

Innovation for Our Energy Future

2008 DOE Hydrogen, Fuel Cells & Infrastructure Technologies Program Review

# Controlled Hydrogen Fleet and Infrastructure Analysis

Keith Wipke, Senior Engineer and Group Manager Sam Sprik, Jennifer Kurtz NREL June 10, 2008

Project ID# TV-5

This presentation does not contain any proprietary, confidential, or otherwise restricted information

# Fuel Cell Vehicle Learning Demonstration Project Objectives and Targets

- Objectives
  - Validate H<sub>2</sub> FC Vehicles and Infrastructure in Parallel
  - Identify Current Status and Evolution of the Technology
    - Assess Progress Toward Technology Readiness
    - Provide Feedback to H<sub>2</sub> Research and Development

Key Targets			
Performance Measure	2009	2015	
Fuel Cell Stack Durability	2000 hours	5000 hours	
Vehicle Range	250+ miles	300+ miles	
Hydrogen Cost at Station	\$3/gge	\$2-3/gge	

# **Project Overview**

### Timeline

- Project start: FY03
- Project end: FY10
- ~70% of Task III complete (see timeline slide)

# Budget

- Context: Overall DOE project is ~\$170M project over 5 years
  - Equal investment by industry
- NREL funding prior to FY07 : \$2192K
- NREL FY07 funding: \$850K
- NREL FY08 funding: \$850K

### **Partners**

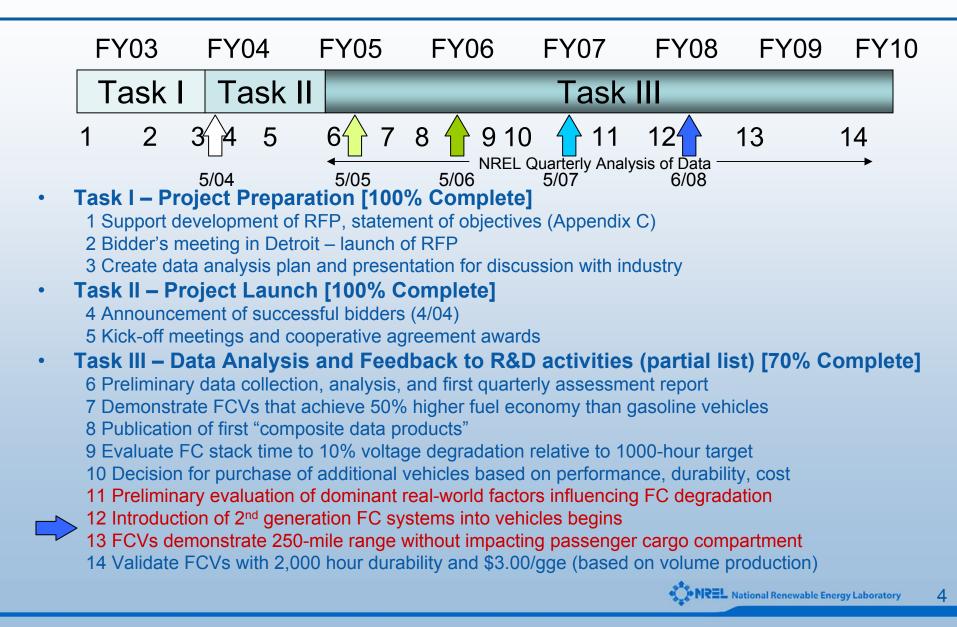

• See partner slide

# Tech. Val. Barriers

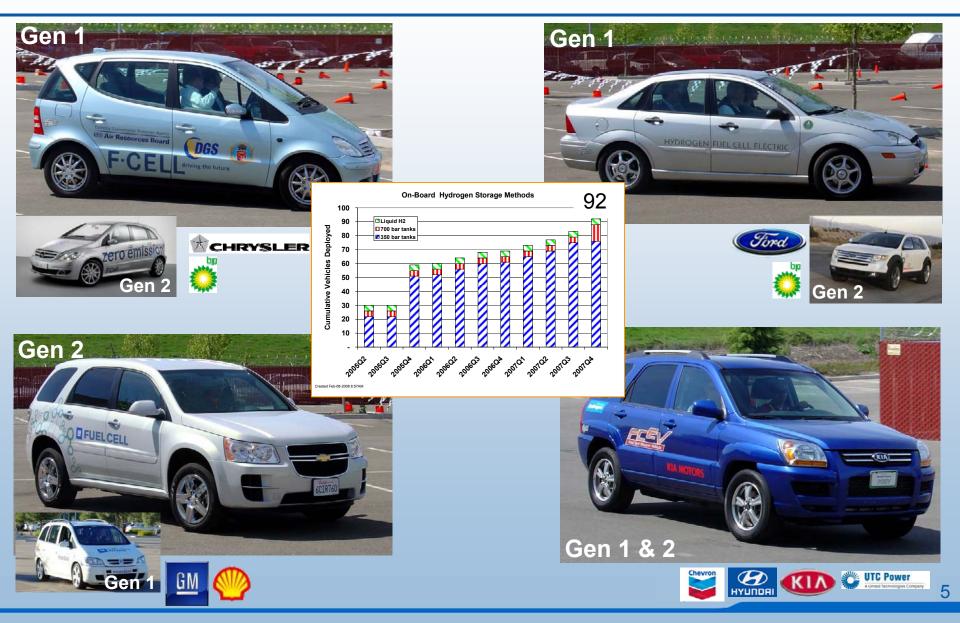

- A. **Vehicles** lack of controlled & onroad  $H_2$  vehicle and FC system data
- B. **Storage** technology does not yet provide necessary 300+ mile range
- C. Hydrogen Refueling Infrastructure – cost and availability
- D. Maintenance and Training Facilities – lack of facilities and trained personnel
- E. Codes and Standards lack of adoption/validation
- H. Hydrogen Production from Renewables – need for cost, durability, efficiency data for vehicular application
- I. H<sub>2</sub> and Electricity Co-Production cost and durability

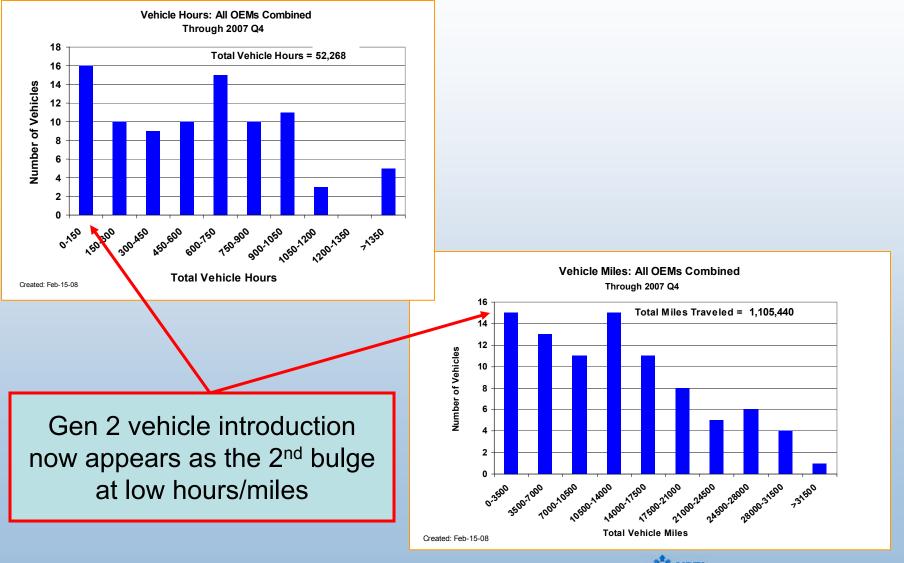

# **Project Timeline and Major Milestones**

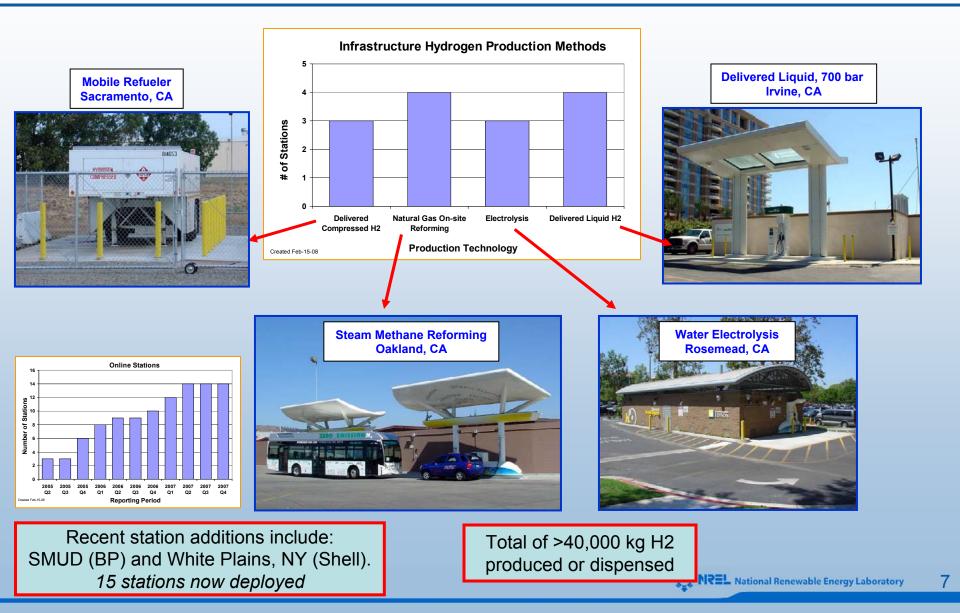

### Industry Partners: 4 Automaker/Energy-Supplier Teams; Rollout: 2<sup>nd</sup> Generation FC Introduction in 2008 Has Begun

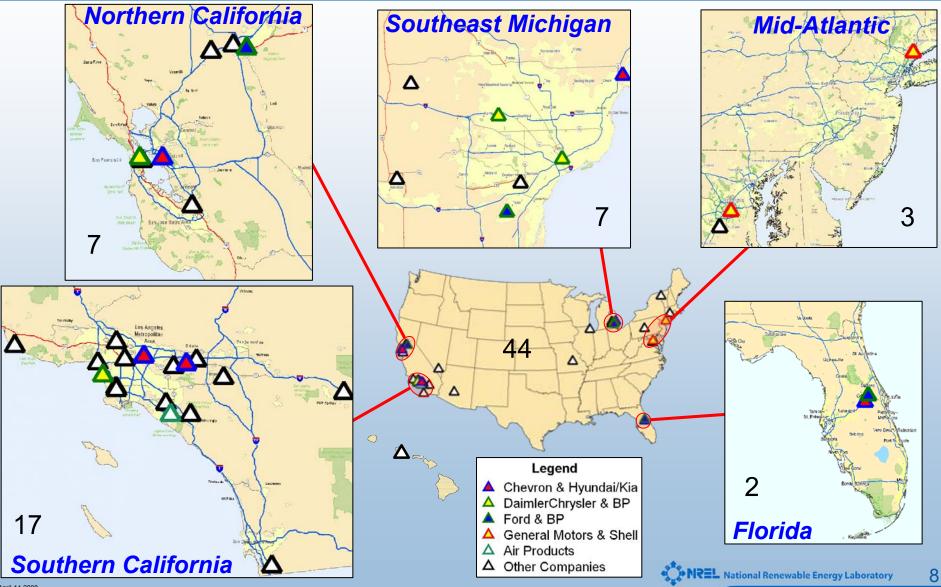

# **DOE Learning Demo Fleet Has Surpassed 50,000 Vehicle Hours and 1.1 Million Miles**

### Majority of Project's Fixed Infrastructure to Refuel Vehicles Has Been Installed – Examples of 4 Types

### Refueling Stations Test Performance in Various Climates; Learning Demo Comprises ~1/3 of all US Stations

April-14-2008

# **Project Approach**

- Provide facility and staff for securing and analyzing industry sensitive data
  - NREL Hydrogen Secure Data Center (HSDC)
- Perform analysis and simulation using detailed data in HSDC to:
  - Evaluate current status and progress toward targets
  - Feedback current technical challenges and opportunities into DOE H<sub>2</sub> R&D program
  - Provide analytical results to originating companies on their own data (detailed data products)
  - Collaborate with industry partners on new and more detailed analyses
- Publish/present progress of project to public and stakeholders (composite data products)

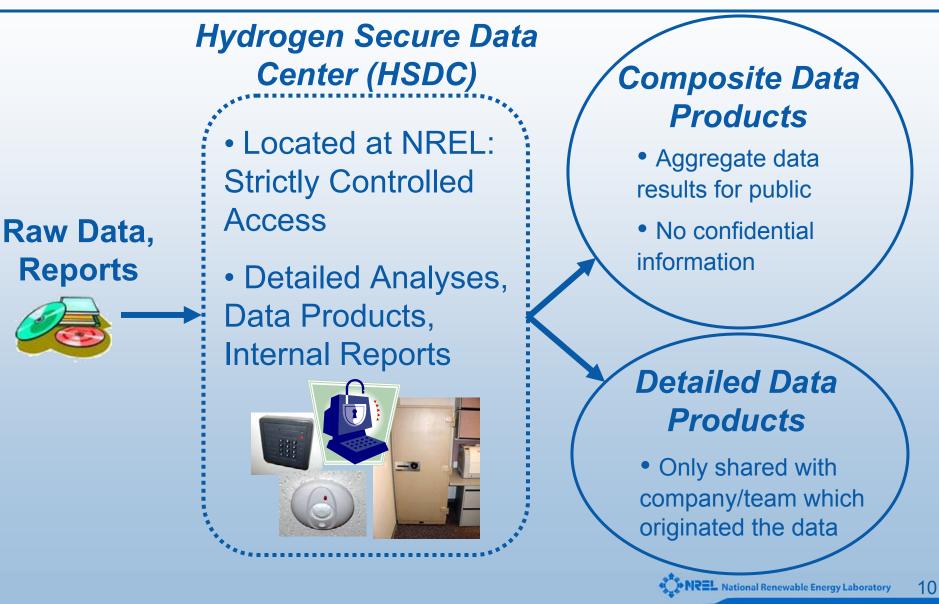

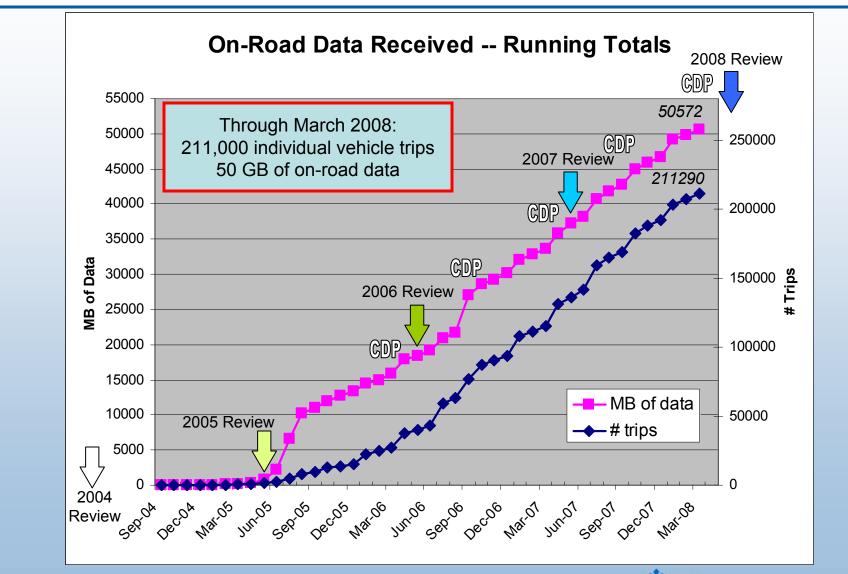

9

### Approach: Providing Data Analysis and Results for Both the Public and the Industry Project Teams

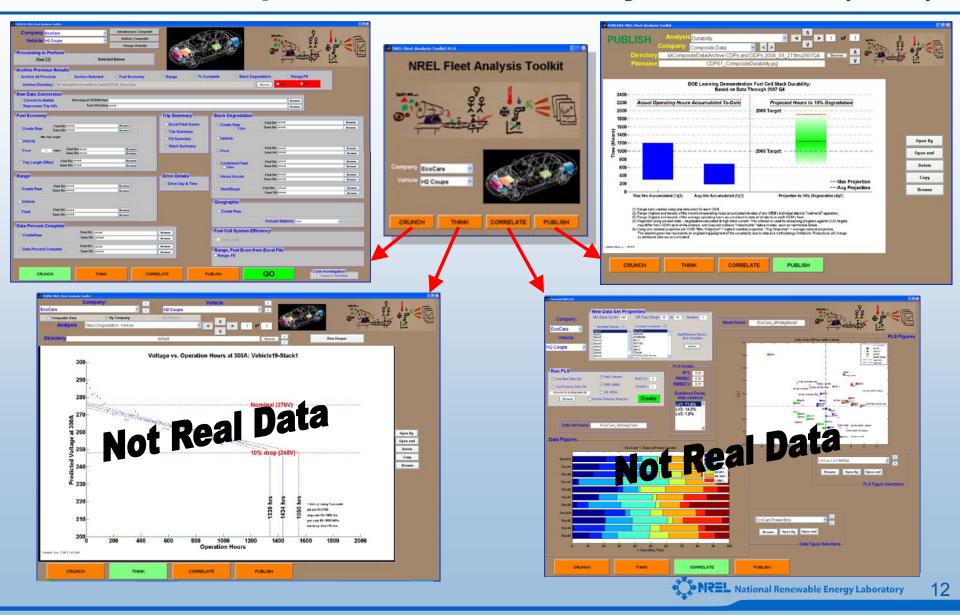

### Accomplishment: Eleven Quarters of Data Analyzed to Date Current Status of Data Reporting to the Hydrogen Secure Data Center at NREL

**GDP** = Composite Data Products Published

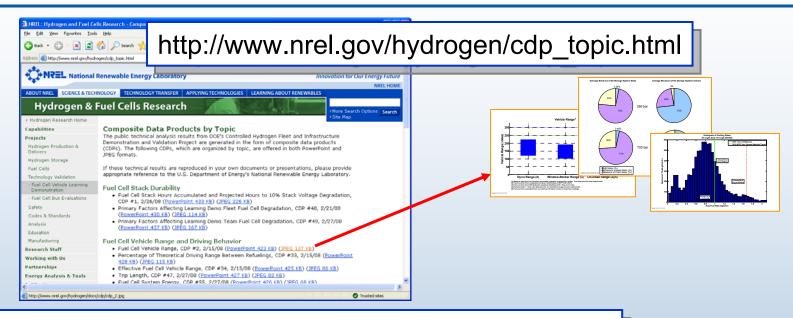

### Accomplishment: Generated All Results Using NREL-Developed GUI – Fleet Analysis Toolkit (FAT)

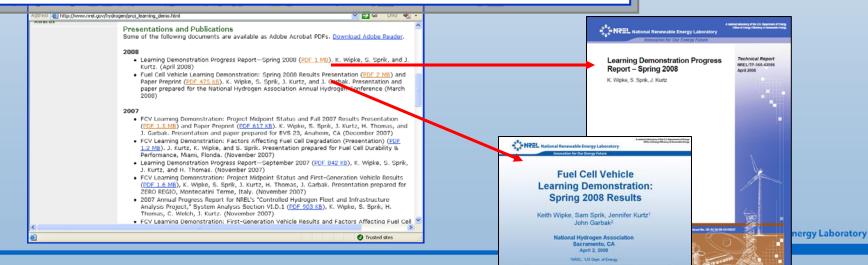

### Accomplishment: In the Last Year Published Fall 2007 and Spring 2008 CDP Results through Conferences, Progress Reports, and Journals

### Accomplishment: NREL Web Site Provides Direct Access to All Composite Data Products (47), Reports, and Presentations

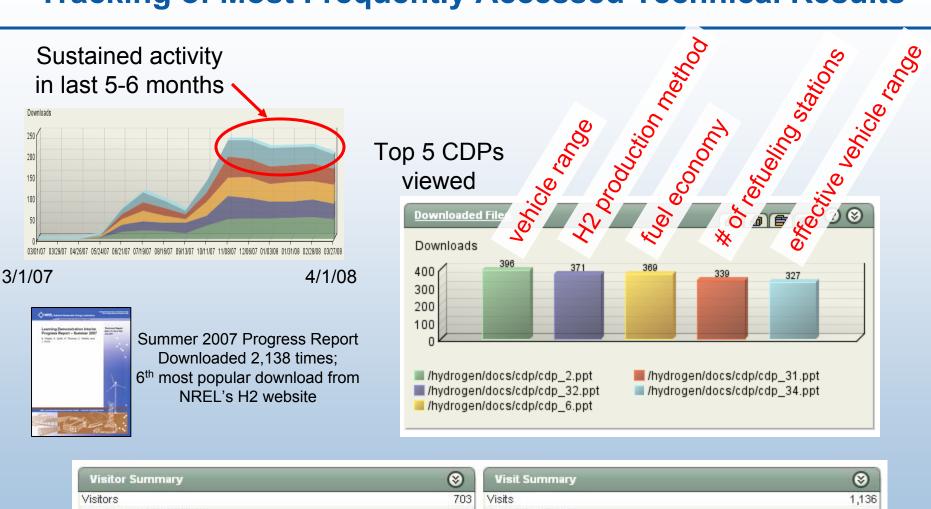

### http://www.nrel.gov/hydrogen/proj\_learning\_demo.html

14

### Accomplishment: Restructured CDP Web Site Files to Allow Tracking of Most Frequently Accessed Technical Results

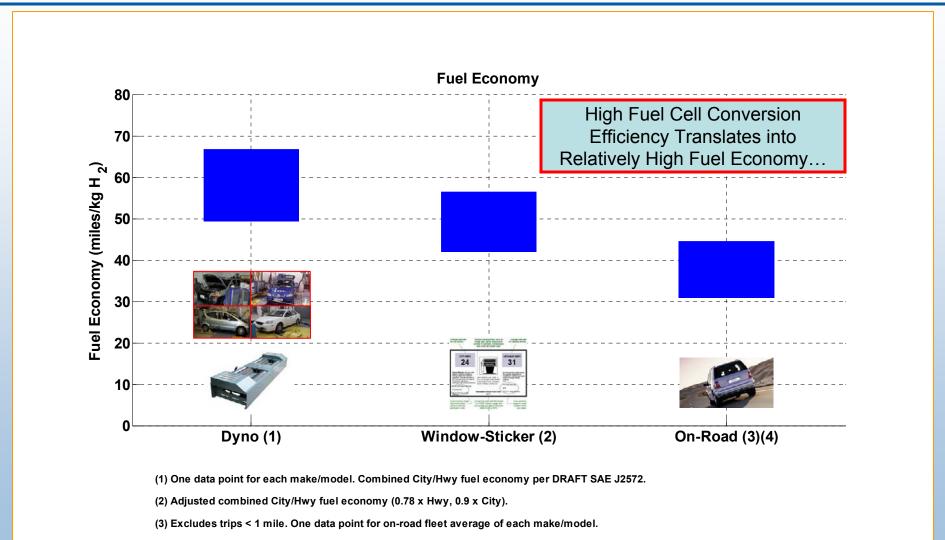

605 98 1.62

### Dynamometer and On-Road Fuel Economy from Gen 1 Learning Demonstration Vehicles

Created: Feb-15-08 7:17 AM (4) Calculated from on-road fuel cell stack current or mass flow readings.

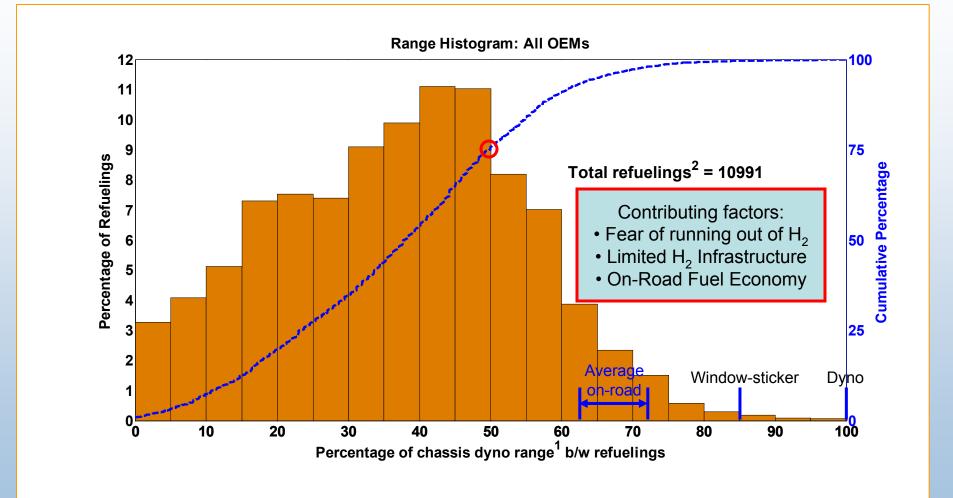

# Gen 1 Vehicle Range Based on Dyno Results and Usable H<sub>2</sub> Fuel Stored On-Board

- (3) Fuel economy from EPA Adjusted combined City/Hwy (0.78 x Hwy, 0.9 x City).
- (4) Excludes trips < 1 mile. One data point for on-road fleet average of each make/model.
- (5) Fuel economy calculated from on-road fuel cell stack current or mass flow readings.

Created: Feb-15-08 7:37 AM

# Majority (75%) of Vehicles Travel <50% of Dyno Range Between Refuelings

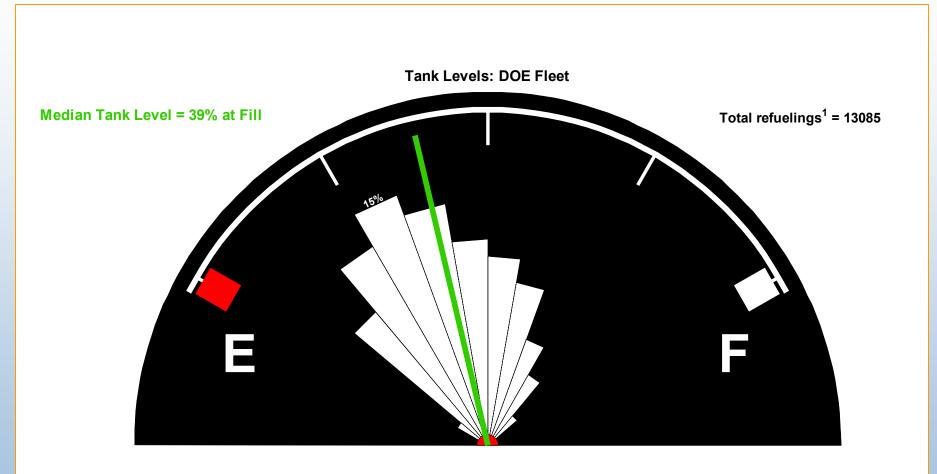

1. Range calculated using the combined City/Hwy fuel economy from dyno testing (not EPA

adjusted) and usable fuel on board.

Created: Feb-15-08 9:20 AM

2. Some refueling events are not detected/reported due to data noise or incompleteness.

# Large Spread in H2 Tank Level at Refueling Peak at ~1/4 Full, Median at ~3/8 Full

1. Some refueling events not recorded/detected due to data noise or incompleteness.

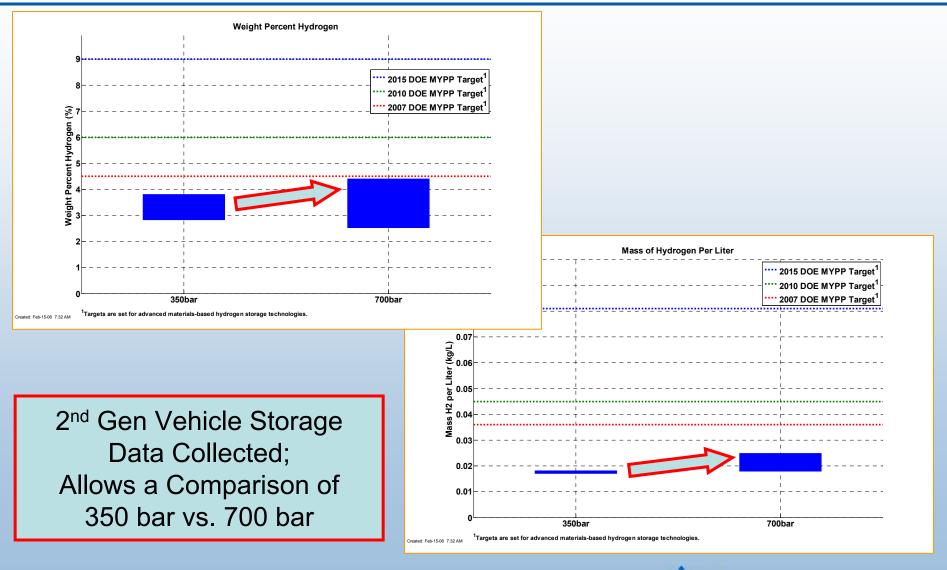

2. The outer arc is set at 20% total refuelings.

3. If tank level at fill was not available, a complete fill up was assumed.

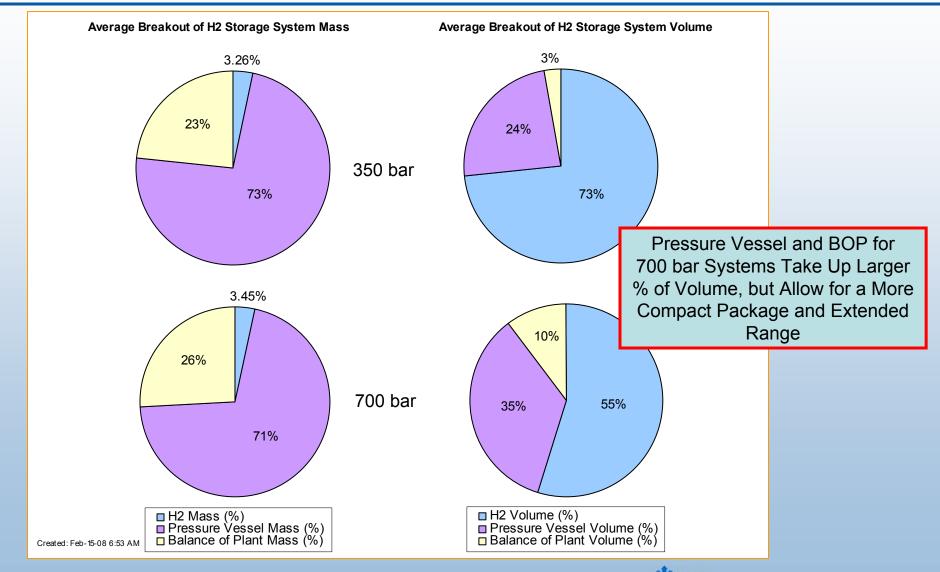

Created: Feb-27-08 10:51 AM

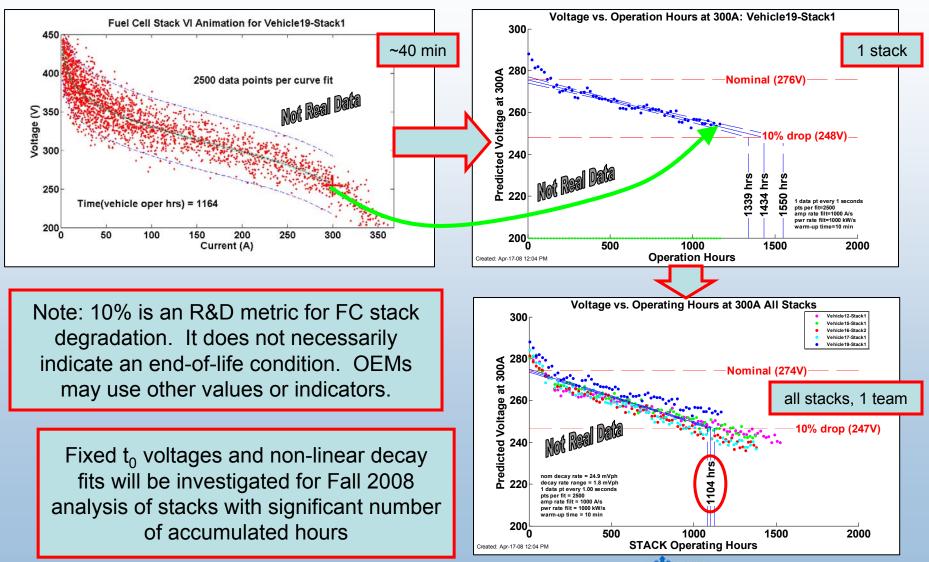

### 700 bar On-Board H2 Storage Systems Demonstrate Potential for Improved Performance Over 350 bar

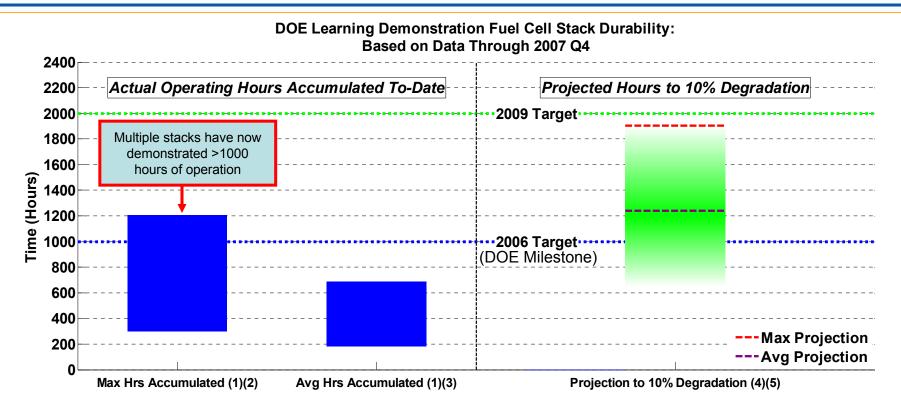

### More Detailed Data Reporting Allows a Comparison of Mass and Volume of H2, Pressure Vessel, and BOP

### **Approach: Method for Projecting Time to 10% Fuel Cell Stack** Voltage Degradation (Linear Decay Fit, Calculated Voltage at t<sub>0</sub>)

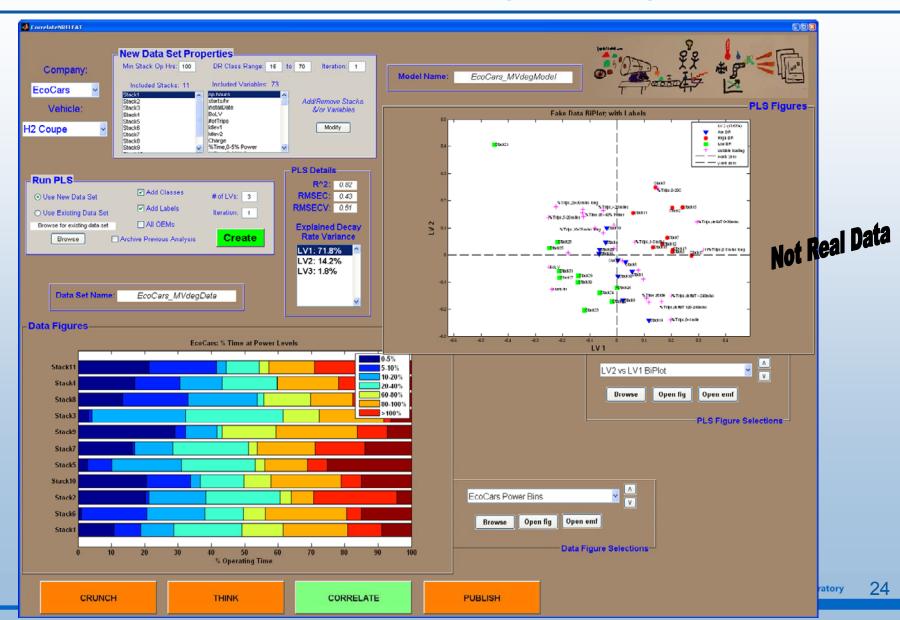

# As More Gen 1 Data Is Accumulated, Some Teams Are Demonstrating Long FC Durability

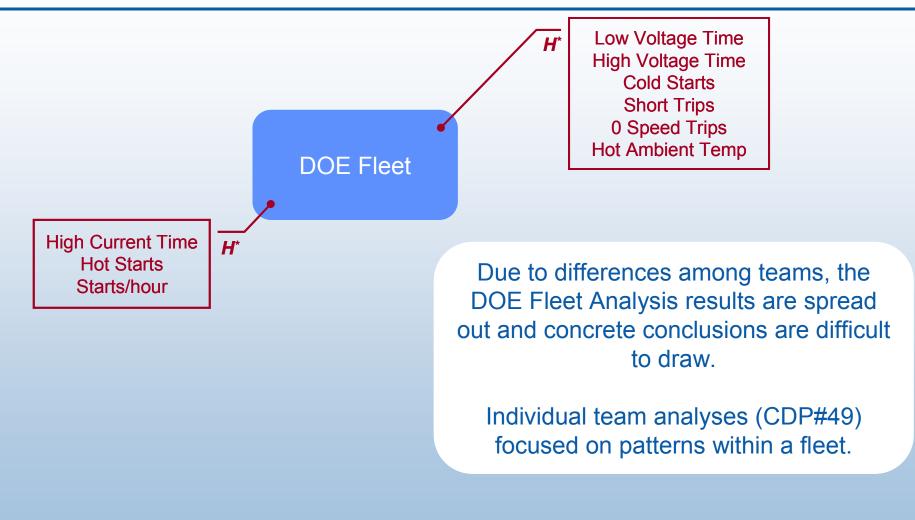

- (1) Range bars created using one data point for each OEM.
- (2) Range (highest and lowest) of the maximum operating hours accumulated to-date of any OEM's individual stack in "real-world" operation.
- (3) Range (highest and lowest) of the average operating hours accumulated to-date of all stacks in each OEM's fleet.
- (4) Projection using on-road data degradation calculated at high stack current. This criterion is used for assessing progress against DOE targets, may differ from OEM's end-of-life criterion, and does not address "catastrophic" failure modes, such as membrane failure.
- (5) Using one nominal projection per OEM: "Max Projection" = highest nominal projection, "Avg Projection" = average nominal projection. The shaded green bar represents an engineering judgment of the uncertainty due to data and methodology limitations. Projections will change as additional data are accumulated.

Created: Feb-26-08 11:46 AM

### Approach: Use Multivariate Analysis to Determine Dominant Factors Affecting FC Degradation

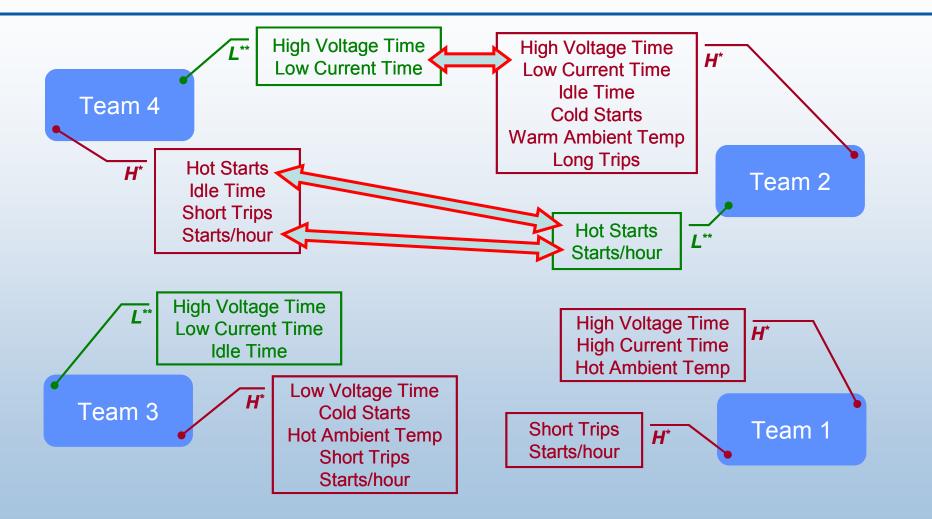

### Primary Factors Affecting Learning Demo Fleet Fuel Cell Degradation: FC Diversity (Between Teams) Limits Drawing Strong Conclusions

- 1) On-going fuel cell degradation study using Partial Least Squares (PLS) regression model for combined Learning Demonstration Fleet.
- 2) DOE Fleet model has a low percentage of explained decay rate variance.

H\*: Factor group associated with high decay rate fuel cell stacks L\*\*: Factor group associated with low decay rate fuel cell stacks

# Primary Factors Affecting Fuel Cell Degradation are Hard to Extract, and Different (sometimes opposite) for Each Team

1) On-going fuel cell degradation study using Partial Least Squares (PLS) regression model for each team.

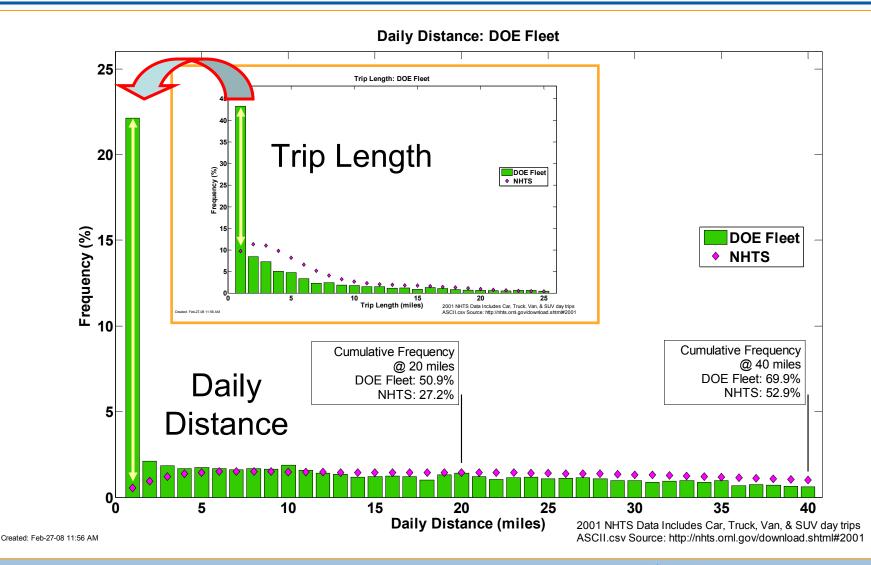

Created: Feb-27-08 12:17 PM

2) Teams' PLS models have a high percentage of explained decay rate variance, but the models are not robust and results are scattered.

H\*: Factor group associated with high decay rate fuel cell stacks L\*\*: Factor group associated with low decay rate fuel cell stacks

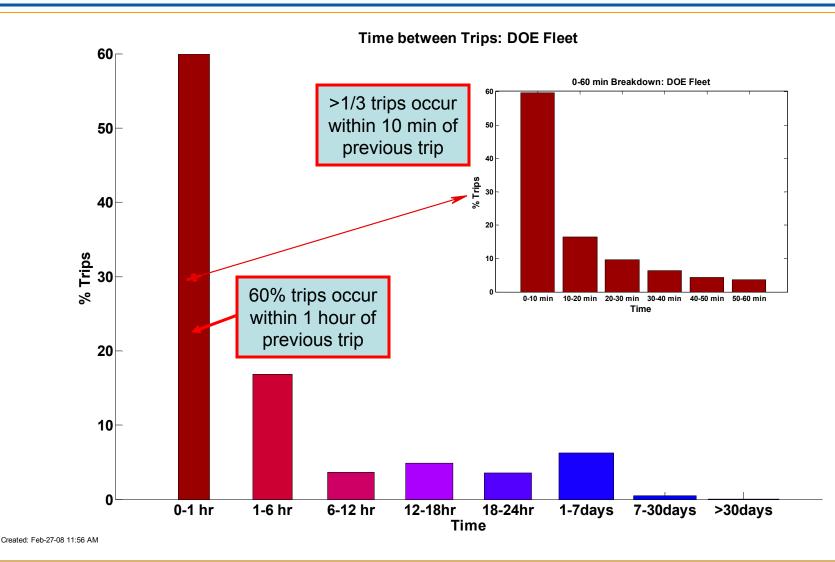

# Large Number of Short Trips Contribute to a Lower Daily Distance than National Average

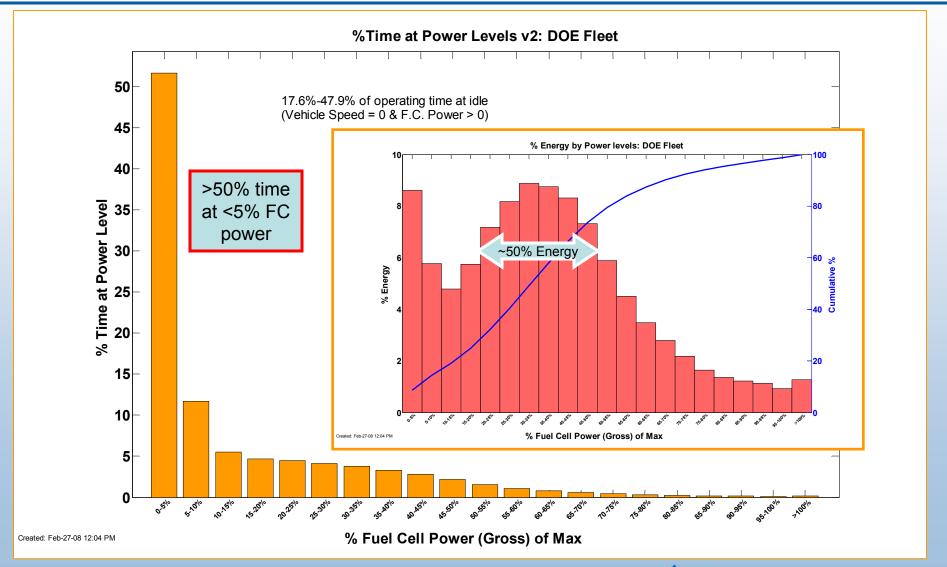

# **Examining Time Between Trips Shows Fuel Cells Experiencing Large # Hot Starts**

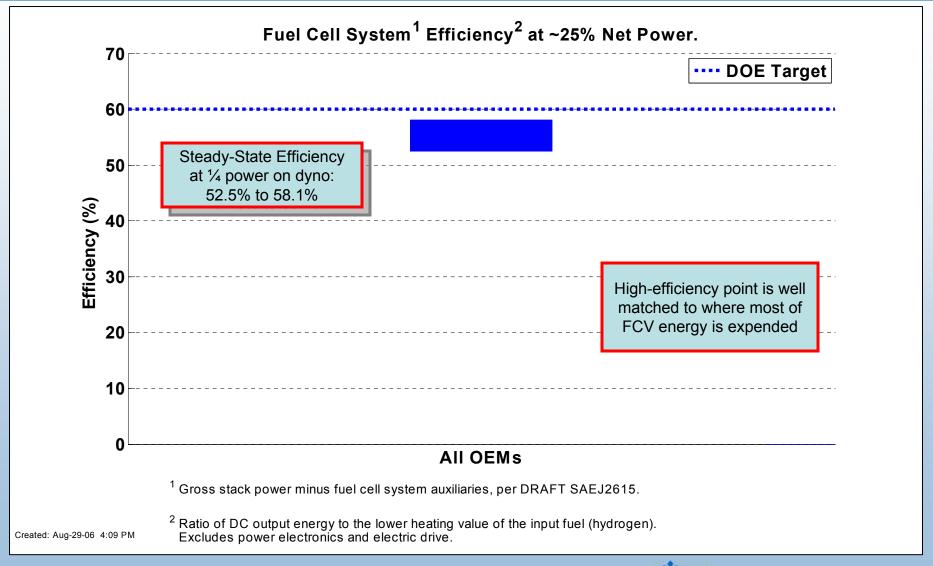

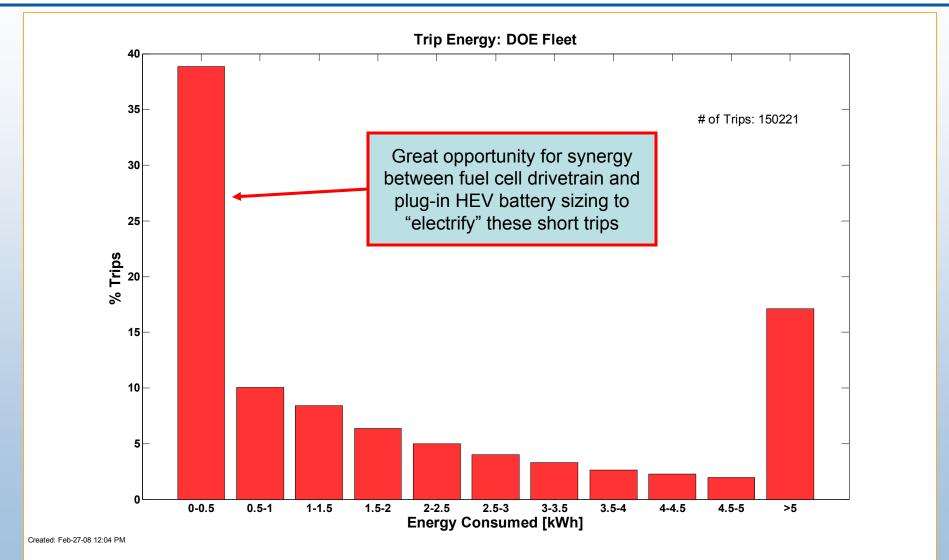

# While Most of FC *Time* is Spent at Idle, Bulk of *Energy* is at 20-50% Power

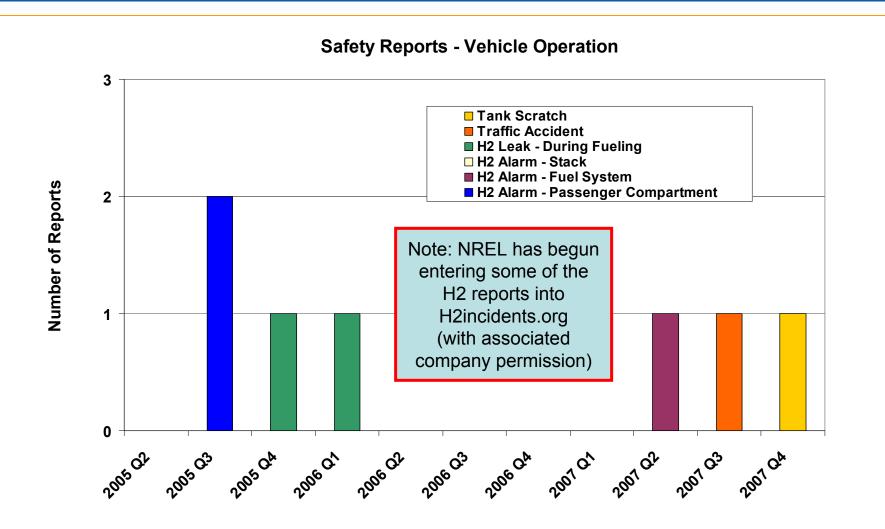

### Gen 1 Baseline Dyno Tests Validated High Efficiency at <sup>1</sup>/<sub>4</sub> Power Point – Gen 2 Tests to Occur in 2008

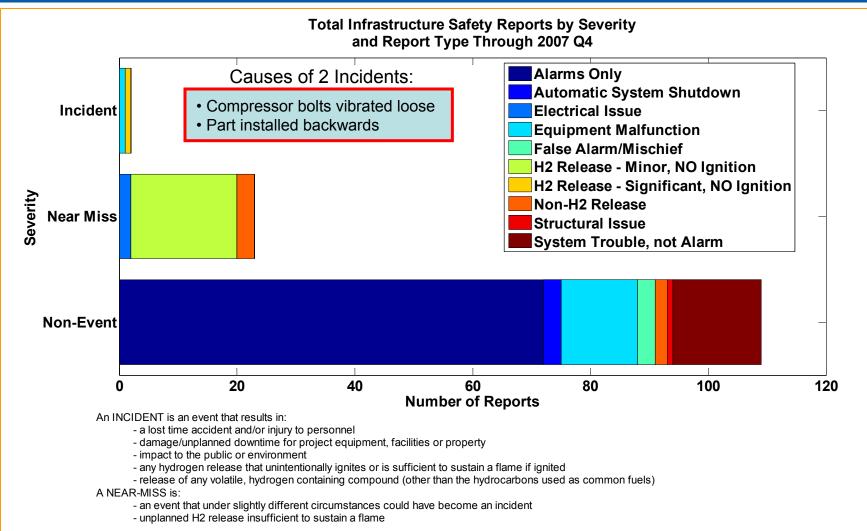

# ~40% of Learning Demo Trips Require <0.5 kWh of Fuel Cell Output Energy

## Minimal Vehicle Safety Reports Continue to Demonstrate a Strong Safety Record

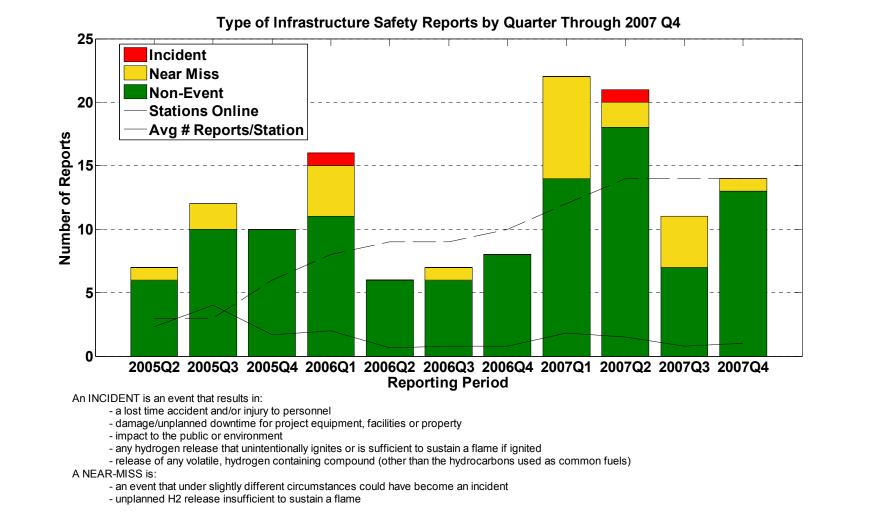

### Most of Infrastructure Safety Reports Continue to Be Non-Events (and Most of Those, Alarms Only)

Created: Feb-15-08 1:24 PM

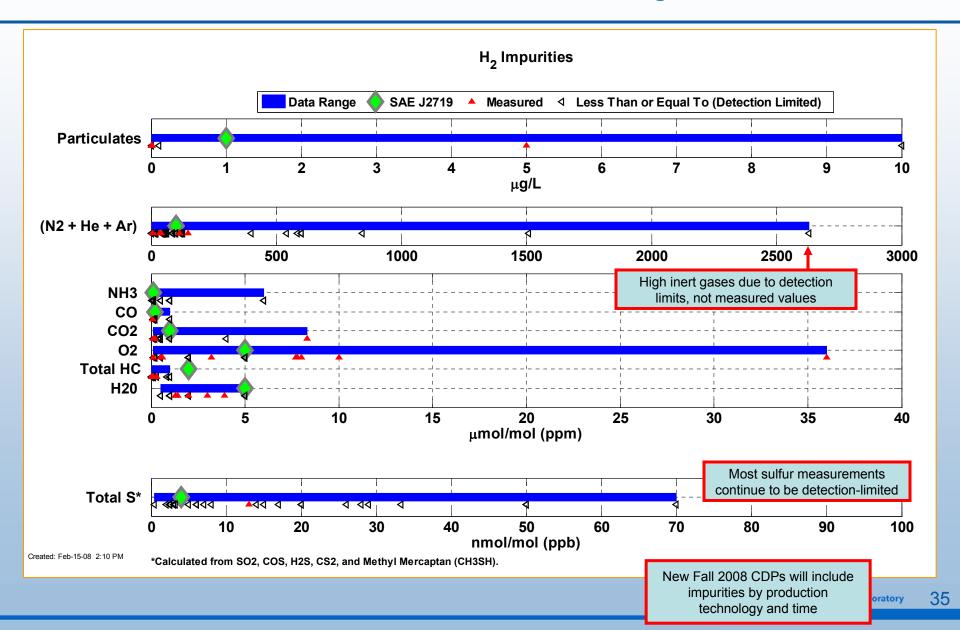

### **Overall Infrastructure Safety Reports Correlated with Increase in New Stations Coming Online**

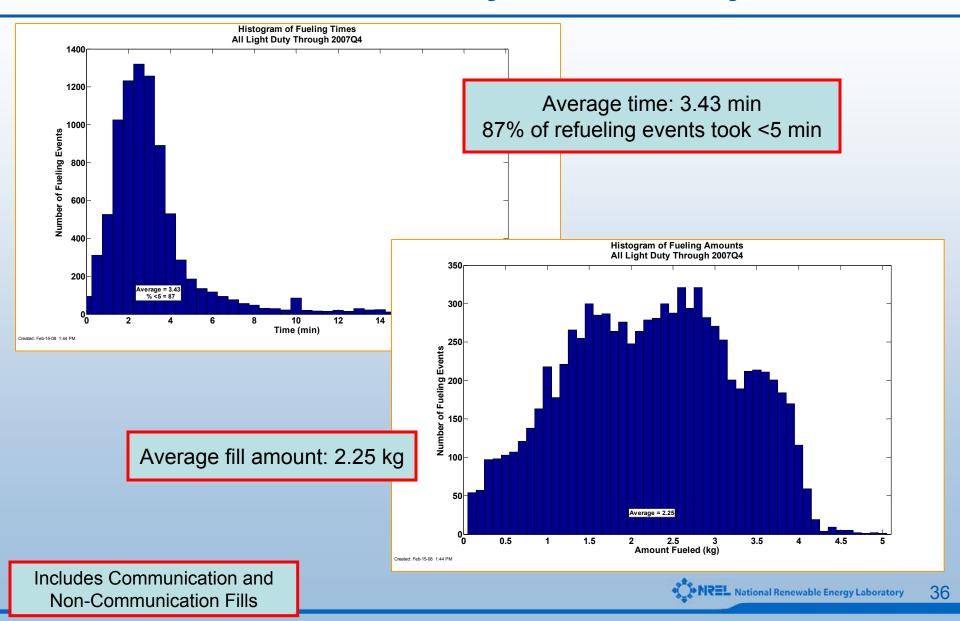

Created: Feb-15-08 1:24 PM

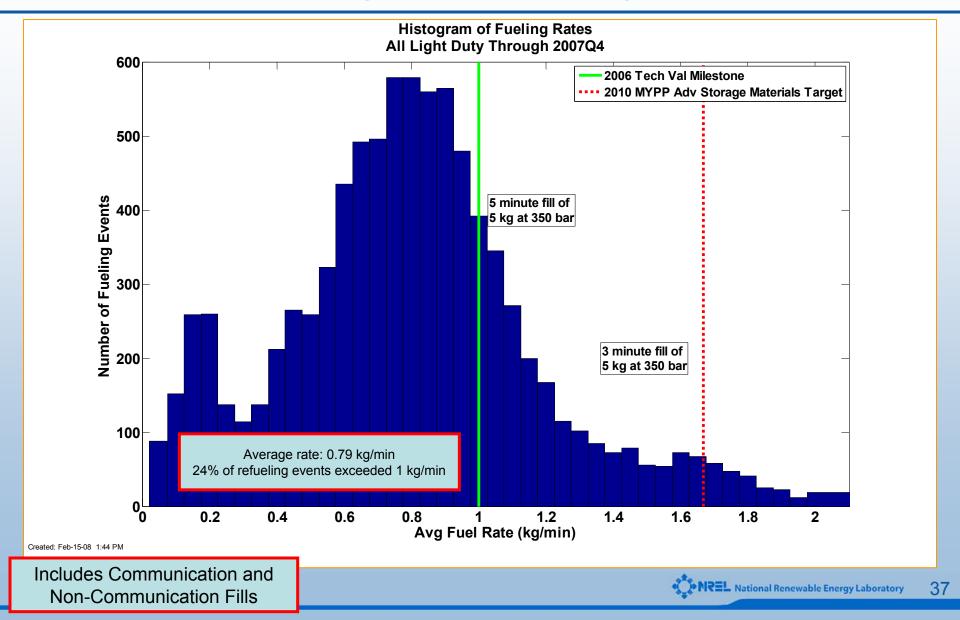

### Hydrogen Impurities Sampled from All Stations to Date In General, Inert Gases and Sulfur Have Had High Detection Limits

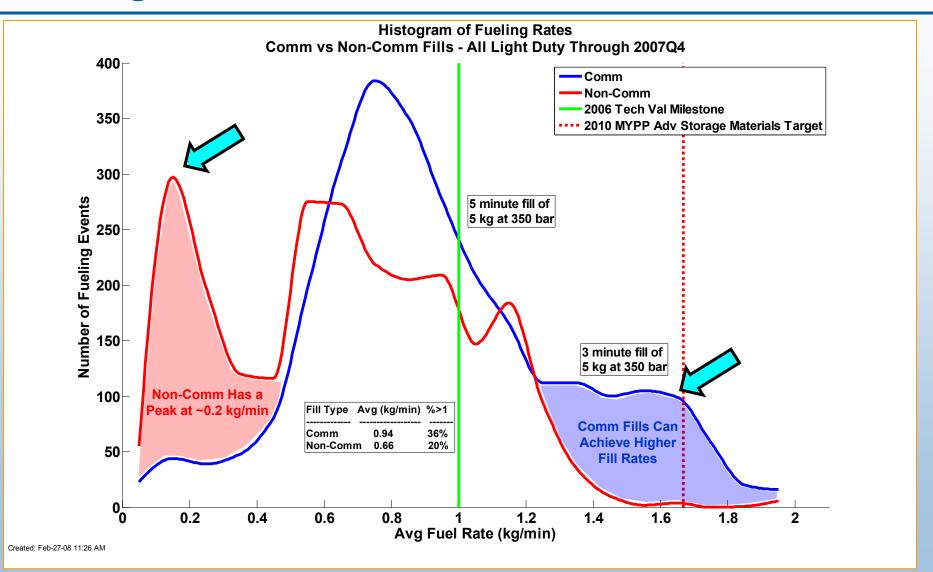

# Actual Vehicle Refueling <u>Times</u> and <u>Amounts</u> from 8,700 Events: Measured by Stations or by Vehicles

### Actual Vehicle Refueling <u>Rates</u> from >8,700 Events: Measured by Stations or by Vehicles

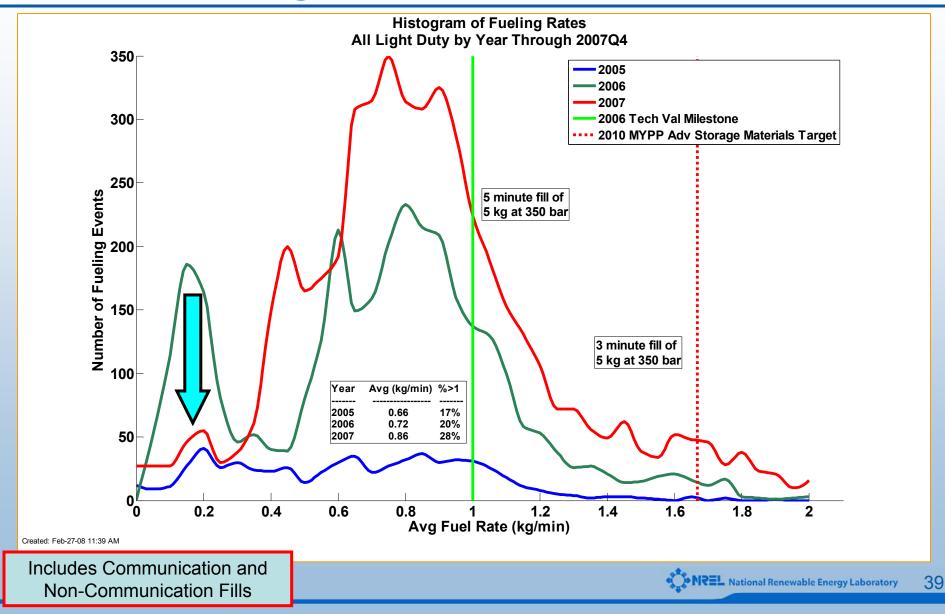

### Communication H2 Fills Achieving Higher Fill Rate than Non-Communication

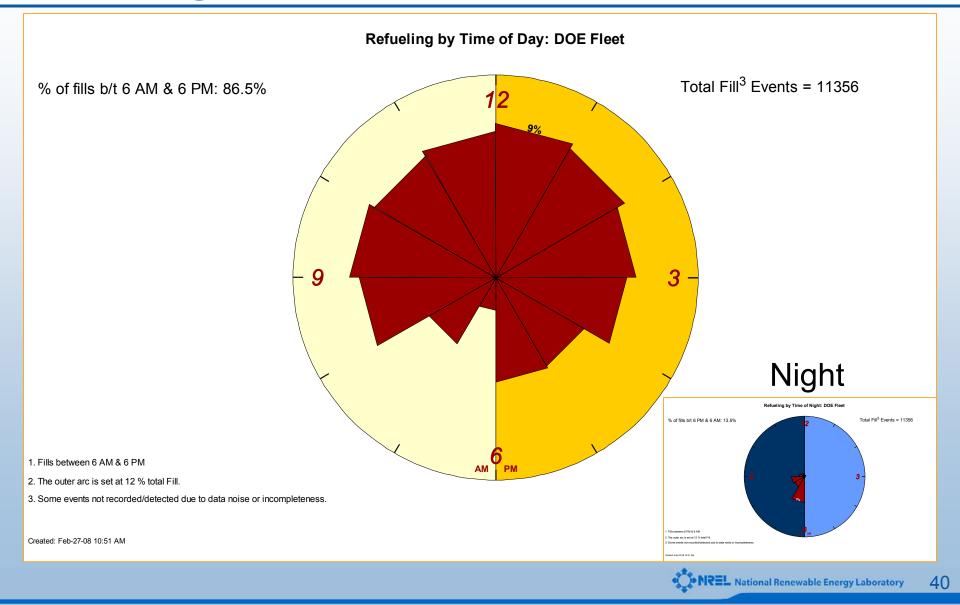

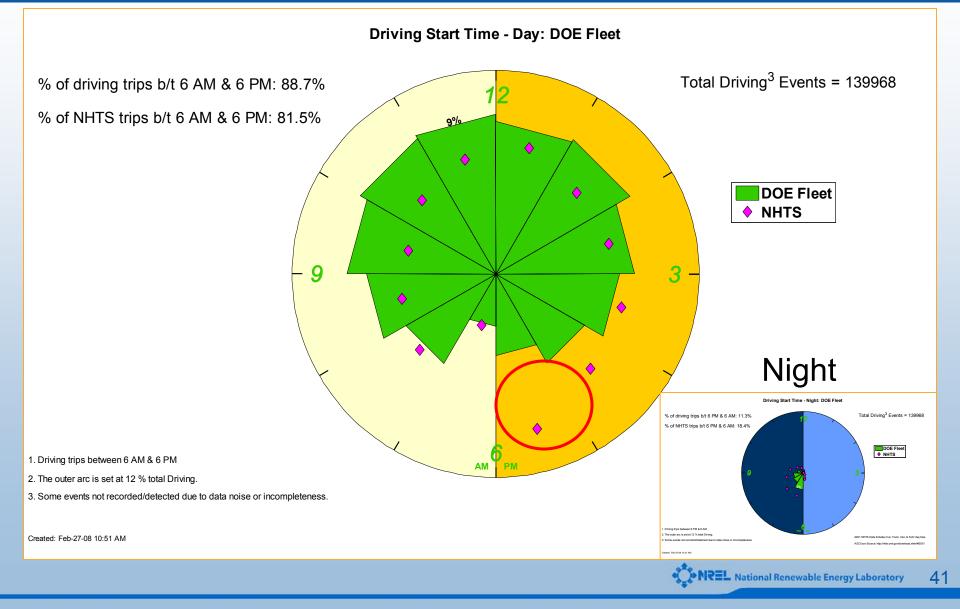

# Examining Refueling Data by Year Shows 0.2 kg/min Rate Phased Out

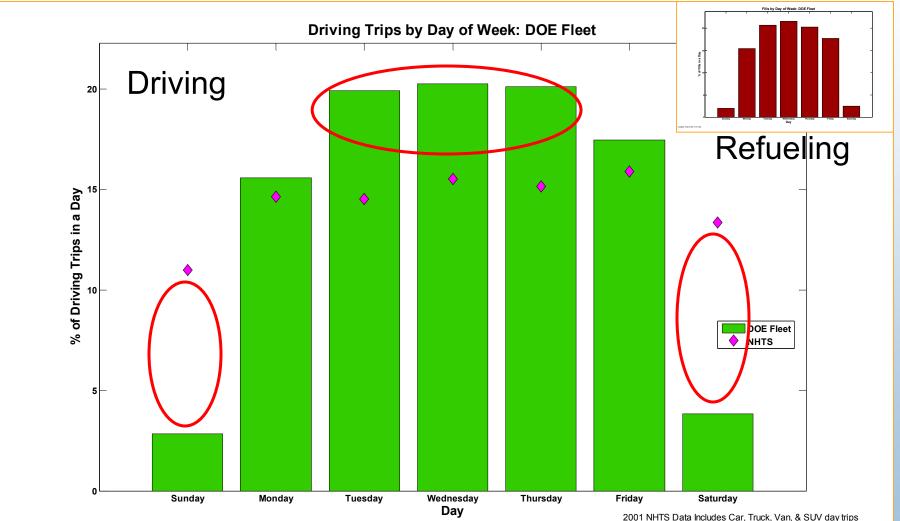

# **Refueling by Time of Day; Relatively Uniform Refueling Infrastructure Demand Between 8-4**

# Driving Trip Start Time – Day; Roughly Matches National Statistics Except for 5-6 PM

### Gen 1 Learning Demo FCV Travel Has Been Primarily Weekday Driving; Differs from NHTS

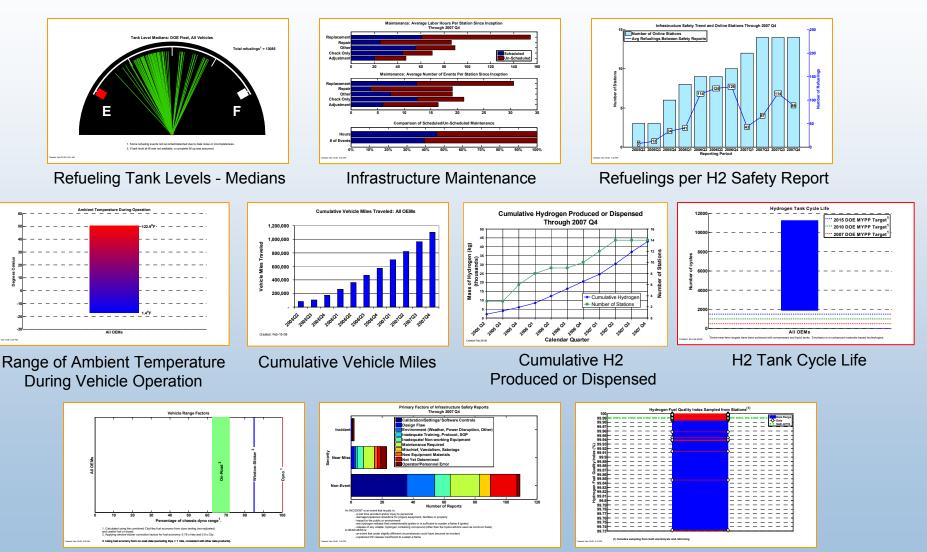

Created: Feb-27-08 10:51 AM

2001 NHTS Data Includes Car, Truck, Van, & SUV day trips ASCII.csv Source: http://nhts.ornl.gov/download.shtml#2001

# **Other CDP Results Not Discussed Here Today**

Effective Driving Range

H2 Safety Primary Factors

H2 Quality Index

# Highlights of Interactions and Collaborations in Last Year

### Auto/Energy Industry Partners

- Site visits with industry (at OEM site or NREL) to discuss detailed results and NREL methodology
- Focused on 2-way sharing of stack degradation multivariate work
- Validated NREL's on-road stack degradation analysis technique and results with two OEMs
- Improved methodology for producing detailed data results and CDPs at same time for easier industry review

### FreedomCAR and Fuel Technical Teams

- H2 Storage (10/07) and Delivery (11/07) Tech Teams
- DOE's Vehicle Technologies Program and HFCIT Program (10/07)

### • US Fuel Cell Council Technical Working Groups

- Transportation Working Group Focus on CA series
- Joint H2 Quality Task Force
- California Organizations
  - CaFCP: NREL will include H2 impurity test results in future CDPs
  - CARB: Discussing data from new stations being sent to NREL for inclusion in analysis results

# **Future Work**

### • Remainder of FY08:

- Continue to investigate correlations of real-world factors influencing fuel cell degradation
- Create new and updated composite data products (CDPs) based on data through June 2008
  - Prepare results for publication at 2008 Fuel Cell Seminar
- For 2<sup>nd</sup> generation vehicles, begin to evaluate improvements in FC durability, range, fuel economy, and safety
- Key upcoming September 2008 DOE MYPP and Joule milestone to validate 250-mile range from 2<sup>nd</sup> generation vehicles
- Support OEMs, energy companies, and state organizations in California in coordinating early infrastructure plans

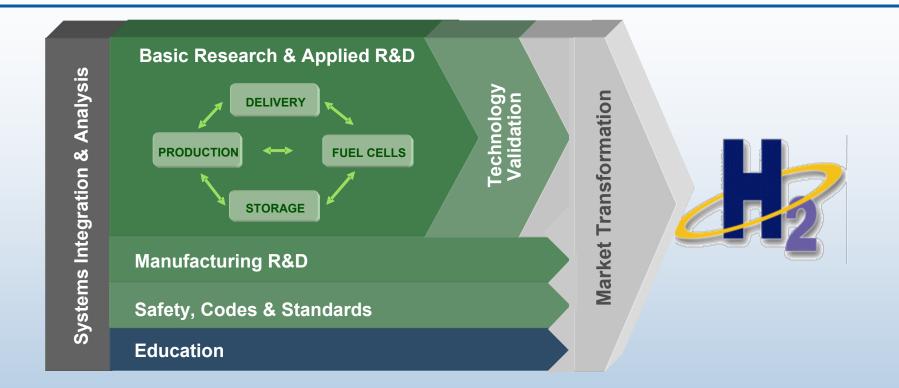

### • FY09:

- Semi-annually (spring/fall) compare technical progress to program objectives and targets and publish results
  - Production cost, production efficiency, FC freeze startup and freeze tolerance, 2<sup>nd</sup> gen stack durability
- Identify opportunities to feed findings from project back into HFCIT program and industry R&D activities to maintain project as a "learning demonstration"
- Help DOE prepare plans for Phase II of project

# Summary

- More than half of project completed
  - 92 vehicles and 15 stations deployed
  - 1.1 million miles traveled, 40,000 kg H<sub>2</sub> produced or dispensed
  - 211,000 individual vehicle trips analyzed
  - Project to continue through 2010
- Examination of Factors Affecting FC Degradation Continues
  - NREL collaborating with each team to understand results and refine inputs and analysis
  - Triggered more thorough analysis of vehicle/stack duty cycles, such as time between trips, trip length, FC power levels
- Total of 47 composite data products published to date
  - This presentation only covered some of the new/updated results
  - Web site allows direct web access to all CDPs
- Roll-out of 2<sup>nd</sup> generation vehicles has begun
  - Most of remaining vehicles to be deployed this year
  - Additional 700 bar stations coming online soon

# **Questions and Discussion**

### Project Contact: Keith Wipke, National Renewable Energy Lab 303.275.4451 keith\_wipke@nrel.gov
