

# Technology Validation: Fuel Cell Bus Evaluations

2011 DOE Annual Merit Review Leslie Eudy, National

Renewable Energy Laboratory

May 13, 2011

Project ID# TV008

This presentation does not contain any proprietary, confidential, or otherwise restricted information

NREL is a national laboratory of the U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, operated by the Alliance for Sustainable Energy, LLC.

# **Overview**

#### Timeline

- Project started in FY03
- First-generation FCBs completed in FY10
- Second-generation FCBs began in Q4 FY09

#### **Budget**

- Pre-FY2010 Funding
  - DOE share: \$1.777 M (7 yr)
- FY 2011: \$300K
- FY 2010: \$200K
- Additional funding from DOT/Federal Transit Admin.

#### Tech. Val. Barriers

A. Lack of fuel cell vehicle performance and durability data

#### C. Lack of H<sub>2</sub> fueling infrastructure performance and availability data

D. Need for maintenance and training facilities

#### **Partners**

- Fleets: Operational data, fleet experience
- Manufacturers: Vehicle specs, data, and review
- Fuel providers: Fueling data and review

Overall: Validate fuel cell technologies in transit applications

- Analyze fuel cell bus (FCB) performance and cost compared to conventional technologies to measure progress toward commercialization
- Provide "lessons learned" on implementing fuel cell systems in transit operations to address barriers to market acceptance
- Harmonize data collection efforts with other FCB demonstrations worldwide (in coordination with FTA and other U.S. and international partners)

#### 2011

- Complete analysis and report results on first-generation FCBs
- Document FC hours more than 8,000 and 2x fuel economy compared to baseline technology
- Continue data collection and analysis for next-generation fuel cell buses at Burbank, SunLine, and AC Transit
- Conduct crosscutting analysis of FCB status at all sites

### **Evaluation Approach**

- Data collection & analysis at transit sites
  - Follows standard protocol
  - Uses cost-effective process with data already collected by agency
  - Includes data on baseline vehicles in same service
  - Builds database of evaluations/results
- Annual FCB Status report
  - Includes summary of data across all sites
  - Assesses progress and needs for continued success
- Expansion of data collected and analyzed as resources allow

### **Approach - Milestones**

- Complete evaluations of first-generation FCBs
  - Santa Clara VTA: completed in FY07
  - AC Transit: completed in FY09
  - SunLine: completed in FY09
  - **CT**TRANSIT: completed in FY10
  - Overall assessment of first-generation
    FCBs: September FY10

- SunLine: May 2010
- AC Transit: June 2010
- City of Burbank: April 2011
- Other FTA-funded FCBs
- Key Q2FY11 DOE milestone for FCBs: Document FC hours >8,000 and 2x fuel economy compared to baseline: Mar 2011

#### **Performance Targets for FCBs**

Comparison of FCBs to baseline technology

- Performance characteristics: match or exceed conventional bus technology
- Bus use: monthly miles > 3,000
- Fuel economy: exceed conventional buses by at least 2X
- Availability: better than 85%
- Reliability: miles between roadcall (MBRC):
  - > 4,000 miles for all roadcalls
  - > 10,000 miles for propulsion related roadcalls
  - FC system 20,000 to 30,000 hours
- Costs: capital, fueling, and maintenance

# **Summary for Early Gen FCBs**

| Site                    | VTA                            | AC Transit                 | SunLine                   | CTTRANSIT                 |         |  |
|-------------------------|--------------------------------|----------------------------|---------------------------|---------------------------|---------|--|
| Technology              | Ballard/Gillig<br>(non-hybrid) | UTC Power/Van<br>Hool/ISE  | UTC Power/Van<br>Hool/ISE | UTC Power/Van<br>Hool/ISE |         |  |
| Project Status          | Complete,<br>Buses Retired     | Complete,<br>Buses Retired | In operation              | In operation              | Totals  |  |

| Fuel economy difference | -12%                           | 65%                        | 134%                      | 41%                       |         |  |

Note: Blue shaded columns indicate completed projects – data are final

Same FCB Technology at these three locations

NATIONAL RENEWABLE ENERGY LABORATORY

# **Data Summary: Baseline Comparison**

# Data from UTC Power/Van Hool buses in service at 3 sites

- Buses went into service in 2006
- UTC Power used early results to optimize FC system
- In 2008, a new version of FC system was installed on all 5 buses
- Data presented on new FC systems

**Fuel Economy** 

1.5X

**CTTRANSIT** 

**FCB** 

9

8

7

6

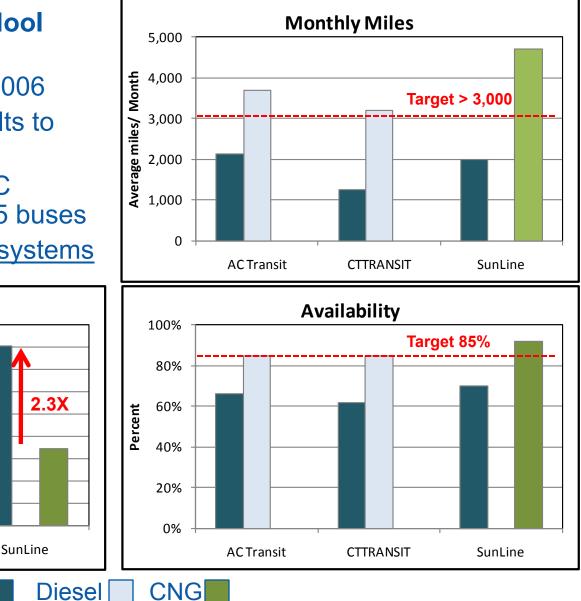

5

4

3 2

1 0

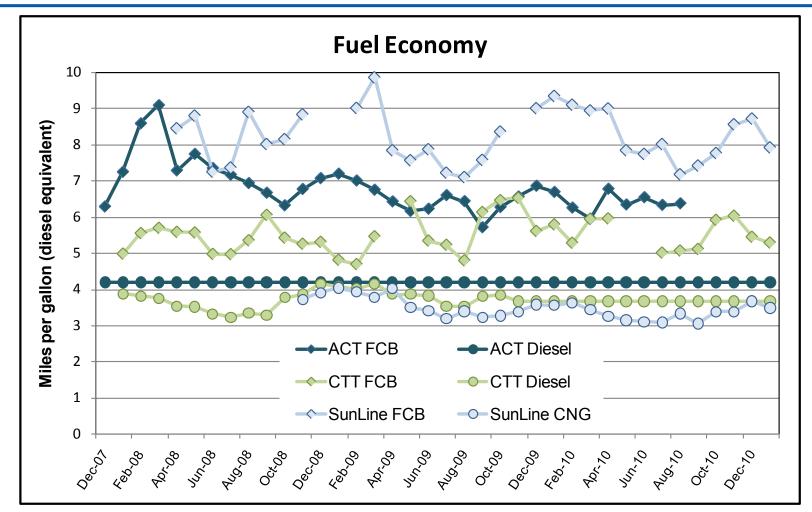

MPG (diesl equiv.)

1.6X

**ACTransit** 

# **Data Summary: Baseline Comparison**

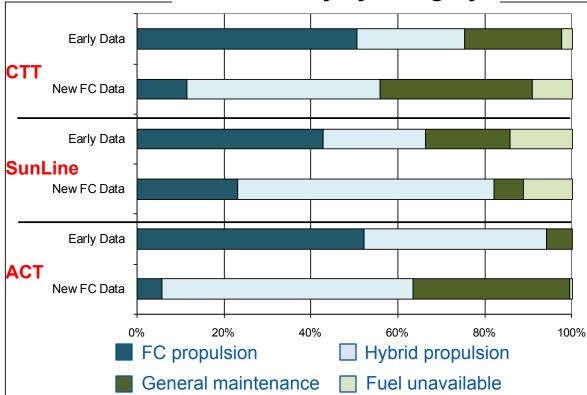

- FCBs have consistently achieved higher fuel economies than baseline buses
- Fuel economy is highly dependent on duty cycle: Average speed for SunLine – 13 mph; AC Transit – 10 mph; CTTRANSIT – 6 mph
- Monthly data show seasonal variations due to A/C use

# **Data Summary: FC System Comparison**

| Site                    | Period     | Months | No. of<br>Buses | Planned Days<br>Days Avail. |       | % Avail. |  |  |  |  |  |
|-------------------------|------------|--------|-----------------|-----------------------------|-------|----------|--|--|--|--|--|
| Early FC System Results |            |        |                 |                             |       |          |  |  |  |  |  |
| AC Transit              | 4/06-10/07 | 19     | 3               | 1,246                       | 720   | 58       |  |  |  |  |  |
| SunLine                 | 1/06-3/08  | 27     | 1               | 653                         | 432   | 66       |  |  |  |  |  |
| <b>CT</b> TRANSIT       | 4/07-12/07 | 10     | 1               | 1 192                       |       | 45       |  |  |  |  |  |
| New FC System Results   |            |        |                 |                             |       |          |  |  |  |  |  |
| AC Transit              | 11/07-4/10 | ~27    | 3               | 1,857                       | 1,226 | 66       |  |  |  |  |  |
| SunLine                 | 4/08-7/10  | 28     | 1               | 746                         | 500   | 67       |  |  |  |  |  |
| <b>CT</b> TRANSIT       | 1/08-7/10  | 31     | 1               | 707                         | 446   | 63       |  |  |  |  |  |

Availability is a measure of bus reliability.

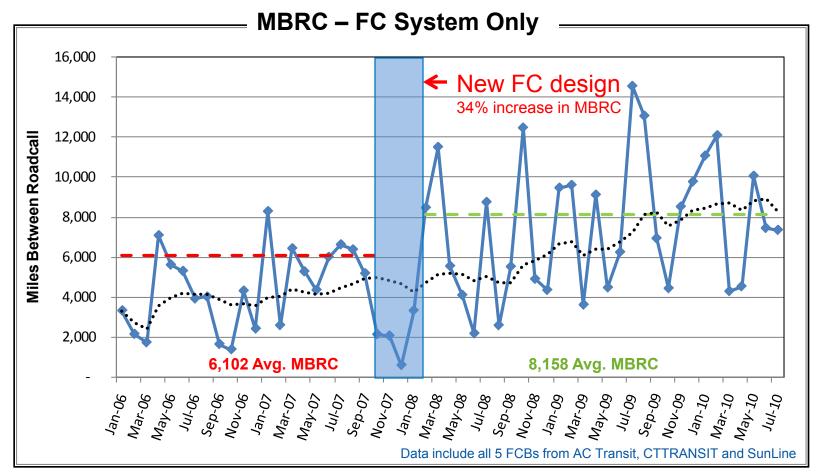

Availability = Planned operation days compared to actual operation days

**Unavailability by Category** 

- Availability of new FC system shows an increase
- Unavailability not typically due to fuel cell issues
- Traction battery and hybrid issues most common reasons for unavailability

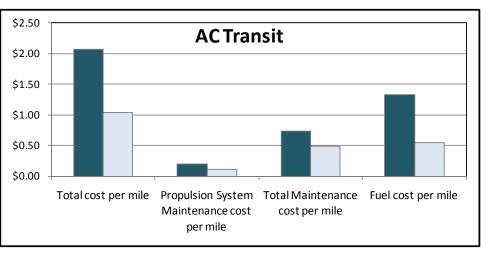

### **Data Summary: FC System Comparison**

- Chart shows the monthly MBRC for the FC system only and highlights the increase over time
- 34% increase in average since new FC systems were installed
- Black dotted line shows running 12-month average FC MBRC

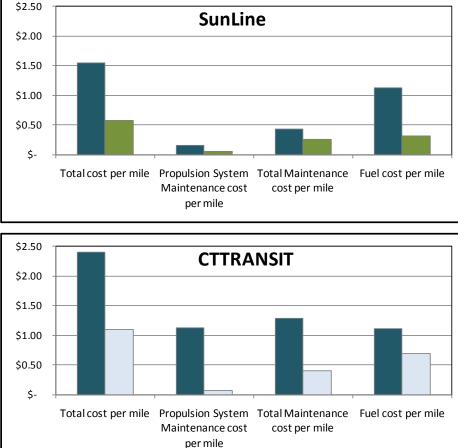

### **Data Summary: Costs**

- Capital costs of buses dropping; larger quantity orders should help
  - First-generation \$3.2M
  - Next-generation \$2.27M
- Fuel costs remain higher
- Operational costs still higher

| Fuel Costs<br>(per kg or gallon) |  |  |  |  |  |  |  |
|----------------------------------|--|--|--|--|--|--|--|
| \$8.00                           |  |  |  |  |  |  |  |
| \$2.29                           |  |  |  |  |  |  |  |
| \$5.29                           |  |  |  |  |  |  |  |
| \$2.70                           |  |  |  |  |  |  |  |
| \$8.00                           |  |  |  |  |  |  |  |
| \$1.07                           |  |  |  |  |  |  |  |
|                                  |  |  |  |  |  |  |  |

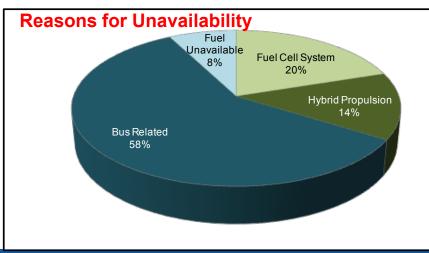

NATIONAL RENEWABLE ENERGY LABORATORY

### **Data Summary: Next-Generation FCBs**

#### SunLine — Palm Springs, California Status: in progress

- New Flyer/Bluways bus with Ballard fuel cell system
- Same design as the BC Transit 20-bus fleet
- Bus went into service May 27<sup>th</sup>
- More than 9,600 miles accumulated, >800 fuel cell hours
- Average hours/day: 7.37
- Max hours in one day: 14.4
- 5.75 mi/kg, 6.5 mi/DEG: 2 times CNG baseline buses
- First report published in March 2011

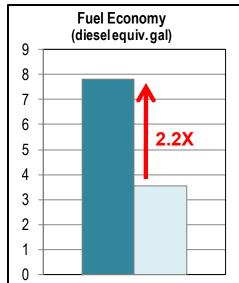

# **Data Summary: Next-Generation FCBs**

#### CTTRANSIT — Hartford, Connecticut Status: in progress

- Next generation, 40-ft Van Hool/UTC Power
- Fuel cell dominant hybrid system
- Four buses delivered and in operation
- Will provide cold weather data on system
- Buses have logged more than 11,000 miles
- 858 total FC hours
- 6.92 mi/kg; 7.82 mi/DGE at 13.7 mph average speed

# Data Summary: Next Gen FCBs

#### AC Transit — Oakland, California

- Zero Emission Bay Area (ZEBA) demonstration led by AC Transit
- Next-generation, 40-ft Van Hool/UTC Power
- 7 of 12 buses delivered
- 3 first generation buses retired. Two of those fuel cell power systems were transferred into new buses (one > 8,500 hrs.)

#### BurbankBus — Burbank, California

- CARB funded development and demonstration project
- Proterra FCB, battery dominant, plug-in hybrid
- Hydrogenics fuel cells and lithium titanate batteries

### Collaborations

- Transit agencies provide data on buses, fleet experience and training, and review reports
  - California: AC Transit, BurbankBus, Golden Gate Transit, Santa Clara VTA, SamTrans, SunLine, San Francisco MTA
  - Connecticut: CTTRANSIT
  - South Carolina: Central Midlands RTA, USC
- Manufacturers provide some data on buses and review reports
  - Bus OEMs: Proterra, Van Hool, New Flyer
  - FC OEMs: Ballard, Hydrogenics, UTC Power
  - Hybrid system OEMs: BAE Systems, Bluways
- Other organizations share information and data
  - National: CARB, NAVC, CTE, Calstart
  - International: Various organizations from Germany, Iceland, Brazil, Canada, China, Japan, England, Australia

#### Planned FCB Evaluations for DOE and FTA

- Estimate of NREL data collection/evaluation schedule
- Schedule subject to change based on progress of each project

### **Future Work**

- Remainder of FY 2011
  - Continue data collection on next-generation FCBs at AC Transit, SunLine, and City of Burbank
  - Continue data collection on FCBs developed under the FTA program
  - Complete first crosscutting analysis of next-generation
    FCBs at all sites
- FY 2012
  - Analyze data and report on new FCBs at Burbank, SunLine, and AC Transit
  - Complete annual crosscutting analysis across sites
  - Continue coordinating data collection activities with FTA

# Summary

- Completed data collection and analysis of early generation FCBs in real-world service at three transit agencies
- Documented progress achieved including:
  - Fuel economy improvement over conventional technology > 2 times (depending on duty cycle)
  - Planned service increasing: buses operating up to 19 hrs/day, 7 days/week
  - Durability: FC hours over 8,500
  - Reliability: MBRC increase of 34% for FC system shows significant improvement
- Provided results to stakeholders/industry: published 4 reports and 3 fact sheets since the last AMR
- Documented remaining challenges for the industry including:
  - Increase durability of FC
  - Optimization of hybrid system & reliability of components (batteries, converters, software)
  - Training/transition of all maintenance to transit staff
  - Ramp up of fueling to supply larger fleets
  - Cost reduction: capital and operating
