

U.S. Army Research, Development and Engineering Command

*Power & Energy
from an Army Ground Vehicle
Perspective*

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Dr. Peter Schihl

2010 Department of Energy Annual Merit Review

8 June 2010

Agenda

- Army Ground Vehicles Introduction
- War Fighter Outcomes and Power/Energy Needs
- Army Ground Vehicle Challenges
- Engine Emissions Policy
- Networked Energy Concept
- Future Directions

Army Ground Vehicles

- 300,000 + tactical and combat vehicles (150 – 1500 BHP)
- 240,000 + trucks – class 2 thru class 8 + (150 – 500 BHP)
- 40,000 + 2-stroke powered vehicles (200 – 500 BHP)

MRAP - Mine Resistant Ambush Protected

PLS – Palletized Loading System

HEMTT – Heavy Expanded Mobility Tactical Truck

*FVPDS (Jan. 2000)
Fielded Vehicle Performance Data Systems

Army Ground Vehicles

COMBAT VEHICLES

- **M1 Abrams (AGT-1500)**
- **M109/M110 Self Propelled Howitzer (8V71T)**
- **M2/M3 Bradley (VTA-903)**
- **M88 Medium Recovery Vehicle (TCM-1790)**
- **M578 – Light Armored Recovery Vehicle (LRC) – (8V71T)**
- **M60 family (TCM-1790)**
- **Chaparral Missile Launcher (6V53T)**
- **FAASV – Fast Assault Ammunition Supply Vehicle (8V71T)**
- **M551 Sheridan Assault Vehicle (6V53T)**
- **Stryker (3126/C7)**

TACTICAL VEHICLES

- **HET Heavy Equipment Transporter (8V92TA)**
- **HEMTT Heavy Expanded Mobility Tactical Truck (8V92TA)**
- **PLS Palletized Loading System (8V92TA)**
- **2.5 Ton Truck (LD-465/LDT-465)**
- **M939 5 Ton Truck (NHC 250/6CTA8.3)**
- **M915/M916 Line Hauler (NTC400/S-60)**
- **M917, M918, M919 Tractor (NTC 400)**
- **HMMWV (GM 6.2/6.5 IDI)**
- **CUCV Commercial Utility Cargo Vehicle (GM 6.2/6.5 IDI)**
- **Family of Medium Tactical Vehicles (C7)**

LEGEND: **black:** four-stroke diesel **red:** two-stroke diesel **blue:** gas turbine

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

10 Comprehensive Warfighter Outcomes

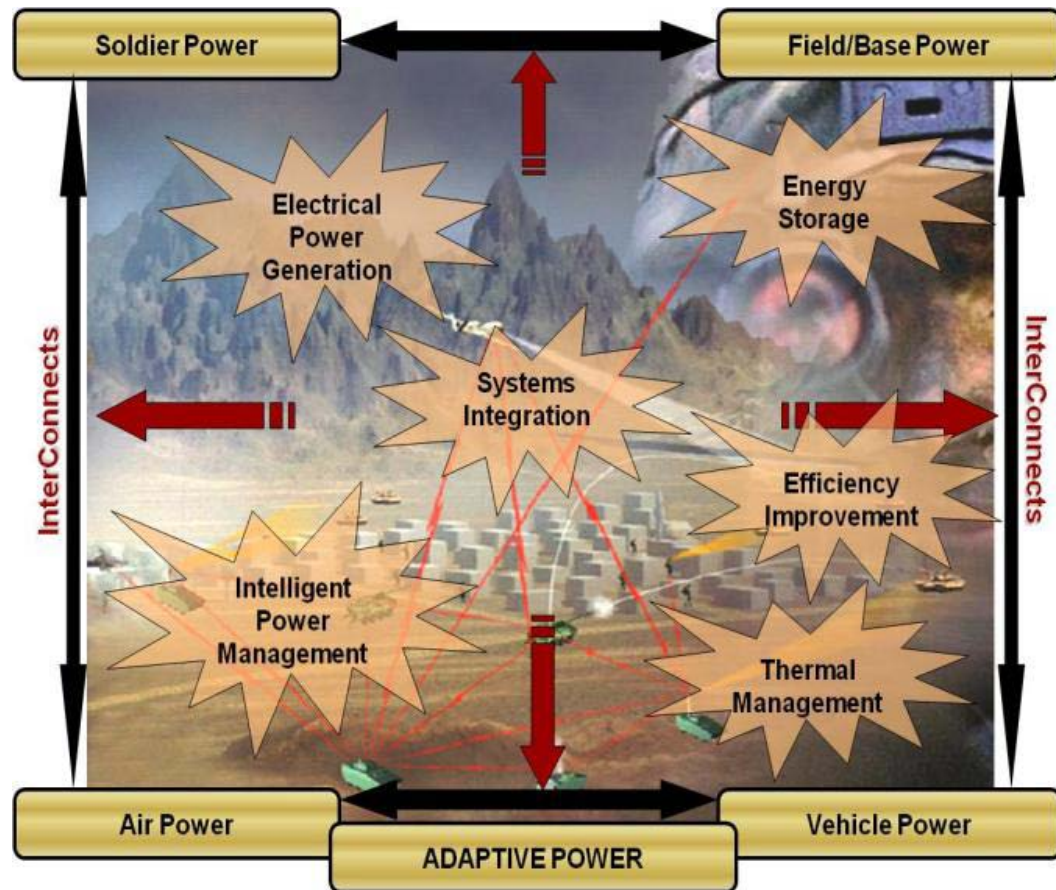

- Battle Command Network
- Counter IED and Mine
- **Power and Energy**
- Human Dimension
- Training
- Force Protection
- Battlespace Awareness
- Force Application
- Logistics
- Unmanned Systems Operations

ASA (ALT)

Power and Energy Warfighter Outcome

- Provide enhanced ability to operate worldwide by reducing by **half, the weight and volume of fuel** associated with powering the force.
- Combat platforms require up to 30 MJ of pulsed power for lethality and **20 percent increase in continuous power** to enable superior tactical mobility, speed and an excess capacity for on/off board electrical power use while **increasing fuel economy by 40 percent**.
- Emerging electrical components and systems require dismounted **Soldiers to possess a fourfold increase of available power**, above current 12.3 Watts-Hr, at half the tactical weight.

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Fuel Economy Economic Driver

U.S. ARMY

RDECOM

**\$10 per barrel
increase in oil
increases
DoD costs by
~\$1.3B per
year**

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Force Structure and Force Protection Driver

Tactical Fuel Logistics & Protection

Kuwait/OIF/OEF Fuel to FOB (Million gallons/yr).....	431
Fuel trucks needed.....	140,075
Convoys needed.....	9,332
Soldiers per convoy trip (Fuel trucks, protection, other support).....	120
Soldier trips.....	644,360
Fewer Soldier trips.....	6,444
(Resulting from 1% Fuel Savings)	

On Board Electrical Power

- Growing need for countermeasures, protection, sensors, ad hoc HVAC, etc.
- Silent watch need; minimal noise
 - In-line starter generators
 - Auxiliary power units
 - Hybrid propulsion architecture
 - Fuel cells
 - Batteries
- Can't impede mobility
 - Dash speed, top speed on grade, high tractive effort to weight cooling
- One solution does not fit all vehicle applications

Army Ground Vehicle Propulsion Challenges

1. Cooling
2. Cooling
3. Cooling
4. Fuel Effects
5. Filtration

The Army vehicle cooling point is high tractive effort to weight under desert-like operating conditions (ex. 5 ton wheeled vehicle ~ 0.6 while 15 ton tracked vehicle ~ 0.7 both at 120 F ambient)

High Power Density Propulsion Systems – Combat Vehicles

- Army definition of Propulsion System **Power Density (PD)**:
 - $PD = \text{sprocket (wheel) power} / \text{total propulsion system volume [bhp/ft}^3\text{]}$
 - Air filtration requirements, thermal management system, transmission, engine (fuel), ducting requirements

Ex. Bradley FIV: $PD = 3$
FCS MGV target: $PD = 6$
Research target: $PD > 8-10$

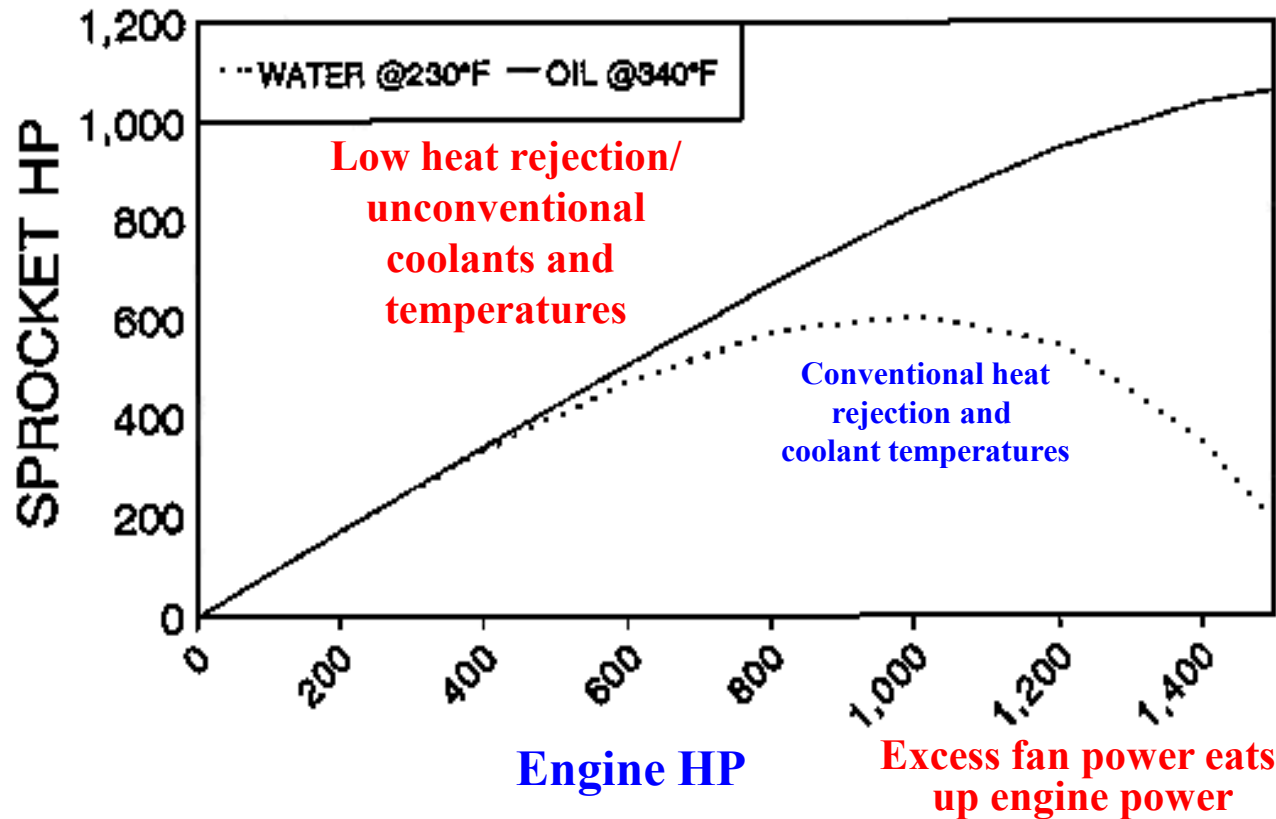

Propulsion System Power Density – Combat Vehicle

Sprocket Hp vs Engine Hp Ambient Air 120°F

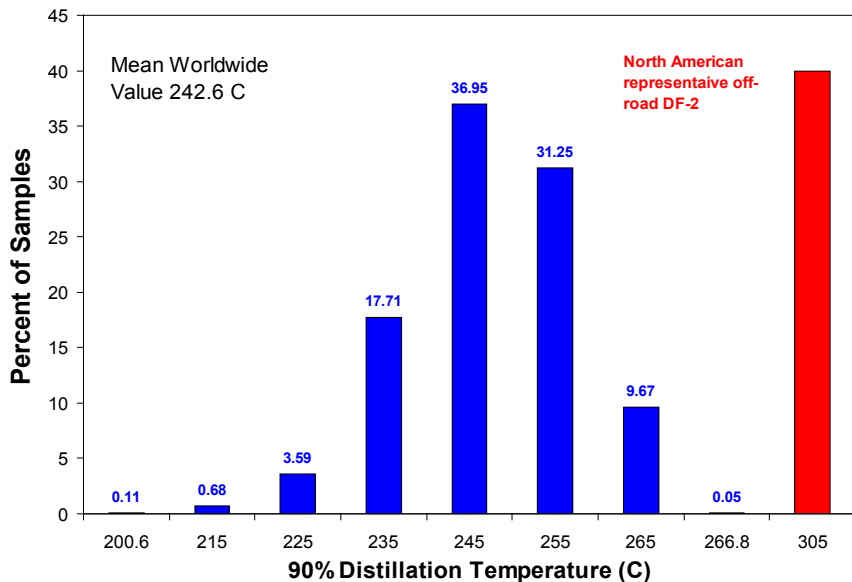

JP-8 Property Specifications

- **Sulfur content: max. 3000 ppm**
- Aromatics: max. 25%
- Specific gravity: 0.775 – 0.84
- Evaporation Characteristics:
 - 10% recov.: max. 205 C
 - End point: max. 300 C
- Net Heating Value: min. 42.8 MJ/kg
- **Cetane Index: none**

JP-8 Cetane Index Worldwide Trend in 2007

Engine Emissions Policy

- The Army can not buy 2007 or Tier IV (> 75 bhp) compliant COTS engines and directly integrate into current and new heavy-duty vehicles.
- Combat vehicle: permanent armor/attached weapon system – National Security Exemption (NSE) via **40 CFR, 89.908**
- ‘Tactical Vehicles’
 - ✓ Without ARMOR – NSE from 2004 and 2007 standards (i.e. meet 1998) and Tier IV
 - ✓ With ARMOR – NSE from ALL standards

Engine Emissions Solution Pathways

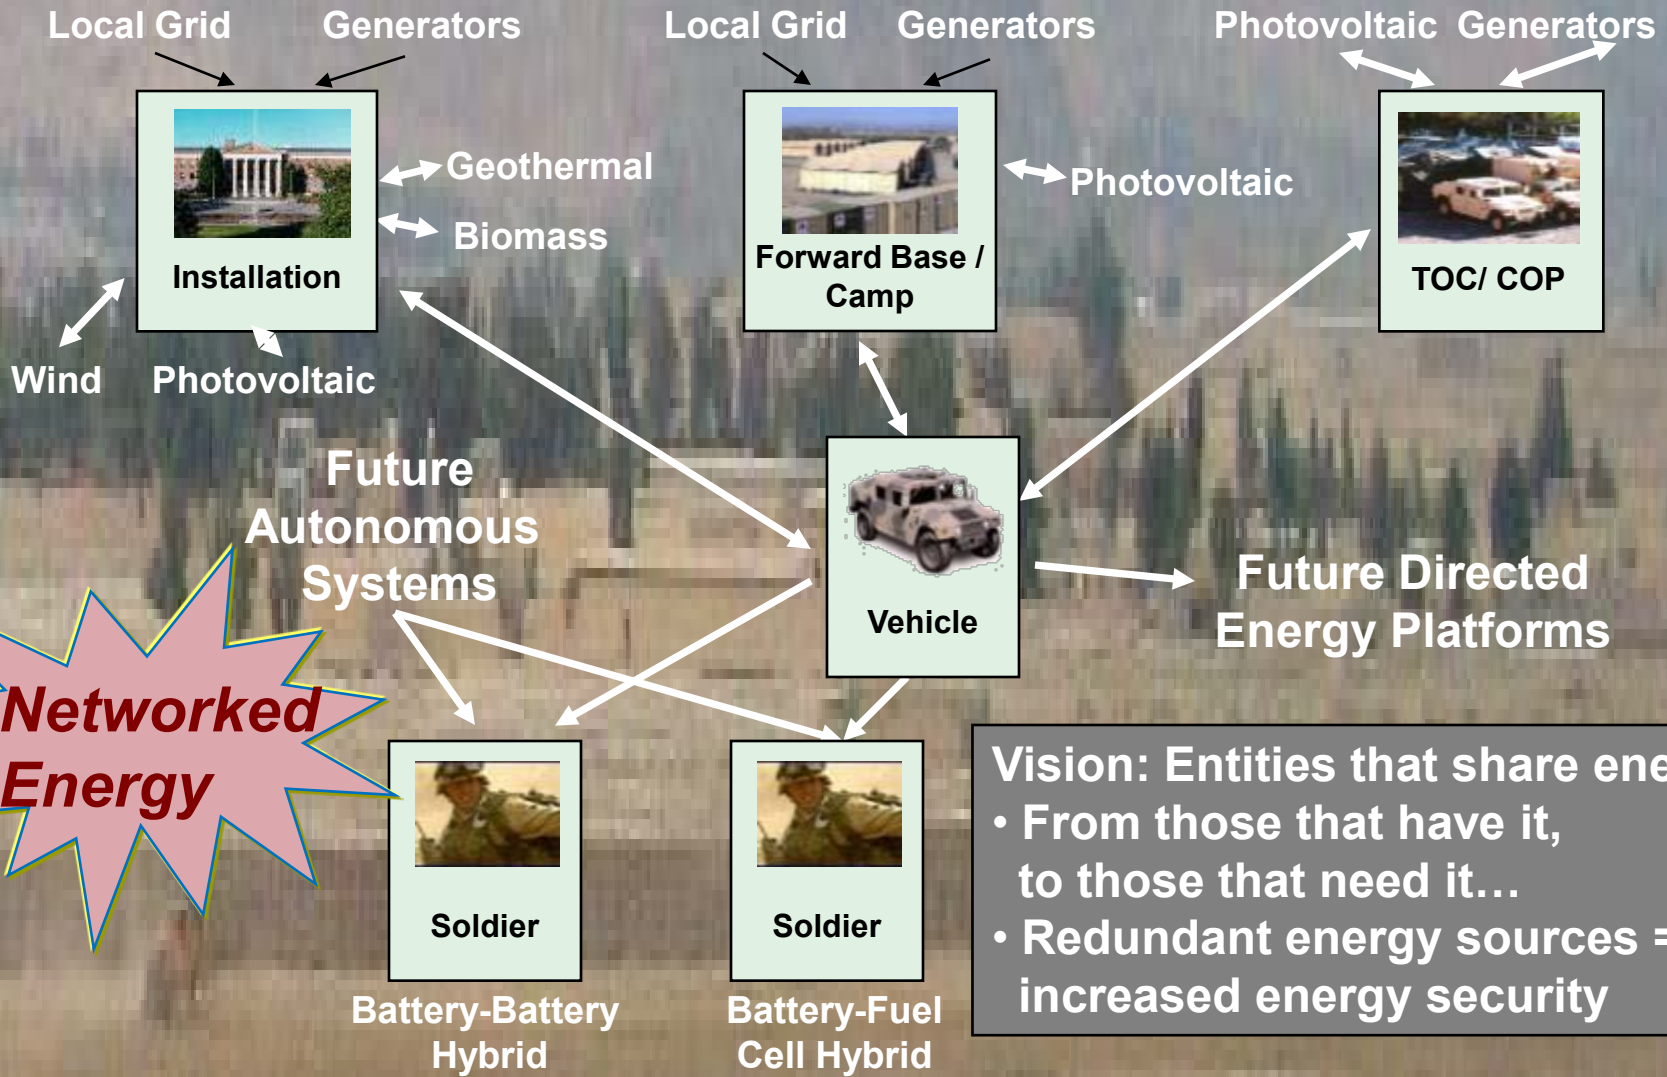

- Near term
 - Modified on-road COTS minus cooled EGR and exhaust aftertreatment
 - TIER II or TIER III engines
- Mid term
 - Modified on-road COTS and TIER IV minus cooled EGR and exhaust aftertreatment
 - Tier II or TIER III engines
- Long term
 - unknown

Concept for Networked Energy

Ground Vehicle Power and Energy Future Directions

- Advanced Propulsion System
 - Low heat rejection and high power to weight ratio engines; propulsion materials
 - Heavy-fuel flexible and more efficient engines
 - More efficient transmissions
 - Longitudinal and cross-drive; wider ratio
 - Hybrid propulsion for mission specific applications
 - Energy Recovery Systems
- On-Board Electrical Power
 - In-line starter generators, auxiliary power units, fuel cells
 - High energy and power density batteries

THANK YOU!

Power and Energy Strategy for Future Directions

RDECOM Strategic Directions in Power and Energy

Higher Energy Power Sources for
Soldiers and Sensors

Unmanned Air and Ground Platforms

Intelligent Energy Management with
Alternative Energy Sources

Ground Platforms Auxiliary Power and
Quiet Watch Capabilities

High Energy Weapons

DDR&E Energy and Power Areas of Opportunity

Tactical Energy Independence

Autonomous Platform Power

Grid Power Distribution & Control

Platform Efficiency & Environmental
Impact

Electric Weapons & High Power Sensors

Strategy for Future Directions

Higher Energy Power Sources for Soldiers and Sensors

Rucksack Portable Power System

Intelligent Energy Management Coupled with Alternative Energy Sources for Reduced Logistical Burden (Combat Outposts)

Unmanned Air and Ground Platforms

Reformed Methanol Hybrid Fuel Cell

**Ground Combat & Tactical Vehicles
Vehicle Auxiliary Power and Quiet Watch Capabilities**

Trojan Vehicle Fitted with Rolls-Royce APU

High Energy Weapons

Power & Energy Technology Gaps

C4ISR & Soldier

High Density Storage for Soldiers and Platforms

Logistic Fuel Conversion for Auxiliary Power Sources

Efficient, High Density Alternative Energy Capture and Conversion

Ground

Power Sources and Conversion for Small Autonomous Systems

On Board Power-Higher Density, Higher Power Mechanical To Electrical Conversion
