

LIGHT-DUTY HYDROGEN AND FCEV EFFORTS

2019 DOE FCTO Annual Merit Review

Andrew Martinez, PhD

Hydrogen Program Expert

andrew.martinez@arb.ca.gov

Motivations

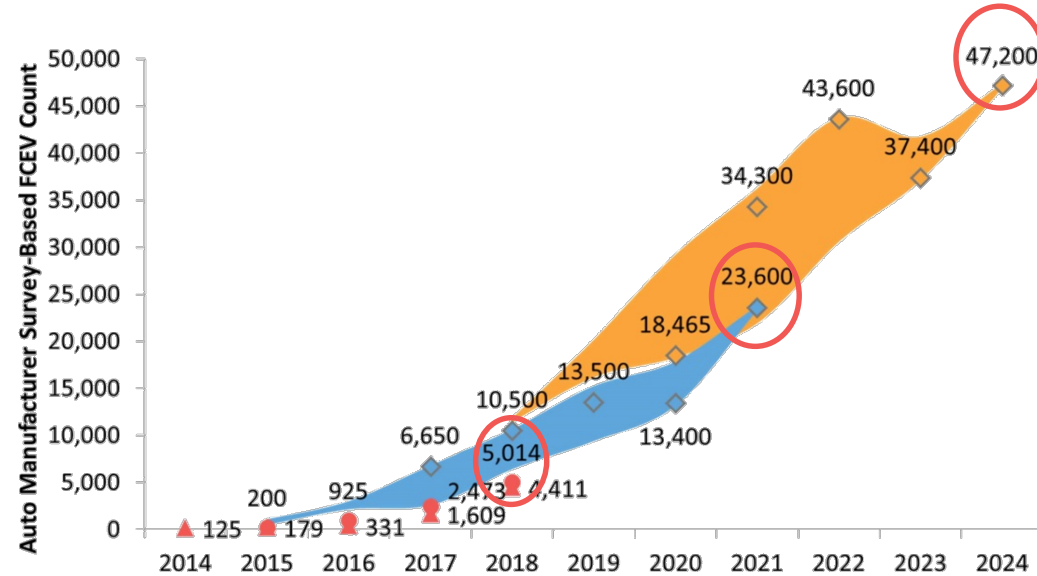

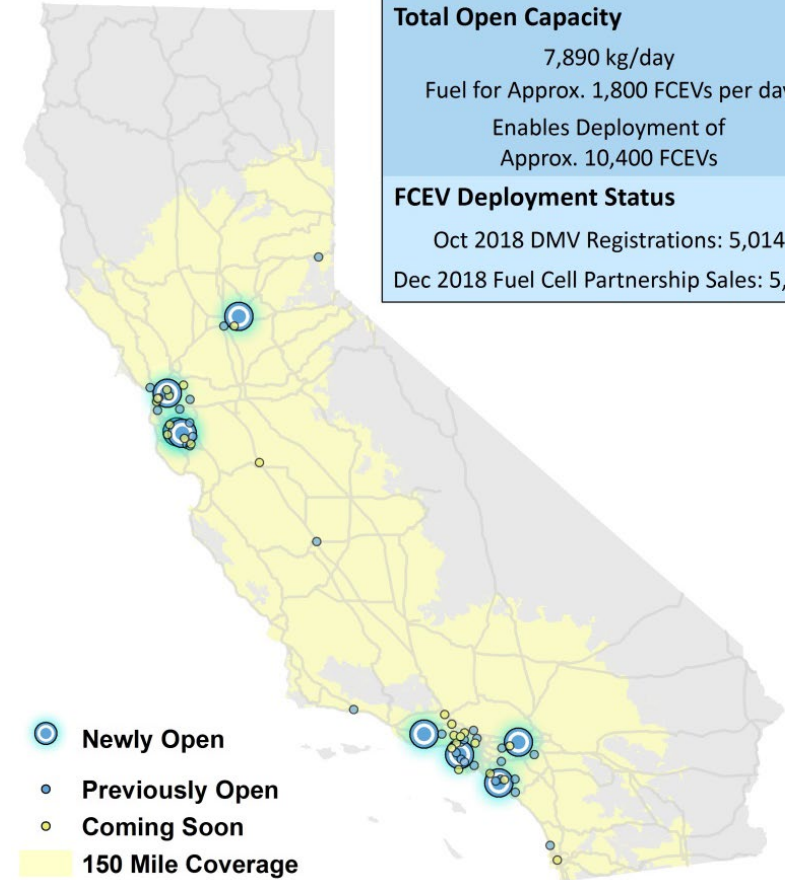

- Zero Emission Vehicles vital to addressing air quality & climate change
- Goal to enable industry to scale up a sustainable market
- MD/HDV and LDV Synergies
 - LDV: FC system economy of scale
 - MD/HDV: H2 fuel economy of scale

California's Light-Duty FCEV Progress

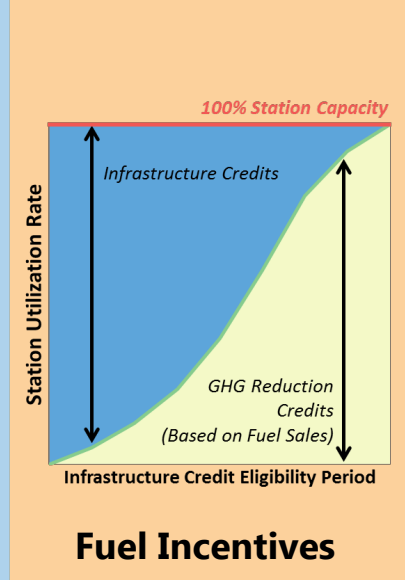

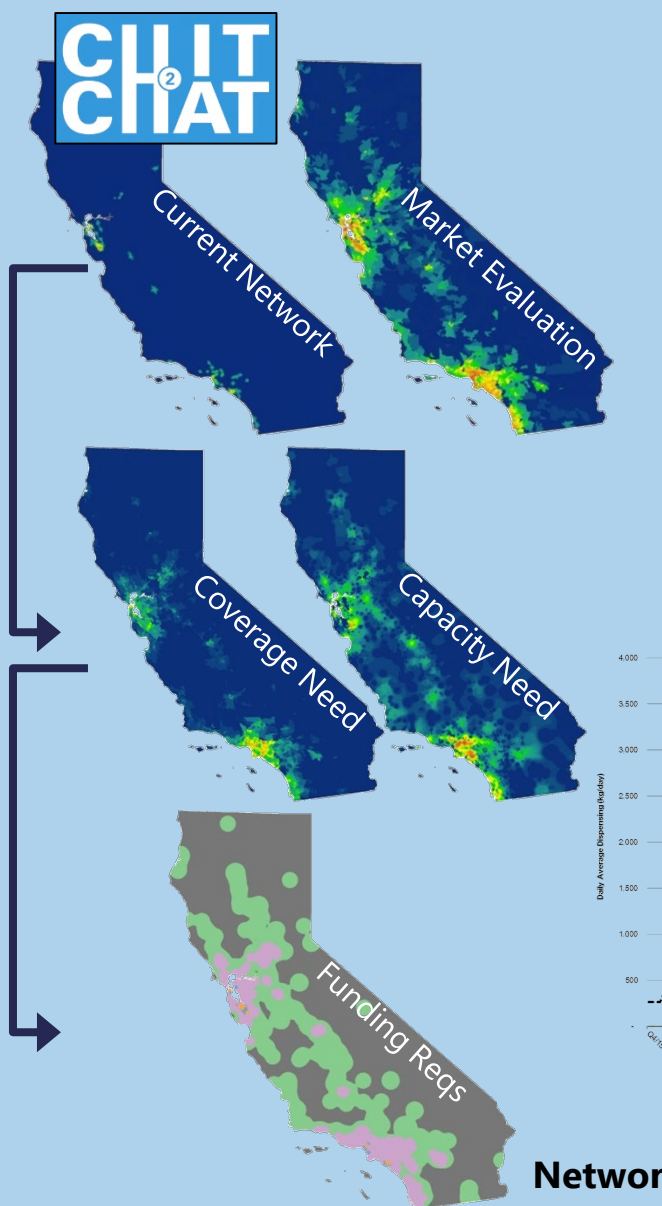

2018 Year in Review

Network Summary	
Number of Stations	39 Open + 25 Coming Soon
Total Open Capacity	7,890 kg/day Fuel for Approx. 1,800 FCEVs per day Enables Deployment of Approx. 10,400 FCEVs
FCEV Deployment Status	Oct 2018 DMV Registrations: 5,014 Dec 2018 Fuel Cell Partnership Sales: 5,658

■ Range of Mandatory Period Data ■ Range of Optional Period Data
◆ Reported Mandatory Period Estimates ◆ Reported Optional Period Estimates
▲ April Registrations ● October Registrations

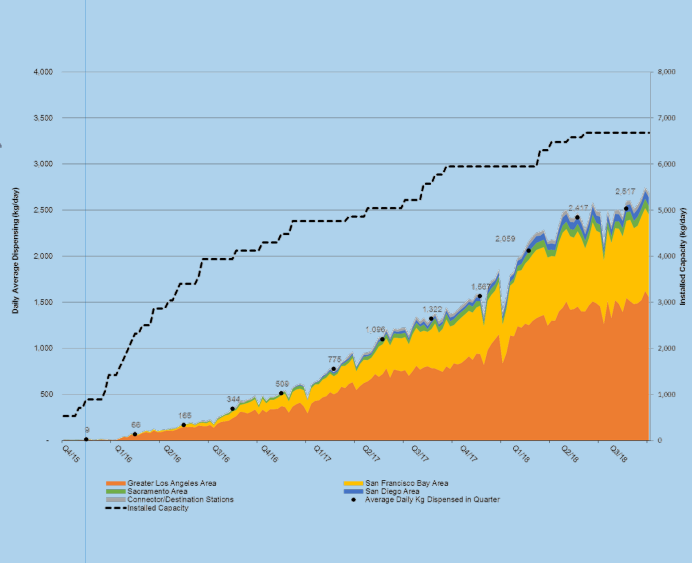

Hydrogen Program Portfolio

Fuel Incentives

Economic Evaluations

Network Funding, Analysis, and Reporting

Station Evaluation

- Evaluate dispensing according to SAE J2601 and ANSI/CSA HGV 4.3
- CARB lead on implementation
 - Testing, Analysis, Review
- Shaping future SAE standards
- Inform future standardization & verification of industry-led testing
- Partners: DOE, NREL, SNL, Powertech, DMS, CaFCP, Energy Commission, SCAQMD

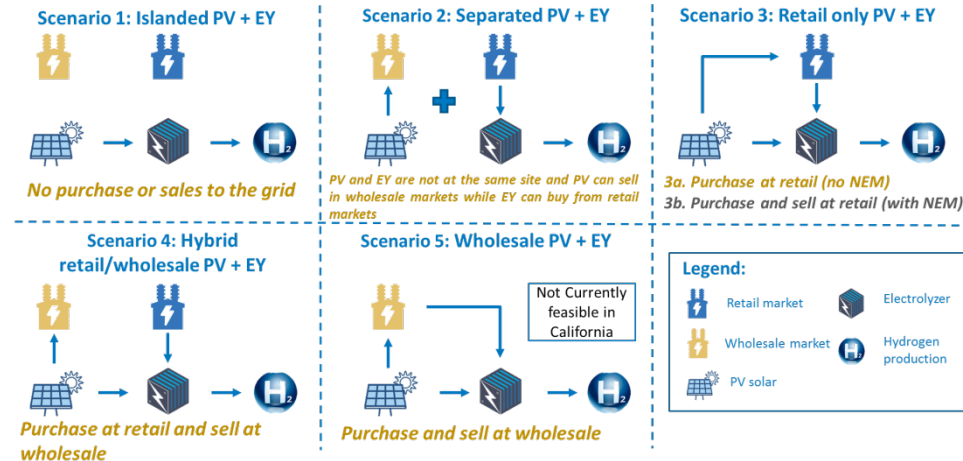

- First-of-its-kind tool to provide a “standard ruler” to evaluate station capacity based on limited set of equipment specifications
- Used in Low Carbon Fuel Standard infrastructure credit evaluations and future Energy Commission grant program
- Developed in partnership with NREL, Energy Commission, and CARB with public and industry review

The screenshot displays the HySCapE 1.0 web interface. At the top, the OpenEI logo and 'HySCapE' text are visible. Below this is a header for 'HySCapE 1.0' and a main heading 'Hydrogen Station Capacity Evaluation'. A sub-heading states: 'HySCapE outputs hydrogen fueling station capacity using station equipment parameters and a demand profile.' A prominent yellow 'Run Model' button is located below the text. The main content area is titled 'Run the Model' and is divided into two panels: 'Input File' and 'Additional Options'. The 'Input File' panel includes a note about template format, a file selection area showing 'No file chosen' and a 'Choose a file...' button, and a 'Templates' section with buttons for 'Large Gas', 'Small Gas', 'Liquid', and 'Production'. The 'Additional Options' panel contains two settings: 'Storage Level Trigger for Delivery or Production' set to 30% and 'Time Between Fills (seconds)' set to 255. At the bottom of the interface are 'Start' and 'Reset' buttons.

H₂@Scale CRADA

Optimizing an Integrated Solar-Electrolysis System

- Exploring system design and operation implications on the business case for solar-sourced hydrogen in California
- Partners: PG&E, DOE, NREL, CARB, GO-Biz

California Hydrogen Research Consortium

- Addressing several early-market infrastructure development and analysis needs
- Partners: NREL, DOE, CARB, Energy Commission, GO-Biz, SCAQMD
- Poster H2041 (April 30, 6:30PM)

Task	Description
Data Collection & Analysis	Perform analysis and aggregation of station performance, operation, and maintenance data.
Medium/Heavy-Duty Fueling	Perform analysis and reporting of retail and experimental fueling data to inform fueling-method decision makers and fueling system design.
H ₂ Contaminant Detector	Complete verification of in-line hydrogen quality detectors prior to validation at retail hydrogen stations.
Nozzle Freeze-Lock Evaluation	Create an environmentally controlled test setup for identifying conditions leading to nozzle freeze-lock and for verifying solutions. This task will be implemented upon industry budget and DOE approval to begin work.
CA Hydrogen Integration	Identify the top priorities for data share and experimental scenarios to integrate hydrogen into California's energy management strategies.
Technical Assistance	National laboratory technical experts will be available for California infrastructure development, deployment, and operation.
