly, Kevin Ott, Bobbi Roop, Dan Schwarz (PD), Frances Stephens (PD), David Thorn
