

Hydrogen Technical Advisory Committee

Table 1 -- Posture Plan Report

Bob Walker, Lead

Observations

- **DOE Posture Plan is an excellent document – given its defined scope and purpose**
- **Limitations of the plan:**
 - **Only addresses the hydrogen and fuel cell program specific to the President’s Hydrogen Fuel Initiative – the transportation-related efforts confined to DOE and DOT**
 - **Plan does not address hydrogen in a broader energy perspective; how it relates to other national energy plans**
 - **Assumes no policy support, and therefore the Plan’s goals, technical targets, and schedules are not reflective of a comprehensive national strategy**

Recommendation

- **HTAC recommend that the Interagency Task Force be tasked to produce a hydrogen National Action Plan:**
 - Reflects the overall policy and priority
 - Covers all Federal department/agency activities
 - Addresses the “limitations” from previous slide
- **HTAC should provide support to ITF in this endeavor, including providing information on commercialization barriers for consideration in the planning**
