Fuel Cell Technologies Office Overview

Hydrogen and Fuel Cell Technical Advisory Committee
Washington, DC
04/01/2014

Dr. Sunita Satyapal
U.S. Department of Energy
Fuel Cell Technologies Office
Program Director
Agenda

- EERE Organizational Updates
- Program Overview
  - Targets & Current Status
  - Key Accomplishments & Analysis
- HTAC Recommendations
  - Program Responses and Next Steps
National Energy Goals & Climate Action Plan
Reduce net oil imports by 50% by 2020, compared to 2008
Reduce GHG emissions >80% below 2005 levels by 2050
Reuben Sarkar
Deputy Assistant Secretary - Transportation

- Senior Director Business Development at Proterra, Inc. (a leading start-up manufacturer of electric buses and fast charging stations)
- Multiple fuel cell bus programs
- Lead Design Release Engineer at GM on the electric drive unit for the Chevy Volt
- BS, MS in Chemical Engineering, MBA
Mission: Enable widespread commercialization of a portfolio of hydrogen and fuel cell technologies through applied research, technology development and demonstration, and diverse efforts to overcome institutional and market challenges.

Key Goals: Develop hydrogen and fuel cell technologies for early markets (stationary power, lift trucks, portable power), mid-term markets (CHP, APUs, fleets and buses), and long-term markets (light duty vehicles).

Key Targets for Automotive Applications
- $40/kW by 2020 (ultimate target: $30/kW)
- 5000 hour durability (150,000 miles)
- 60% efficiency
- > 300 mile driving range
# Key Partnerships, Overview & Activities

## R&D
- **Precompetitive R&D**
  - USCAR, energy companies, EPRI, utilities

## Demonstration & Deployment
- **Auto OEMs, energy companies, government, fuel cell companies**

## Other State Partnerships
- **South Carolina (SCHFCA)**
- **CT, MA (e.g., CCAT, H2-Fuel Cell Coalition)**
- **Hawaii (Hawaii Hydrogen Initiative, H2I)**

## National lab led activities with industry
- **e.g., SNL & NREL**

## Key Goals
- $40/kW by 2020*
- <$4/gge H₂ by 2020*

*modeled, projected at high volume cost

## Strategic Feedback & Guidance
- HTAC – Federal Advisory Committee: Review and make recommendations on the implementation of programs and activities, safety, economical, and environmental consequences of hydrogen and fuel cell technologies, and plans.
- National Academics, Quadrennial Review, GAO, IG, etc.

## Enabling Commercialization
- **Government partnership**
  - Coordination on policy, lessons learned, accelerating commercialization
  - 17 countries & the European Commission

## H₂ USA
- **Public-private partnership**
  - ~30 partners including global OEMs, H₂ providers, etc.

## Key Partnerships, Overview & Activities

- **U.S. DRIVE**
  - Precompetitive R&D
  - 25 countries
  - Advanced Fuel Cells Implementing Agreement
  - Hydrogen Implementing Agreement

- **Government partnership**
  - 17 countries & the European Commission

- **U.S. DRIVE**
  - Precompetitive R&D
  - 25 countries
  - Advanced Fuel Cells Implementing Agreement
  - Hydrogen Implementing Agreement

- **Government partnership**
  - 17 countries & the European Commission

- **U.S. DRIVE**
  - Precompetitive R&D
  - 25 countries
  - Advanced Fuel Cells Implementing Agreement
  - Hydrogen Implementing Agreement

- **Government partnership**
  - 17 countries & the European Commission

- **U.S. DRIVE**
  - Precompetitive R&D
  - 25 countries
  - Advanced Fuel Cells Implementing Agreement
  - Hydrogen Implementing Agreement

- **Government partnership**
  - 17 countries & the European Commission
## Summary of Targets & Status

Communication & Outreach

Published more than 80 news articles in 2013 (including blogs, progress alerts, DOE news alerts)

• **Monthly Webinar Series**
  - Register at - http://www1.eere.energy.gov/hydrogenandfuelcells/webinars.html

• **Announcements**
  - Fuel Cells kick off Google+ Energy 101 series
  - Secretary of Energy attends DC Auto Show
  - Launched NFCTEC (secure data center)
  - Launched Hydrogen Safety Tools App for iPhone and iPad
  - Launched Alternative Fueling Station Locator App

• **Training and Workforce Development**
  - Trained more than 10,000 teachers and more than 26,000 code officials and first responders in person and online

• **Monthly Newsletter**
  - Visit the web site to register or to see archives - (http://www1.eere.energy.gov/hydrogenandfuelcells/newsletter.html)

• **Caucus on H₂ and Fuel Cells (Senate & House)**

• **Clean Energy Technology Showcase for investors (NYC and CA)**
Examples of External Public Support

"Fuel cells are an important part of our energy portfolio...deployments in early markets are helping to drive innovations in fuel cell technologies across multiple applications."

- Dr. David Danielson Assistant Secretary for Energy Efficiency and Renewable Energy, 2012

“Reduced oil dependence is an important part of President Obama’s energy security and climate plans, and hydrogen and fuel cell technologies will help ensure America’s continued leadership in clean energy innovation.”

- Dr. Ernest Moniz Secretary of Energy

**Strong Participation in Stakeholder Outreach in 2012-2013- Examples:**

- **Senate H₂ and Fuel Cells Caucus**
  - Blumenthal (D-CT)
  - Coons (D-DE)
  - Graham (R-SC)
  - Hoeven (R-ND)

- **House H₂ and Fuel Cells Caucus**
  - Dent (R-PA)
  - Doyle (D-PA)
  - Larson (D-CT)
  - Wilson (R-SC)

- **Fuel Cell Summit, Washington DC 2012**

Secretary Moniz visits the Washington Auto Show, looking at the latest fuel cell vehicles from Hyundai, Honda, and Toyota.
## New Awards

### Demonstration and Deployment of Fuel Cell Hybrid Electric Medium-Duty Trucks

**GREEN SOLUTION TO DRIVING RANGE**

*FedEx Express (Memphis, TN)*

**OBJECTIVE:**
Develop fuel cell hybrid electric walk-in delivery vans, to extend battery-electric vehicle range from 56 to up to 150 miles. Validate through real-world operation.

**IMPACT:**
FedEx Express uses approximately 40,000 vehicles in its fleet, which could potentially be replaced with fuel cell hybrid vehicles. The 20 deployed vans could save 97,880 gallons diesel per year and 248 metric tons of CO₂ emissions per year.

**PARTNERS:**
- Smith Electric Vehicles (Kansas City, MO)—*Truck OEM and Electrical Integrator*
- Plug Power (Latham, NY)—*Fuel Cell System OEM*

**TOTAL FUNDING PLANNED:** $6M
- DOE: ~$3M
- Non-Federal: ~$3M

### “FUEL CELL HYBRID ELECTRIC WALK-IN VAN DEPLOYMENT”

*Center for Transportation and the Environment (Atlanta, GA)*

**OBJECTIVE:**
Develop fuel cell hybrid electric walk-in delivery vans, to extend battery-electric vehicle range from 90 to 150 miles (75 to 125 miles usable). Validate through real-world operation.

**IMPACT:**
Fuel cell hybrid vehicles could potentially take place of ~46,000 diesel walk-in vans in UPS’ fleet alone. The 17 deployed vans could save 44,200 gallons of diesel per year and 445 metric tons of CO₂ emissions per year.

**PARTNERS:**
- University of Texas – Center for Electromechanics (Austin, TX)—*Research Center*
- Electric Vehicles International (EVI) (Stockton, CA)—*Manufacturer of Alternative Energy Vehicles*
- Hydrogenics USA (San Diego and Torrance, CA)—*Hydrogen Supplier*
- Valence Technology (Austin, TX)—*Battery Manufacturer*
- United Parcel Service (Atlanta, GA)—*Logistics (will supply vans)*

**TOTAL FUNDING PLANNED:** $10.1M
- DOE: ~$3M
- Non-Federal: ~$7.1M
**Recommendations**

- Emphatic public support for FCEV deployment to inspire confidence and increase public awareness.
- Stronger commitment to R&D to ensure U.S. technology leadership.
- Collaboration with infrastructure initiatives in Germany, Japan, Korea, and the UK on technical and regulatory issues to reduce cost and accelerate deployment.
- Direct investment in hydrogen infrastructure as part of an integrated strategy or comprehensive National Energy Policy to accelerate deployment and attract private investment.

**Key Responses**

- Secretary announced $7M in new fuel cell awards and attended the DC auto show. DOE published *Pathways to Commercial Success*, and recently launched, starting with Fuel Cells, an Energy 101 Google+ Hangout series.
- Hydrogen and fuel cell R&D is part of the President’s all-of-the-above energy strategy. Focused on key areas. FY14 budget request ($100M) for FCTO was 25% higher than FY13. Stable funding: FY15 request = FY14 approps.
- DOE serves as Vice Chair of the IPHE, along with Germany, (chaired by Japan). Hosted webinar on international workshop on hydrogen infrastructure. Joint workshops & AMR session planned with H2USA & global analogs.
- Committed to H₂USA, public-private partnership. Launched four working groups in key areas. Strong relationships with state organizations and activities (i.e., CEC, CARB, CAFCP).
Fuel Cell Technologies – Funding History ($, thousands) - Shift towards consistent, stable funding

Appropriation – Before sequestration, rescission, and SBIR/STTR deduction

~$92.8M request consistent with appropriations
Fiscal Year 2015 Priorities:

**Fuel Cell R&D ($33M):** Develop and demonstrate innovative technologies to reduce cost and improve durability – e.g., by increasing PEM fuel cell power output per gram of platinum-group metal catalyst to 6.5kW/g in 2015 and 8.0kW/g by 2020 (from 2.8kW/g in 2008).

**Hydrogen Fuel R&D ($36.3M):** Advance pioneering technologies in materials, components, and processes that will reduce the cost of hydrogen from renewable resources to $6.80/gge (dispensed and untaxed) from $8.00/gge in 2011; and the cost of hydrogen storage systems by 15% compared to the 2013 baseline of $17/kWh.

**Manufacturing R&D ($3M):** Demonstrate a ground-breaking 3X increase of continuous in-line measurement processes to achieve 100 ft./min for MEA and MEA component roll-to-roll processing.

**Technology Validation (S6M):** Demonstrate an electrolyzer capable of producing hydrogen for a refueling station with an output pressure of greater than 50 bar, a hydrogen storage and refueling system for a roof-top backup power system capable of providing power for telecommunications equipment, the potential for doubling hydrogen capacity at refueling stations, and integrating water electrolyzers and/or fuel cells with the grid.
Assessing the Impact of DOE Funding

DOE funding has led to 40 commercial hydrogen and fuel cell technologies and 65 emerging technologies.

Accelerating Commercialization

EERE-funded Fuel Cell Technologies that are Commercially Available

Cumulative Number of Commercial Technologies

- Fuel Cells
- H2 Production/Delivery
- Storage

2007 - 2013

Source: Pacific Northwest National Laboratory

Leveraging DOE Funds:
Government as "catalyst" for market success of emerging technologies.

- DOE cost-shared deployments led to >5X additional purchases and orders.

More than 450 PATENTS resulting from EERE-funded R&D:
- Includes technologies for hydrogen production and delivery, hydrogen storage, and fuel cells

Cumulative Number of Patents

**Patent Analysis**

FCTO has helped fund 442 patents with national labs accounting for 179 or ~40% of patents. 60 patents (over 10%) are seeking or negotiating licenses and 46 patents (~10%) are licensed.

## 2014 Solicitations

### Topics

#### Hydrogen Production Research & Development (up to $4M*)
- Integrated or hybrid systems for central, semi-central, or distributed production of low-cost, low carbon hydrogen from natural gas
- Thermochemical conversion of bio-derived liquids for distributed or semi-central production of low-cost hydrogen
- Hydrogen production through direct solar watersplitting technologies: Advanced materials-based systems for direct solar water splitting for central or semi-central production of low-cost renewable hydrogen

#### Hydrogen Delivery Technologies (up to $4M*)
- Forecourt compressors for 700 bar gaseous hydrogen dispensing
- Integrated Intelligent Hydrogen Dispensers for 700 bar Gaseous Refueling of Fuel Cell Electric Vehicles

#### Research & Development of Hydrogen Storage (up to $4M*)
- Reducing the cost of compressed hydrogen storage systems
- Improved materials for fiber composites and balance of plant components
- New hydrogen storage materials discovery
- Forecourt hydrogen storage at 875 bar of greater

#### Fuel Cell Hybrid Electric Medium Duty Trucks, Roof-top Backup Power, and and Advanced Hydrogen Refueling Components (~$7M)
- Demonstration and deployment of fuel cell hybrid-electric medium-duty trucks
- Validation of advanced hydrogen refueling components
- Demonstration and case study for roof-top installations of hydrogen fuel cell back-up power systems
- Hydrogen meter R&D

*May include alternates and subject to appropriations.
The EERE Incubator Program is intended to identify potentially impactful technologies that are not already addressed in EERE Technology Offices’ strategic plans or project portfolios. The FOA will be ‘open’ to any and all impactful ideas; however, some anticipated specific areas of interest include:

- Platinum Group Metal (PGM)-free catalysts and membrane electrode assemblies
- Fuel cell–based electrochemical conversion devices for stationary energy storage
- Completely innovative hydrogen production and delivery technologies (including hoses, meters, compressors, etc.)
- Breakthrough, low pressure hydrogen storage materials
- Hydrogen infrastructure: Manufacturing solutions for low-cost, standardized skid-mounted hydrogen fueling stations; and game-changing business models/financial approaches to address infrastructure costs.

**FOA Planned Release:**
April 2014
Validated over 800 backup power units with seven industry partners
- FedEx Freight East, GENCO, Nuvera Fuel Cells, Plug Power, ReliOn Inc., Sprint Communications, Sysco of Houston –

• 842 units in operation
• 1.94 MW installed capacity, average site capacity of 4-6 kW
• 99.7% successful starts (2,579 start attempts)
• 65 continuous hours demonstrated
• >1,600 operation hours

Validated over 450 material handling equipment units with seven industry partners

• 490 units in operation
• >1,800,000 operation hours, 4.4 average operation hours between fills
• ~230,000 kg of hydrogen dispensed during more than 290,000 hydrogen fills with an average of 0.6 kg per fill

1Not all systems have detailed data reporting to NREL. 2One project has completed.
Launched National Fuel Cell Technology Evaluation Center (NFCTEC)

The Secretary of Energy, Ernest Moniz, announced the unveiling of a one-of-its-kind national secure data center dedicated to the independent analysis of advanced hydrogen and fuel cell technologies at the Energy Department's Energy Systems Integration Facility (ESIF) at NREL in Golden, Colorado.

NFCTEC plays a crucial role in NREL's independent, third-party analysis of hydrogen fuel cell technologies in real-world operation.

- Designed for secure management, storage, and processing of proprietary data from industry.
- Technology Validation Team analyzes detailed data and reports on fuel cell technology status, progress, and technical challenges.
- Detailed data products provided to partners, composite data products available online

Partner
Partner with NFCTEC to take advantage of state-of-the-art facilities.

Applied Energy Materials Genome - RFI & Workshop planned

Goal: Develop approach to accelerate progress across EERE portfolio. Concepts will expand on the Materials Genome Initiative (MGI) approach, combining multi-scale, multi-physics computational methods with high-throughput synthesis and characterization for intelligent, focused development of improved MATERIALS, PROCESSES & PRODUCTS across the EERE technology portfolio.

Leveraging cross-cutting synergies to accelerate research & development

AEMGI: leverages & builds upon MGI platform, adding IP

Application-driven in support of EERE technology portfolio

- Product Development & IP Tools
- Data Management & Informatics Tools
- Computational Tools (multi-scale, multi-physics)
- Experimental Tools (fabrication, characterization)

growth through cross-cutting linkages and synergies in the supported energy technologies

Broadly supporting the materials R&D community

MGI: platform of computation, experimental & data tools
## Recommendations

- Emphatic public support for FCEV deployment to inspire confidence and increase public awareness.

- Stronger commitment to R&D to ensure U.S. technology leadership.

- Collaboration with infrastructure initiatives in Germany, Japan, Korea, and the UK on technical and regulatory issues to reduce cost and accelerate deployment.

- Direct investment in hydrogen infrastructure as part of a integrated strategy or comprehensive National Energy Policy to accelerate deployment and attract private investment.

## Key Responses

- Secretary announced $7M in new fuel cell awards and attended the DC auto show. DOE published *Pathways to Commercial Success*, and recently launched, starting with Fuel Cells, an Energy 101 Google+ Hangout series.

- Hydrogen and fuel cell R&D is part of the President’s all-of-the-above energy strategy. Focused on key areas. FY14 budget request ($100M) for FCTO was 25% higher than FY13. Stable funding: FY15 request = FY14 approps.

- DOE serves as Vice Chair of the IPHE, along with Germany, (chaired by Japan). Hosted webinar on international workshop on hydrogen infrastructure. Joint workshops & AMR session planned with H2USA & global analogs.

- Committed to H₂USA, public-private partnership. Launched four working groups in key areas. Strong relationships with state organizations and activities (i.e., CEC, CARB, CAFCP).
RCSWG provides a forum to exchange information, attain consensus, and develop recommendations to IPHE member countries to facilitate harmonization of key RCS.

**Activities:**
- Harmonized test measurement protocol for hydraulic and pneumatic testing of Type IV tanks. Hydraulic testing is complete.
- Fuel quality stack testing round robin to develop a harmonized testing protocol
- International “Safety Portal” on Lessons Learned (e.g.-H2incidents.org or HIAD databases) in deployment of hydrogen technologies

**5th International Conference on Hydrogen Safety**
**September 9-11, 2013 Brussels, Belgium**

Purpose is to improve public awareness and trust in hydrogen technologies by communicating a better understanding of both hazards and risks associated with hydrogen
- Approximately 200 participants, 28 countries
- Topics included H2 Release and dispersion, Risk Management, Safety H2 infrastructure, Education, and RCS

**1st Bilateral Webinar between U.S. and European Commission (~210 participants)**

*What Can We Learn from Hydrogen Safety Event Databases?*
Hydrogen Safety, Codes and Standards

**Codes and Standards** - Conduct critical R&D needed for the development of technically sound codes and standards and facilitate harmonization of domestic and international regulations, codes, and standards.

<table>
<thead>
<tr>
<th>Identify R&amp;D needs</th>
<th>Perform High-Priority R&amp;D</th>
<th>Impact Codes and Standards</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Lead stakeholder workshops, develop R&amp;D roadmaps&lt;br&gt;• Analyze existing codes and standards safety knowledge&lt;br&gt;• Participate in technical working groups&lt;br&gt;</td>
<td>• Foundational hydrogen behavior&lt;br&gt;• Quantitative Risk Assessments&lt;br&gt;• Compatible materials and components&lt;br&gt;• Test protocols&lt;br&gt;• Fuel Quality&lt;br&gt;• Sensors</td>
<td>• Participate in and lead technical committees to develop requirements&lt;br&gt;• Harmonize critical regulations, codes, and standards domestically and internationally (i.e. SAE 2719 and ISO 14687-2)&lt;br&gt;• Publish R&amp;D results</td>
</tr>
</tbody>
</table>

Critical areas for FY14 for Acceleration of hydrogen infrastructure:
1. NFPA 2 Chapter 5 Validation for Performance Based Approach
2. Initiating LH2 Release Behavior to decrease separation distances in conjunction with NFPA 55
3. Development of Quantitative Risk Assessment Toolkit (HyRAM)
4. Development of a National Permitting Template in conjunction with H2USA and FCHEA

**Station Footprint (Cost) Reduction** - Critical Separation Distances were reduced by ~50% for GH2 due to supported SCS R&D efforts and direct participation in code development of NFPA 2 Hydrogen Technologies Code.

**Safety** - Develop and implement safety practices and procedures to ensure the safe operation, handling, and use of hydrogen and fuel cell technology.

Trained > 26,000 first-responders and code officials on hydrogen safety and permitting through on-line and in-classroom courses

Hydrogen Tools APP for iPad/iPhone (383 downloads as of 10/2013)
International Hydrogen Infrastructure Workshop

The workshop, held in Berlin in June 2013, was organized by NOW, DOE and NEDO and included ~60 participants from Germany, the EU, Scandinavia, Japan and the United States.

Objective: To enable international information exchange on hydrogen infrastructure challenges in four key areas: Refueling, Hydrogen Quality, Metering, and Hardware Reliability & Reliability.

Key outcomes:

- **Refueling:** Identified the need for a test apparatus in each region to validate station fueling performance. There is an opportunity to share information on the design of the test apparatus and validation results.

- **H2 Quality:** The value of sharing information on hydrogen quality test methods was identified. Some regions are testing yearly at great expense and others are not testing at all. A minimum test requirement for fuel quality is needed.

- **Metering:** The requirements for hydrogen metering accuracy vary by region. Data presented showed great variation in the accuracy of the meters. Sharing information on meter development may help speed R&D and identify the most accurate meters available internationally.

- **Station Hardware:** Key reliability concerns varied by region, however 700 bar dispenser hoses were consistently identified with on going development efforts in the Japan, the EU, and the US.

A follow on workshop will be held May 8th & 9th, 2014 in Los Angeles, CA
The workshop was held February 25th and 26th, 2014 at The National Renewable Energy Laboratory.

- The workshop brought together approximately 30 experts from industry and public sector to discuss the challenges to reducing the cost of hydrogen transmission and distribution from the point of production to the point of consumption at forecourt stations, and identify RD&D areas to address those challenges identified.

- The workshop sessions were organized into four topic areas: pipelines (compression and storage) and over-the-road (gaseous, liquid and hybrid approaches), top issues and activities from each session have been captured with a full report to follow before AMR.

1.) Pipeline Compression
   - Compressor maintenance/reliability
   - High efficiency, low capital cost compressors
   - Optimal hydrogen pressure management

2.) Pipeline Materials
   - \( \text{H}_2 \) fatigue properties w/ microstructure
   - Develop lower cost joining technologies (welding and FRP)
   - Codes and Standards Issues

3.) Gaseous Delivery
   - Lack of understanding of degradation mechanisms
   - High cost of materials
   - Need for advanced tube trailer design
   - Improved efficiency for standards and regulations development

4.) Liquid delivery
   - CAPEX reduction for smaller plants/Smaller scale, low cost modular liquefiers
   - Light-weight materials to increase payload
   - Reducing bleed off during filling, transport, off loading/Boil off recovery
   - Liquid Carriers R&D: Simple Chemistry
   - Liquefaction Efficiency/Refrigeration efficiency
Forecourt CSD Workshop

The workshop was held March 20th and 21st, 2013 at Argonne National Laboratory just outside of Chicago, IL

- The workshop brought together approximately 30 experts from Industry and public sector to discuss the challenges to reducing the cost of hydrogen infrastructure at the forecourt and identify RD&D areas to address those challenges identified.
- The workshop sessions were organized into three topic areas, Compression, Storage, and Other and the top issues and activities from each session have been captured with a full report to follow during the AMR.

1.) Materials Research
   - Dynamic seals
   - Carbon fiber (cost and batch quality)
   - Hydrogen compatible metals

2.) Station Optimization Analysis
   - Near, Mid and Long term markets
   - Storage vs. Compression trade offs

3.) Metering, Quality & Performance Testing for Dispensing
   - Meter accuracy
   - Hydrogen quality measurement device
   - Station dispensing test apparatus

4.) Data for codes and standards development
   - Setback distances
   - Tank cycle life
### Recommendations

1. Emphatic public support for FCEV deployment to inspire confidence and increase public awareness.

2. Stronger commitment to R&D to ensure U.S. technology leadership.

3. Collaboration with infrastructure initiatives in Germany, Japan, Korea, and the UK on technical and regulatory issues to reduce cost and accelerate deployment.

4. Direct investment in hydrogen infrastructure as part of an integrated strategy or comprehensive National Energy Policy to accelerate deployment and attract private investment.

### Key Responses

1. Secretary announced $7M in new fuel cell awards and attended the DC auto show. DOE published *Pathways to Commercial Success*, and recently launched, starting with Fuel Cells, an Energy 101 Google+ Hangout series.

2. Hydrogen and fuel cell R&D is part of the President’s all-of-the-above energy strategy. Focused on key areas. FY14 budget request ($100M) for FCTO was 25% higher than FY13. Stable funding: FY15 request = FY14 approps.

3. DOE serves as Vice Chair of the IPHE, along with Germany, (chaired by Japan). Hosted webinar on international workshop on hydrogen infrastructure. Joint workshops & AMR session planned with H2USA & global analogs.

4. Committed to H₂USA, public-private partnership. Launched four working groups in key areas. Strong relationships with state organizations and activities (i.e., CEC, CARB, CAFCP).
Mission: To promote the commercial introduction and widespread adoption of FCEVs across America through creation of a public-private partnership to overcome the hurdle of establishing hydrogen infrastructure.

Current partners include (additional in process):
H2 Refuel Competition Summary

The Goal:
Make a system that does on-site generation of hydrogen, using electricity or natural gas, to fuel hydrogen vehicles, that can be used in homes, community centers, retail sites or similar locations. The best entry, based on technical and cost criteria, will win $1 million!

The Challenge:

- **Month 1-12**: When the competition opens, teams will have one year to find partners, design a system, test components, find a place to install the system, and register for the prize.

- **Month 12-14**: After one year, the teams will submit data and designs, and the top five will be selected by a team of independent judges to go to the testing phase.

- **Month 14-21**: Finalist teams will have seven months to build, install, and prepare their systems for testing.

- **Month 22-24**: Remote and on-site testing will be used to collect data for the technical criteria, and independent financial experts will evaluate the cost criteria. An open house will let the public get a peek at the entries!

- **Month 27**: Once the data is analyzed, the H-Prize winner will be announced.
H-Prize Scoring Criteria - open for public comment (March 2014)

- Each criteria has a scoring criteria table
  - Criteria topics the same for all entries, but some score targets are different for home and community/fleet scale
- Because some of the criteria are considered more critical, the criteria have different weights

### Criteria Weight

</tr>
</tbody>
</table>

PGM catalyst loadings expected to be ~5 g/vehicle (LDV, gasoline) by 2025.

Will drive lower PGM targets for fuel cells

EPA: Future ICEV mix may be dominated by turbocharged vehicles with smaller engines, in part a result of fuel economy rules decreasing catalyst requirements. However, Tier 3 emissions standards will have the effect of increasing catalyst loadings.
Levelized Cost of Electricity

LCOE in 2012 Cents/kWh (Technology in 2020, No Incentive Assumed)

Note: Medium-FC is 200 kWe and Micro-FC is 7.0 kWe

(a) Discounted cash flow model using technoeconomic inputs to project H2 production costs incorporating economies of scale;
(b) Current case based on demonstrated technology manufactured at volume; different from existing costs based on low production commercially available electrolyzers
**Recommendations**

Determine if national policies are being considered that would significantly increase renewable penetration

Conduct sensitivity analyses to estimate the value of hydrogen energy storage projects; determine scale and economics required to make hydrogen storage competitive; investigate potential for “power-to-gas” energy storage systems

**Responses**

Renewables feature strongly in the President’s Climate Action Plan. Since 2008 the U.S. has doubled electricity generation from renewables with a goal to double that number again by 2020

DOE is planning a 2014 workshop on Hydrogen Energy Storage for Variable Electricity Generation

Investigating the potential of hydrogen energy systems as a grid management tool and to provide H₂ as transportation fuel.

Invested $135M for a state-of-the-art Energy Systems Integration Facility at NREL where further analysis and demonstration may be done
Examples of Analyses

Costs increase rapidly with above ground storage ($700/kg vs. $7/kg)
Additional Storage capacity is extremely low cost and the main strength

Underground hydrogen storage is competitive with most battery options at medium and long term

Input Values:
10MW FC, 40 MWhr storage, 10% free electricity, 33.3% capacity factor electrolyzer (8 hr/d), FC operating 4 hr/d
What: Hydrogen Energy Storage Workshop (Grid and Transportation)
Who: U.S. Department of Energy and Industry Canada
Where/When: Sacramento, California, May 14-15, 2014
Why: Identify benefits and opportunities for commercial hydrogen energy storage applications which support:

1. Grid Services
2. Variable Electricity Generation
3. Hydrogen vehicles

Key topics: (1) Business models and early applications, (2) Specific policy barriers and incentives, (3) Modeling and econometric approaches, and (4) Potential opportunities for effective demonstrations
Recent and Upcoming Workshops

- Hydrogen Transmission and Distribution Workshop (February 25-26th, 2014)
- Electrolytic Hydrogen Production (February 27-28th, 2014)
- Infrastructure Financing Workshop (April 2014)
- Hydrogen Safety Resource Tools (April 2014)
- 2nd International Workshop on Hydrogen Infrastructure (May 8-9th, 2014)
- Energy Storage Workshop (May 2014)
- Contaminant Detection at the Forecourt (June 12th, 2014)
- Applied Energy Materials Genome (TBD)

2013 Workshops

- Hydrogen Compression, Storage, and Dispensing Cost Reduction Workshop (March 2013)

- Biological Hydrogen Production Workshop (September 2013)
  - https://www1.eere.energy.gov/hydrogenandfuelcells/wkshp_bio_h2_production.html

- EERE Quality Control Workshop (December 2013)
  - https://www1.eere.energy.gov/hydrogenandfuelcells/wkshp_eere_quality_control.html
Examples of Key Activities: HTAC and Program Impact

- Annual Report
- Prior input on Program Requests
  - H₂ threshold cost revision
  - H₂ Enabling Renewables (subcommittee)
  - H₂ Production Expert Panel
  - Feedback on H-Prize

Additional Areas of Interest:
- Manufacturing R&D (subcommittee)
- Feedback on National Lab Initiative
- Opportunities for Energy Systems Integration Facility (ESIF) at NREL
- RFI on financial models/strategies for infrastructure
- Feedback on H-gallon concept
Feedback Requested on RFI

Light Duty Vehicle Hydrogen Fueling Infrastructure Financing Strategies

- Closed: February 28th, 2014
- Seeking feedback from interested stakeholders regarding strategies for a robust market introduction of hydrogen supply, infrastructure, and fuel cell electric vehicles (FCEVs). This input will augment financing strategies that DOE analyzes for public deployment of infrastructure for supporting FCEV introduction in U.S. markets. Such financing strategies should maximize financing, for example, with debt and equity, while minimizing public incentives.

### Rotating Disk Electrode Diagnostics for PEMFC Electrocatalyst Screening

- Rotating disk electrode experiments and best practices for experimental conditions for characterization of the activity and durability of PEM fuel cell ORR electrocatalysts.

### Hydrogen Delivery Technologies

- Hydrogen delivery R&D activities aimed at lowering cost. DOE is requesting comments from interested parties about compression, storage, and dispensing technologies, as well as high-efficiency hydrogen liquefaction technologies.

### Home Hydrogen Refueling Systems and Potential H-Prize Topics

- H-Prize competition for home hydrogen refueling systems to provide supplemental hydrogen for vehicle fueling at single- or multi-family dwellings using common feedstocks. Information regarding individual components but emphasis on complete systems.

### Hydrogen and Fuel Cell Technology Readiness

- Technology validation and deployment activities aimed at ensuring commercial readiness and stimulating commercialization of fuel cell and hydrogen technologies. Information on which hydrogen and fuel cell technologies are ready for technology validation.

### Automotive Fuel Cell Cost and Durability Target

- Proposed cost and durability targets for fuel cells designed for automotive applications. Proposed cost target is $40/kW for automotive fuel cell system cost, and the proposed durability target is 5,000 hours (~150,000 miles).
**FCTO Webinars**

Key Cost-Reduction Opportunities for FCEVs

**FCEV Cost Reduction Pathways**

- **2013 Cost Status (low production):** 39.7 č/mi
  - Fuel Cell: $55/kW → $40/kW
  - Fuel Cell Durability: 150,000 miles
  - Hydrogen Production Cost: $6.00/gge → $4.00/gge
  - H₂ Storage Cost: $3,170 ($17/kWhr) → $1,700 ($10/kWhr)
  - FCEV fuel economy: 51 mpgge → 67 mpgge
  - Annual miles driven: 14,500 mi

- **Fuel Cell Stack R&D (includes R&D to improve durability):** -6 č/mi
  - Fuel Cell Cost: $55/kW → $40/kW
  - Fuel Cell Durability: 150,000 miles

- **Hydrogen R&D (includes production, delivery, storage):** -2.1 č/mi
  - Hydrogen Production Cost: $6.00/gge → $4.00/gge
  - H₂ Storage Cost: $3,170 ($17/kWhr) → $1,700 ($10/kWhr)

- **Manufacturing R&D and Volume:** -7.2 č/mi
  - Manufacturing R&D Assumptions
    - Fuel Cell Cost: $80/kW (@ 30,000 units/yr) → $55/kW
    - H₂ Production: $8.00 → $6.00/gge
    - H₂ Storage: $4,848 (@30,000 units/yr) → $3,170 ($17/kWhr)

- **2020 Cost Target:** 14.4 č/mi
  - H₂ Cost: $3,170 ($17/kWhr)
  - Fuel Cell Cost: $30/kW

- **Ultimate Cost Target:** 9.5 č/mi
  - H₂ Cost: $1,350 ($8/kWhr)
  - Fuel Cell Cost: $30/kW

**Technology Assumptions @ Target**
- Fuel Cell Cost: $55/kW → $40/kW
- Fuel Cell Durability: 150,000 miles
- Hydrogen Production Cost: $6.00/gge → $4.00/gge
- H₂ Storage Cost: $3,170 ($17/kWhr) → $1,700 ($10/kWhr)
- FCEV fuel economy: 51 mpgge → 67 mpgge
- Annual miles driven: 14,500 mi

**Tech Assumptions @ Ultimate Target**
- Fuel Cell Cost: $30/kW
- H₂ Prod. Cost: $2.00/gge
- H₂ Stor. Cost: $1,350 ($8/kWhr)

---

The upper portions represent additional costs assuming a higher platinum cost of $2000/oz. - reductions shown represent R&D of low-Pt catalysts.
Projected high-volume cost of hydrogen for near-term production pathways

- Status of hydrogen cost (production only, does not include delivery or dispensing costs) is shown in vertical bars, reflecting values based on a range of assumptions (feedstock/capital costs).
- Targets for hydrogen cost are shown in circles.
- Targets shown are normalized for consistency in feedstock assumptions and year-cost basis (2007 dollars).
- Targets prior to 2015 are extrapolated based on 2015 and 2020 targets in the FCT Office’s Multi-year RD&D Plan.
- Cost ranges are shown in 2007 dollars, based on projections from H2A analyses, and reflect variability in major feedstock pricing and a bounded range for capital cost estimates.
- Projections of costs assume Nth-plant construction, distributed station capacities of 1,500 kg/day, and centralized station capacities of ≥50,000 kg/day.
Current Status and Hydrogen Delivery Cost Targets

Pathway cost estimated using HDSAM analysis and the following assumptions.
1.) City Size 1.5M
2.) 10% Market Penetration
3.) 750 kg/day (743 gge/day) station size
4.) 700 bar fills from a cascade storage bank
5.) The hydrogen source is a central production facility located 62 miles from the city.

Range of HDSAM projected costs of hydrogen delivery from central production facilities in 2005, 2011, and 2013 along with the relevant targets.

See Fuel Cell Technologies Office Record 13013 for details: http://hydrogen.energy.gov/program_records.html
Accomplishments: 3X increase in tensile strength demonstrated in C-fiber from melt-spun PAN precursor (ORNL)

Launched open source database* on Hydrogen Storage Materials Properties (http://hydrogenmaterialssearch.govtools.us/)

* Included in President’s Materials Genome Initiative, http://www.whitehouse.gov/mgi

Recommended Best Practices for the Characterization of Engineering Properties of Hydrogen Storage Materials

• Projected ~30% cost reduction through lower pressure operation, avoiding C-fiber tanks (HSECoE)
Manufacturing R&D Update for HTAC

Manufacturing Areas of Interest

(1) Manufacturing Competitiveness Analysis - focus on global manufacturing capabilities for hydrogen and fuel cell manufacturing including fuel cells, electrolyzers, hydrogen storage tanks, and steam methane reforming;

(2) Supply Chain Development - analysis of supply chains and approaches to enhance the supply chain for hydrogen and fuel cell products; the use of workshops and exchanges (meetings between suppliers and OEMs) to expand the supply chain are encouraged.

Key Accomplishments:

- NREL: demonstrated in-line QC techniques able to detect defects in web-line speeds of 30 ft/min
- Ballard (AvCarb): Reduced cost & increased throughput of GDLs by 50% & 400%, respectively
- RPI: Demonstrated ability to bond membrane layers in <1 s w/ ultrasonic bonding technique
- Quantum: Reduced cost & weight of Type IV H₂ storage tanks by >15% w/ advanced fiber placement (AFP) manufacturing techniques
Hydrogen and Fuel Cell Technical Advisory Committee (HTAC) Scope

Scope of the committee (from HTAC’s Charter): Review and make recommendations to the Secretary of Energy on:

1. The implementation of programs and activities under Title VIII of EPACT (which authorizes funding for federal RD&D efforts in hydrogen and fuel cells)
2. The safety, economical, and environmental consequences of technologies for the production, distribution, delivery, storage, or use of hydrogen energy and fuel cells
3. The plan under section 804 of EPACT (the DOE Hydrogen & Fuel Cells Program Plan, formerly Hydrogen Posture Plan)
