

### California Hydrogen Research Consortium

Jennifer Kurtz, Sam Sprik, Mike Peters, Bill Buttner, Shaun Onorato National Renewable Energy Laboratory Presentation Date

DOE Hydrogen and Fuel Cells Program 2019 Annual Merit Review and Peer Evaluation Meeting

Project ID H2041

This presentation does not contain any proprietary, confidential, or otherwise restricted information.

### Overview

### Timeline and Budget

- Project start date: 1/15/2019
   Project end date: 1/15/2021
   (estimated)
- Total project budget: \$840k
  - Total recipient share: \$300k
  - Total federal share: \$540k
  - Total DOE funds spent\*: \$45k

\* As of 3/1/19

### **Barriers**

- Reliability and Costs of Hydrogen Compression (Delivery B)
- Other Fueling Site/Terminal Operations (Delivery I)
- Hydrogen from Renewable Resources (TV G)

### **Partners**

- Governor's Office of Business and Economic Development, Tyson Eckerle
- California Air Resources Board, Andrew Martinez
- California Energy Commission, Jean Baronas
- South Coast Air Quality Management District, Naveen Berry
- Jennifer Kurtz, NREL, PI

### Relevance

Hydrogen and fuel cell stakeholders worldwide are using California's experience as a model case, making success in California paramount to market acceleration and adoption. The technical research capability of the National Renewable Energy Laboratory will be used to assist California in decisions and evaluations, as well as to verify solutions to problems impacting the industry.

Because these challenges cannot be addressed by one agency or one laboratory, a hydrogen research consortium has been organized to combine and collaborate. The collaboration aims to:

- Ensure that data are available to evaluate projects and inform decision makers
- Independently verify and validate component solutions
- Provide experimental results for future hydrogen infrastructure
- Increase the availability of technical experts for quick-need issues for California hydrogen infrastructure development, deployment, operation, and technology advances.

The specific objective for the last year (4/2018 – 3/2019) was to complete the agreement and initiate research

### Approach: Cross-cutting R&D objectives with multiple stakeholders

Regular communication and collaboration between research partners enables flexible, real-time identification of needs and project progress in order to address top priority hydrogen infrastructure gaps.

### Approach: Integrated with H2@Scale Themes

## Approach: Utilize NREL Core Capabilities

R&D tasks leverage existing NREL capabilities and research staff.

### Approach: Project Management

Note, Task 6 is as needed and is not specifically scheduled at this time.

General research reporting includes monthly update partner webinars for research status and final reports.

### Accomplishments & Progress: Data Analysis

Task 1: Data Collection & Analysis	Perform analysis and aggregation of station performance,
12 months, \$40k DOE, \$40k CA	operation, and maintenance data.

- Draft templates for station (e.g., addition of vehicle SOC at fill start) and truck data collection
- Analysis of quarterly reported data
- Initiated discussions regarding top priority station metrics

# Accomplishments & Progress: M/HD Fueling

<b>Task 2: M/H-Duty Fueling</b> 12 months, \$150k DOE, \$50k CA	Perform analysis and reporting of retail and experimental
	fueling data to inform fueling-method decision makers and
	fueling system design.

- Information gathering initiated to identify:
  - Existing station data sources (e.g., Zero-Emission Bay Area Demonstration)
  - Future station data sources (e.g., Zero-Emission and Near-Zero Emission Freight Facilities)
  - M/HD stakeholders
- Evaluate possible second-by-second data collection opportunities
  - Prototype remote data monitoring system
  - Investigate initial use at NREL's Hydrogen
     Infrastructure Testing and Research Facility

Zero-Emission Bay Area Fuel Cell Bus Source: NREL

## Accomplishments & Progress: HCD

Task 2: H. Contaminant Dotactor	Complete near real-time compliance verification to the J2719
24  months (2000  DOE (1000  CA))	requirements of an in-line hydrogen quality detector(s) prior to
24 months, \$500k DOE, \$100k CA	validation at retail hydrogen stations.

- Leverage previously funded HCD work
- Initiated review of possible HCD and selection criteria
- Initiated interface experimental setup and risk review

Prototype image of HCD interface for initial verification of HCD operation Source: NREL

### Accomplishments & Progress: Nozzle

Task 4: Nozzle Freeze-Lock	Create an environmentally controlled experiment to identify
Evaluation	create an environmentally controlled experiment to identify
6 months, \$10k DOE, \$60k CA,	conditions leading to nozzie neeze-lock and for verifying
\$75k Industry	solutions.

### Accomplishments & Progress: H<sub>2</sub> Integration & Tech Assistance

Task 5: CA Hydrogen Integration	Identify the top priorities for data share and experimental scenarios to integrate hydrogen into California's energy
12 months, \$30k DOE, \$20k CA	management strategies.
Task & Tashnisal Assistance	National laboratory technical experts will be available for
12 months, \$10k DOE, \$30k CA	California infrastructure development, deployment, and
	operation.

#### **In Progress**

• No status to report as of 3/4/19, tasks will be initiated beginning of March

### Accomplishments and Progress: Responses to Previous Year Reviewers' Comments

• This project was not reviewed in 2018.

### **Collaboration and Coordination**

The California Air Resources Board (CARB), California Energy Commission (CEC), South Coast Air Quality Management District (SCAQMD) and Governor's Office for Business and Economic Development (GO-Biz) identified a need to leverage national laboratory research capabilities and staff to support their hydrogen efforts. This research consortium identified the research tasks based on research needs and priorities for the California agency partners. Specific focus is placed on sharing and translating lessons learned to other jurisdictions, which is a priority in this partnership between state and federal agencies and laboratories. The partnership includes identifying priorities, providing data, and evaluation of research progress and targets.

### **Remaining Challenges and Barriers**

- Tasks have just started so the majority of the research will take place the remainder of FY19 and into FY20
- Hydrogen contaminant detectors are not expected to meet all of the requirements of SAE J2719
- Publication is an important metric for the research tasks in order to provide data to stakeholders

### Proposed Future Work

<b>Task 1: Data Collection &amp; Analysis</b> 12 months, \$40k DOE, \$40k CA	<ul> <li>Hydrogen station and truck template updates</li> </ul>
	<ul> <li>Identify top priority station metrics for monthly updates</li> </ul>
	<ul> <li>Complete monthly and quarterly station analysis and reporting</li> </ul>
Task 2: M/H-Duty Fueling	• Down-select data sources (stations and fleets) based on availability for
	initial review
Task 3: H <sub>2</sub> Contaminant Detector	<ul> <li>Complete data analysis phase and publish key findings</li> </ul>
	Down-select and order HCD
	Complete verification of HCD operation with pre-mixed gases
24 Months, \$500k DOE, \$100k CA	<ul> <li>Integrate HCD into NREL's HITRF for in-situ operation (1 – 12 months)</li> </ul>
	Review, build, and commission experimental ambient control test
Task 4: Nozzle Freeze-Lock Evaluation	platform
6 months, \$10k DOE, \$60k CA, \$75k	Complete with stakeholder review test plan
Industry	Complete nozzle experiment to benchmark failure frequency and
	condition (ambient temperature and humidity) and publish results
	Collect CA stakeholder needs
Task 5: CA Hydrogen Integration	<ul> <li>Publish review of existing hydrogen integration data and analyses</li> </ul>
12 months, \$30k DOE, \$20k CA	results that address needs
	<ul> <li>Identify gaps and possible future analyses</li> </ul>
	Check in with project partners for brief projects in need of national lab
Task 6: Technical Assistance	technical expertise
12 months, \$10k DOE, \$30k CA	• Generate problem, scope, budget, expert(s), and report if a project is
	agreed upon by the project partners

### Technology Transfer Activities

• None at this time

### Summary

- Expected benefits of this consortium begin with coordinated research efforts that:
  - support the DOE's and CA hydrogen goals and requirements
  - share lessons learned with other states to inform implementation efforts outside of California
  - support shifting the hydrogen infrastructure progress from a government push into a market pull
  - advance the station technology and operation to meet the next waves of vehicle demand
  - leverage existing core capabilities and researchers
  - publish findings from research tasks via relevant conferences, NREL technical reports, and journals
- Research tasks progress are in initial stage
