DOE Hydrogen Program Panel Discussion

Sunita Satyapal, HFTO; Robert Schrecengost, FECM; Jason Marcinkoski, NE; John Vetrano, SC; Todd Shrader, OCED

Hydrogen Annual Merit Review

June 6, 2022
The U.S. DOE Hydrogen Program Spans Multiple DOE Offices

Hydrogen is a key element of a portfolio of solutions to decarbonize the economy

Hydrogen Program
- Coordinated across DOE
- Focuses on research, development, demonstration, deployment (RDD&D) to address:
  - The entire H₂ value chain from production through end use
  - H₂ production from all resources (renewables, nuclear, and fossil + CCS)

[Diagram: H₂@Scale vision to guide how hydrogen can enable clean-energy pathways across applications and sectors in an increasingly interconnected energy system]

Priorities
- Low cost, clean hydrogen
- Low cost, efficient, safe hydrogen delivery and storage
- Enabling end use applications at scale for impact

Includes workforce development, safety, codes, standards, and EJ priorities

[Website: www.hydrogen.energy.gov]
Coordinated Strategy Across RDD&D

DOE Hydrogen Program:

- Includes more than 400 projects
- More than 200 companies & universities and 15 National Labs
- FY22 Appropriations: >$310M* across DOE
- FY23 Budget Request Hydrogen Crosscut*: $406M
  - EERE: $217.5M
  - FECM: $116M
  - NE: $12M
  - SC: $60.4M

*Final to be updated pending SC, ARPA-E, and final allocations by end of year.

EERE Hydrogen RDD&D Focus Areas and Progress

Focus RDD&D on H₂ from renewables, H₂ storage, delivery, infrastructure, fuel cells, and utilization

Examples of Hydrogen Activities Across EERE

- Coupling H₂ production with renewables (wind, solar, marine, geothermal) [HFTO, WETO, SETO, WPTO, GTO]
- Synfuels production with renewables [BETO, HFTO]
- SuperTruck for heavy duty vehicles [HFTO, VTO]
- Industrial (steel, chemicals) demonstrations and manufacturing RD&D of systems and components for electrolyzers and fuel cells [AMO, HFTO]

Impact Spans Cost Reductions, Innovation and World’s “Firsts”

- Reduced cost by 90% for electrolyzers, 70% for fuel cells, and 30% for hydrogen storage tanks in the last several years and quadrupled durability of fuel cells; enabled commercially viable fuel cell vehicles
- Enabled over 1,200 U.S. issued patents and 30 technologies in the market
- Enabled multiple “firsts” for H₂ and fuel cells—trigen system, airport tugs, parcel delivery vans, backup power, marine application, data center; electrolyzer-grid response; and launch of the American-made hydrogen refueler, safety, codes, and standards, and workforce development

See AMR 2022 Opening Plenary talk at https://www.hydrogen.energy.gov/annual_review.html
Hydrogen Activities in Fossil Energy with Carbon Management (FECM)

Bob Schrecengost, Hydrogen with Carbon Management Division Director (Acting)
FECM - Hydrogen R&D Investments and Areas

**Key Focus Areas:**
- Low-cost, net-zero hydrogen production and utilization technologies, including Turbines, Reversible Solid Oxide Fuel Cells, and Point Source Carbon Capture integrated with Gasification and Reforming Technologies

**Future RD&D:**
- Carbon-Neutral Hydrogen Production Using Gasification & Reforming Technologies – planned awards on SMR/ATR + CCS FEEDs, gasification of mixed waste streams and biomass
- Hydrogen Use for Electricity Generation, Fuels, and Manufacturing
- Large Scale Hydrogen Transport Infrastructure
- Large Scale On-site and Geological Hydrogen Storage – SHASTA program continues

**Recent Accomplishments:**
- Published NETL study “*Comparison of Commercial State-of-the-Art Fossil-Based H₂ Production Technologies*”
- Fossil Energy-based Production, Storage, Transport & Utilization of Hydrogen – made 4 gasification and 6 hydrogen turbine awards in FY21/22
- University Turbines Systems Research — Focus on Hydrogen Fuels – made 6 awards in late FY21
- FEED studies on repurposing existing facilities for clean hydrogen production – 21st Century Power Plants
- Started programs on Methane Mitigation and Repurposing Fossil Assets to lower carbon intensity and costs of clean hydrogen production with carbon-based feedstocks
Advanced Turbines Program

Representative-Scale H₂ Combustion Testing

• Tested at full F-class & advanced gas turbine conditions.
• 100+ hours full can combustor operation with > 90% H₂.
• 20 hrs operation with 100% H₂
• < 3 ppm NOx @15% O₂ at target temp. with N₂ diluent.
• NOx emissions for H₂ fuels likely similar to natural gas emissions that have been demonstrated for full scale combustor geometries.

FY2022 Hydrogen Related R&D Investments

• Hydrogen with Carbon Management:
  • Solid Oxide Fuel Cells – materials, components, systems, reversible SOFC at utility scale;
  • Turbines – 100% H₂ firing, retrofit systems;
  • Gasification and reforming technologies
  • Materials for hydrogen turbines – CMCs

• Point Source Carbon Capture: Pre- and Post-combustion capture (gasification/reforming and industrial decarb.)

• Crosscutting R&D:
  • Energy Storage – large scale materials-based and H₂ storage, grid-scale energy storage;
  • Simulation Based Engineering /Integrated Energy Systems – Modeling and optimization tools for FE and FE-based and IES systems (IDAES)

• 21st Century Power Plants: FEED studies for gasification-based carbon-negative power and hydrogen co-production

Office of Nuclear Energy (NE)

Jason Marcinkoski, Program Manager
Nuclear: Crucial for Clean Energy Mix

U.S. Utility-Scale Electricity Generation by Source in 2020

- Natural Gas: 40%
- Coal: 19%
- Petroleum & Geothermal: <1%
- Biomass: 1%
- Hydro: 7%
- Wind: 8%
- Solar: 2%

NUCLEAR: 20%

U.S. Sources of Emissions-Free Electricity in 2020

- Nuclear: 52%
- Wind: 22%
- Hydro: 19%
- Solar: 6%
- Geothermal: 1%

Source: U.S. Energy Information Administration
Firm, Flexible, Zero-Carbon Grid Capacity

Transportation Fuels
Steel Production
Fertilizer / Ammonia
Polymers/ Chemicals
Hydrogen

Flexible generation enables more renewable power to the grid

Flexible Reactor Siting
Data centers
Manufacturing plants
Biofuel plants/processing
Desalination
Industrial parks/plants
Fueling Stations

Flexible Scale Reactors

Thermal Storage
Peaking Generator
Primary Generator
Industrial/Chemical Plant

Battery

CO₂ / Carbon Sources
- Ethanol plants
- NG generators
- Cement plants
- Biomass
- Polymer/Chemical Waste

U.S. DEPARTMENT OF ENERGY
Office of NUCLEAR ENERGY
ADVANCED NUCLEAR TECHNOLOGY

Office of
NUCLEAR ENERGY
Nuclear-H₂ production demonstration projects

• Constellation (Exelon): Nine-Mile Point NPP
  - 1 MWe Low Temperature Electrolysis (LTE)
  - Using “house load” power
  - H₂ production beginning ~October 2022

• Energy Harbor: Davis-Besse NPP
  - 1-2 MWe LTE
  - Power provided by completing plant upgrade with new switch gear at the plant transmission station
  - H₂ production beginning ~2023/24

• Xcel Energy: Prairie Island NPP
  - 150 kWe High Temperature Electrolysis (HTE)
  - Engineering planned for tie into plant thermal line
  - H₂ production beginning ~Q1 2024

• APS/PNW Hydrogen: Palo Verde Generating Station
  - 15-20 MWe LTE H₂ production, ~6-8 tons H₂/day
  - H₂ storage + H₂ to gas peaking turbines (50%), syngas pilot
  - H₂ production expected 2024 (Award still under negotiation)

In collaboration with HFTO, EERE
Hydrogen Research in Basic Energy Sciences (SC)

John Vetrano, Technology Coordination Program Manager
Hydrogen and Fuel Cell Underpinning Science in SC-BES

- Fundamental chemical and materials sciences research to advance understanding and transformative approaches for hydrogen generation and use

- Research topics include
  - **Discover, design, and synthesize advanced materials** including catalysts for chemical conversions, membranes for separation, purification and ion transport, photoelectrodes for solar hydrogen production, and novel materials for hydrogen storage.
  - **Understand chemical and biochemical mechanisms, leading to their design and control**, for efficient and selective chemical and biochemical processes such as reactions, separations, ion/molecular transport, molecular update/release.
  - **Advance experimental and computational tools, including AI/ML**, to accelerate discovery and increase understanding of fundamental chemical, materials, and biological processes.

- Annual solicitations applicable for basic research in these areas include the “open” annual SC FOA. FOAs focused on special topics (e.g., Energy Frontier Research Centers, etc.) can also be relevant to hydrogen research.

- At the core of SC-BES strategic planning are reports from “Basic Research Needs” workshops and roundtables (e.g., 2003 Hydrogen Economy; 2017 Catalysis Science; 2019 Liquid Solar Fuels). In 2021, SC-BES held a hydrogen-focused roundtable to explore new science opportunities to advance hydrogen technologies.

- Two BES-sponsored presentations Wednesday at 3:30 in the Interagency Session
Discover and Control Materials and Chemical Processes to Revolutionize Electrolysis Systems

• How do we co-design multiple components that work together to enable stable, efficient electrolysis for the carbon-free production of hydrogen from water?

Manipulate Hydrogen Interactions to Harness the Full Potential of Hydrogen as an Energy Carrier

• How do we acquire fundamental insights across the entire range of energies to allow selective tuning of hydrogen interactions with molecules and materials?

Elucidate the Structure, Evolution, and Chemistry of Complex Interfaces for Energy and Atom Efficiency

• How can co-existing and evolving interfaces be tailored at multiple length scales to achieve energy-efficient, selective processes and enable carbon-neutral hydrogen technologies?

Understand and Limit Degradation Processes to Enhance the Durability of Hydrogen Systems

• How do we identify and understand the complex mechanisms of degradation to obtain foundational knowledge that enables the predictive design of robust hydrogen systems?

Roundtable Brochure published on BES website on Hydrogen Day (10-08-2021); Report, Brochure & Technology Status Document available at: https://science.osti.gov/bes/Community-Resources/Reports
SC User Facilities Have Important Roles in Hydrogen Research

- Advanced Scientific Computing Research leadership class computers cross many disciplines to accelerate transformative progress
- Biological and Environmental Research user facilities bring bioanalytical instrumentation, genomic sequencing, and systems biology tools for innovative approaches for biological hydrogen generation
- Basic Energy Sciences light, neutron, and nanoscience facilities provide advanced synthesis and characterization to enable next-generation energy technologies

Strong collaboration between SC-BES User facilities and hydrogen-related consortia have resulted in joint publications in high-impact, peer reviewed journals.
FY 2023 SC Energy Earthshot Initiative (+$104M)

- Addresses key research challenges at the interface between basic research and applied research and development activities to bridge the R&D gap and realize the stretch goals of the DOE Energy Earthshots
- BES, with other SC Offices, will initiate a new research modality of Energy Earthshot Research Centers (EERCs)
  - Modeled on the Energy Frontier Research Centers, BES will support large teams that are multi-investigator, multi-disciplinary, and multi-institution (academic, national laboratory, industrial) to advance foundational knowledge and enabling capabilities in experimental and computational chemical and materials sciences to address Energy Earthshot goals
  - BES will coordinate closely with the Energy Technology Offices and existing research consortia/demonstration projects, to establish teams that span the R&D continuum and accelerate both science and technologies – providing a strong bridge between BES and technology research
- BES will complement EERCs with small group awards
  - Focus on use-inspired fundamental research to address knowledge gaps that limit achievement of the Energy Earthshot goals
Hydrogen Activities in Office of Clean Energy Demonstrations (OCED)

Todd Shrader, Deputy Director for Project Management
OCED Mission and Key Tenets

• **Mission:**
  – Deliver clean energy demonstration projects at scale in partnership with the private sector to launch or accelerate market adoption and deployment of technologies
  – Support the equitable transition to carbon-free electricity by 2035 and a net-zero economy by 2050

• **Key Tenets of Federally-Supported Demonstration Projects:**
  – Are a pathway to technical and commercial risk reduction and learning to make projects commercially viable by addressing technology challenges and driving down cost curves
  – Must target relevant operational environments, scales, and timeframes to validate the performance, cost, and value
  – Should enable downstream market adoption and deployment to accelerate scale-up leading to greenhouse gas reductions, job creation, and achieving environmental justice priorities
  – Involve substantial risk and the known and unknown risks factors will impact project outcomes
OCED Role Across Research, Development, Demonstration & Deployment (RDD&D) Continuum

- **Basic and applied research & experiments** (TRL 1-3)
- **Development & lab-scale prototyping** (TRL 4-5)
- **Pilot, sub and full-scale demonstration** (TRL 6-7)
- **Commercial-scale demonstration** (TRL 8)
- **At-scale long term commercial operations** (TRL 9)

**Technology Readiness Level (TRL)**

**RDD&D Steward**

Office of Technology Transitions (OTT)

**U.S. DEPARTMENT OF ENERGY**
Scope of OCED in the Bipartisan Infrastructure Law

- Regional Clean Hydrogen Hubs ($8 billion)
- Carbon Capture Demonstrations ($2.5 billion)
- Carbon Capture Large-Scale Pilot Projects ($937 million)
- Industrial Emissions Demonstrations ($500 million)
- Clean Energy Demonstrations on Mine Lands ($500 million)
- Energy Improvement in Rural and Remote Areas ($1 billion)
- Energy Storage Demonstration and Pilot Grants ($355 million)
- Long Duration Demonstration Initiative and Joint Program ($150 million)
- Upgrading Grids Demonstrations ($5 billion)
- Advanced Reactor Demonstrations ($2.5 billion)
Thank you!
